We turn Apple®owners into Apple users. For only \$6.65 a month.

A subscription to Softdisk brings you two 514" disks*, chock-full of great programs for your Apple® II (c, e, +, GS) each month for just \$6.65.

Learn all the capabilities of your Apple II.

Softdisk takes you beyond the two or three programs you bought for your Apple II. Without spending a fortune, Softdisk will introduce you to new software you can use each month. You will get AppleWorks™ templates, spread sheets, accounting applications, graphics, educational programs and specialized utilities that make your Apple II easier to work with. There are even some terrific games as a bonus.

Softdisk programs are original software, not public domain, so vou will build a quality software collection as you learn. Each month you will sharpen your computing skills and become a smarter software buyer. You just can't buy better computing experience.

Contents of Issue #84 (Available as a back issue)

Thousand-Year Date Book-Keep track of important appointments.

Li'l Black Book—AppleWorks" template that helps you keep track of names, addresses and phone numbers.

Print Shop" Graphics—Flags from all over the world.

Plus 8 more great programal

FREE SOFTWARE with your order.

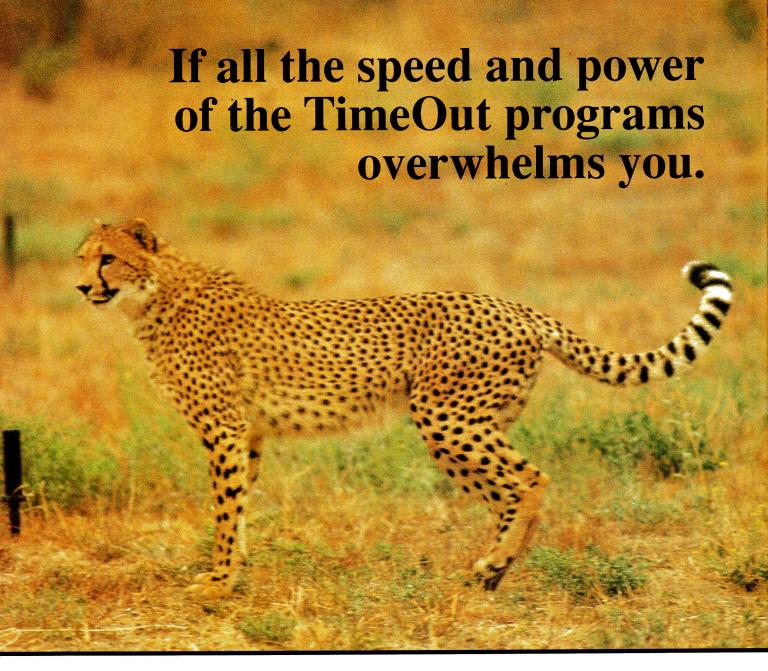

Try Softdisk for six months for only \$39.95. As a bonus, we will send you FREE-200 Print Shop™ Graphics Vol. 4 for use with Brøderbund's Print Shop™ program.

Money-back guarantee.

If you are not satisfied with your purchase for any reason, return your first issue for a full refund. The 200 Print Shop Graphics are yours to keep. You can't lose, so order today!

The Cheetah: a powerful, finely-tuned and well developed creature; its swiftness and agility only matched by its ability to overwhelm any object in its path. This graceful animal darts across the terrain with a fluid and seemingly effortless strength.

The TimeOut enhancements add power, speed and productivity throughout AppleWorks. They're fast. Faster than any other AppleWorks enhancements on the market. And they're

powerful.

But don't let this overwhelm you. As powerful and swift as TimeOut enhancements are, underneath they are easy to use and backed by an unusually friendly and loyal group of people. We stand behind every product we sell with a moneyback guarantee and a team of customer service and technical support personnel to answer any questions you may have.

