

## Appendix I

### International Versions

International versions of the Apple IIe have two sets of keyboard characters their users may choose between. One set, known as the *USA character set*, is the standard Apple IIe character set described in Chapter 2 of this manual. The other set, known as the *alternate character set*, is a special set of characters designed to meet the needs of various international users. This appendix describes the layout of the various international keyboards when the alternate character set has been selected. A layout drawing and a table of character codes generated by the keyboard are provided for each version described in this appendix. You should note, however, that only the ASCII codes that are different from those in the USA set are defined in the tables; where a keyboard does not generate any different codes, no table is provided. Figure I-1 is a schematic diagram of the international circuit board.
