Home Connection

TM

by William Shaw of microseeds, inc.

Home Connection is a communications package that lets you use your computer and modem more efficiently by saving you time and money. Use the editor in **Home Connection** to compose and edit messages and letters before connecting to networks or other computers. You save valuable billed time from most networks and phone charges.

Or use **Home Connection** to "record" conversations, market prices, newspaper or magazine articles, letters, or notes in its huge RAM memory area, then save the information to disk, or print it to a printer after you've hung up.

With **Home Connection**, you can edit and transfer any text file to another computer . . . or quickly transfer (with complete error-checking) ANY type of Apple file. Basic programs, machine language programs, or data are easily transferred to anyone else using **Home Connection** or a compatible program with their Apple.

For convenience, just enter the phone numbers you have your computer call frequently in the phone list. If you have an autodial modem, just tell the

computer who you want to call. It will find the number and dial by itself!

Home Connection works with any Apple II series computer (Apple II, Apple II Plus, Apple IIe, and Apple IIc) with almost any modem and/or serial card.

If your computer allows, **Home Connection** can use lower case and 80 columns. Incoming information or outgoing text can be automatically translated to upper case if one computer does not have lower case capabilities.

You can set **Home Connection** to operate with any computer by altering all kinds of transfer parameters, baud rates (from 50 to 4800 baud), duplex, start and stop bits, and parity. Of course, the most common configurations are handled automatically, so you don't need to know a start bit from a stop bit . . . you just tell **HC** the type of modem you have!

Oh, yes, and since **Home Connection** is another applications software program from Penguin Software, it's unprotected and copyable so you can make your own backups and keep your master safe!

ABOUT THE AUTHOR

Bill Shaw is an experienced computer engineer, currently working with digital imaging and signal processing. Previously, he had also worked in research and development of electronic games and toys for a toy company. **Home Connection** started with Bill's need to transfer data between an Apple and a Vax, and evolved from there to a complete communications package — with the help of David Wenzler and microseeds, inc.

ABOUT CompuServe

With the \$15 FREE CompuServe connect time included in this package, you can make use of **Home Connection** right away. **CompuServe** is an information service which will bring you fascinating, practical news; up-to-date financial reports and assistance; telecommunications abilities; hands-on learning experiences . . . and plain old-fashioned enjoyment!