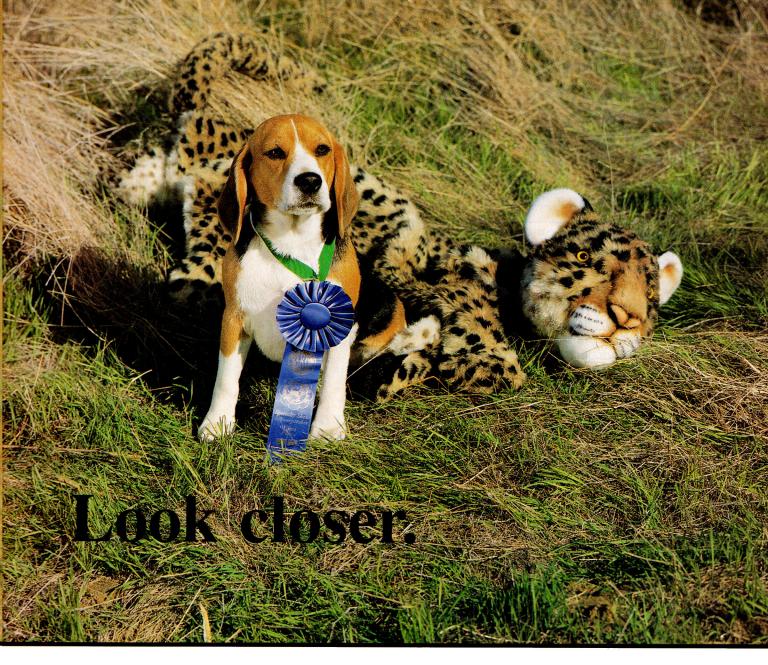

So don't be afraid to take a closer look. All of our software programs are so well

integrated within AppleWorks, you would think they had always been there. You are guaranteed a winning combination that has no equal in the Apple II market.

And it doesn't stop there. We are continually striving to upgrade and improve our software to meet the challenging needs of today's market. Included in our TimeOut series are these powerful enhancements to AppleWorks.

TimeOut QuickSpell catches spelling errors in record time from inside AppleWorks. It checks for spelling errors 50 times faster than the nearest competition. It also automatically finds double words and lets you add "unknown" words to a custom dictionary for future reference.

TimeOut SuperFonts produces Macintoshquality Word Processor output and allows you to use a variety of fonts and sizes. Use any combination of styles including plain text, bold, outline, italic, subscript, superscript, underline, shadow and negative. You can insert graphics into

your Word Processor documents. And, with the paint application that we've included, creating and touching up graphics is a breeze.

TimeOut Graph quickly produces outstanding looking graphs to enhance your spreadsheets. Present your data in nine different graph styles including Bar, Stacked Bar, Line, Pie, Exploded Pie, XY (scatter), Area, Hi-Lo and Point. It also features automatic and manual axis scaling and a variety of fill patterns. And, customizing graphs is quick and easy with the paint application we've included.

TimeOut SideSpread rotates your spreadsheets 90 degrees, enabling you to print

them sideways. It allows printing of the entire spreadsheet or any portion.

Look for these and other TimeOut products at your local dealer. If they don't have them, tell them to get on the stick.

So what are you waiting for?

Unleash the Power.

The IIGS just got up to speed.

TransWarp GS,™ Applied Engineering's new accelerator for the IIGS, is shipping now.

Employing the latest surface-mount technology. Incorporating not two, but five layers of circuitry. Meet the most technologically advanced board we've ever produced. TransWarp GS.

With it, your IIGS rips along at 7 MHz, compared to it's native 2.8. The difference isn't merely noticeable, it's astounding. Pull-down menus fly open, folders leap off the finder, screens change in an eyeblink. Your IIGS feels like a color Mac...it's an entirely new computer environment!

Full compatibility.

Completely compatible with all standard hardware and software, TransWarp GS has been extensively

More than twice as fast—that's computing at TransWarp speed!

tested by all the major publications and by Applied Engineering.

So complicated, it's simple.

Plug in one connector, then insert TransWarp GS into slot 3 or 4 (the board won't override either slot's function), set your control panel and prepare yourself for warp speed.

Switching back to normal (or merely fast) speed is as easy as accessing the control panel. And in the future, when even faster microprocessor chips become available, you'll be able to switch-out chips inexpensively.

From AppleWorks GS to Zany Golf,

TransWarp GS transforms the IIGS into the computer we all knew it could be.

TransWarp GS Accelerator \$399 Order Today!

To order or for more information, see your dealer or call (214) 241-6060 today, 9 am to 11 pm, 7 days. Or send check or money order to Applied Engineering. MasterCard, VISA and C.O.D. welcome. Texas residents add 7% sales tax. Add \$10 outside U.S.A.

THE FINANCIAL POWER YOU NEED TO SUCCEED ...MADE SIMPLE.

Andrew Tobias' Managing Your Money gives you the tools you need to make better financial decisions.

And it's surprisingly easy to learn and use.

Now over a quarter of a million users rely on Managing Your Money for mastery over their personal or business finances.

Managing Your Money gets you organized. It keeps you on track. It helps you make the hard decisions with complete knowledge and a new sense of confidence. What's more, Managing Your Money saves bookkeeping time and earns you the extra dollars that come with better financial management.

But perhaps best of all, Managing Your Money is written by Andrew Tobias in a straightforward, easy-to-understand style that demystifies finance. You don't have to be a business school graduate or a computer wiz to use and enjoy the financial power of Managing Your Money - you probably won't even need the manual.

"Considered by computer industry experts to be one of the best all-around programs ever written, it's easy to use even if you're a novice at computer technology and personal finance."

INCIDER'S VIEW

East-Coast WIMPs

by Dan Muse, Editor in Chief

ur magazine's editorial offices in Peterborough, New Hampshire, are about as far away from Apple headquarters as you can get without leaving the country. The 3000-mile distance doesn't keep us from tracking down information on new Apple products, though. And as we put out this issue of *inCider* in the dead of a New England winter, there's not much else to do but ski, skate, and speculate on the next Apple II.

As we anticipate a new IIGs, the biggest question we're asking is how much like a Macintosh will it be. In addition to rumors of a new GS in the spring, we hear talk about a low-end K-12 Macintosh in the fall—we wonder how much like an Apple II it will be

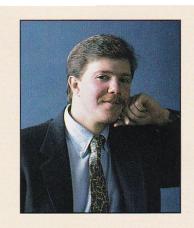

like an Apple II it will be.

The lines are blurring between Apple's two computers. The lines are still there, and they're blurrier on the hardware side than on the software side, but they are blurring. You still can't run Apple II software on a Mac, or Mac software on a II. You can convert files easily, though.

Depending on how you look at things, you could draw two different conclusions. Cynics—a category we admittedly fall into from time to time—see a plot to bring death to our dear companion, the Apple II. Pragmatists, on the other hand, will argue that Apple II users have benefited from Macintosh development and vice versa, so there's nothing to fear.

In last month's Letters section (p. 12), two inCider readers took exception to comments directed at the Macintosh. Shelly Lisoskie of Lynnwood, Washington, was upset by The Road Apple's motto, Sack the Mac. "Don't Apple II users realize there was once an Apple I?" she asks.

Martin Lavoie of Montreal objected to

"Apple IIs have benefited from Mac development, so there's nothing to fear."

a tongue-in-cheek riddle asking what you call a person who use windows, icons, mice, and pull-down menus. WIMP was the answer, to which Martin responded, "WIMP was the word, but don't IIc owners, GS owners, and now IIe owners use window, icons, mice, and pull-down menus?" We thought it was cute, but the point that the II line has benefited from the Mac is valid.

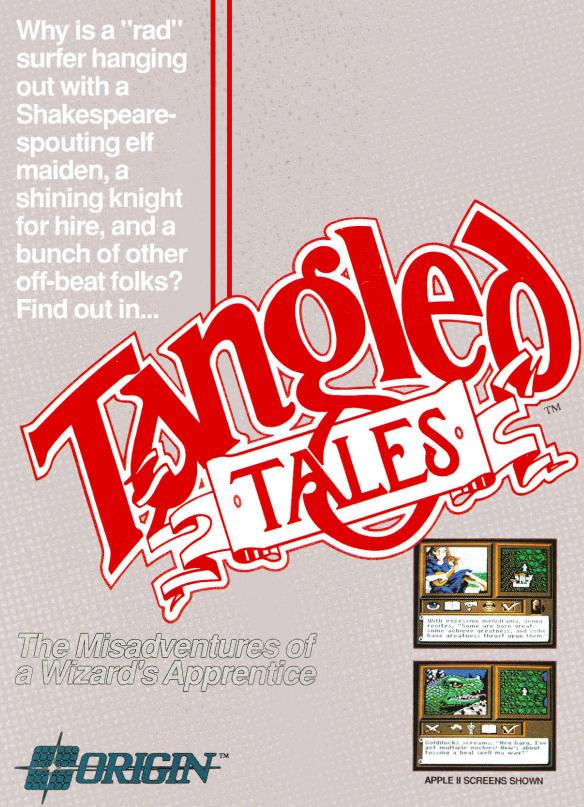

The familiar Apple interface for software, which gained popularity because of the Macintosh, is now a standard for GS software as well as many programs for 8bit Apple IIs.

Not everyone agrees, however, on whether or not that's a benefit. Many Apple II owners believe the AppleWorks file-card interface is the true standard for Apple II software. After all, AppleWorks is used by more than a million II users, Beagle Bros has capitalized on the AppleWorks interface to build a strong line of add-on products, and several other companies have produced popular products that adhere to the AppleWorks interface.

Even if you don't like the point-andclick approach to software, it's difficult to argue that the biggest gift Apple II users can thank the Macintosh for is hardware. Apple's printers, disk drives, and modems work with both the II and the Mac. Apple wouldn't have developed a laser printer, a local-area network, or a CD-ROM drive just for the Apple II. Also, because Macs have SCSI built in and you can buy an Apple SCSI card for your He or GS, third-party companies that make SCSI hard-disk drives for the Macintosh have an Apple II product automatically. The availability of laser printers and local-area networks has increased the life span of the II by helping it get into markets that Apple hasn't traditionally targeted for the II-namely business.

How has the Apple II helped the Macintosh? The continued success of the line reminds Apple how important expandability is. Look at the Macintosh II—expansion slots, color, modularity (keyboard, monitor, drives). The key ingredient of the Apple II—unlimited potential—went into the design philosophy of the Macintosh II.

We're learning to overcome Mac envy. We're adjusting to the fact that as the II line evolves, it will survive by incorporating Mac-like features while clinging to its own strengths. Even though we're surviving another cruel New England winter, I guess we're turning into WIMPs after all.

Coming in March to your favorite software retailer for Apple II and Commodore 64/128!

Not available at your local retailer? Call 1-800-999-4939 (8am to 5pm EST) for VISA/MC orders; or mail check/money order (U.S. \$) to ORIGIN, 136-B Harvey Road, Londonderry, NH 03053. All versions \$29.95. Allow 1-2 weeks for delivery.

LETTERS

Shareware Beware

I think readers should know about an unfortunate experience I had with a shareware developer. After a friend gave me a copy of Disk Disintegrator Deluxe, I sent a \$29.95 check to its author, Logix Innovations, in Quebec. Two weeks after mailing the check, I received a letter stating that the author received my order, but the commercial version of this software wasn't available yet. The letter also stated that I'd receive D.D. Deluxe v. 4.3 within three to four weeks and that Logix wouldn't cash my check until it shipped my order.

My check cleared two months later. After another two months I wrote again, inquiring about the software. To date, I haven't received the software or an answer to my letter.

We should be aware of the risk we take in sending money to a shareware author; there's no guarantee we'll receive the software.

Phyllis E. Delph 7414 Oakmont Drive Santa Rosa, CA 95409-6306

Order through our Shareware Connection, and you won't get cheated (ad, p. 98).—eds.

Sad Eyes

I'm quite fond of typing in inCider's programs, but you printed GS BASICs' game of Life ("Life Goes On," October 1988, p. 78) in such small letters that it's impossible to read. The same problem occurred in "Labyrinthian Caverns" (Applesoft Adviser, December 1988, p. 86).

Martin A. Townsley 644 Highway 98W Destin, FL 32541

I'm a computer teacher and was excited to read "Amazing Mazes" (Applesoft Adviser, November 1988, p. 96). It's a perfect application for my second-semester BASIC class. The listing's print

is so small, though, I couldn't read it well enough to type it in. I hope this isn't going to become standard practice.

Marilyn Hogue 5301 Aspenknoll Court Cincinnati, OH 45230

What—no magnifying glass? We're sorry so many of you had difficulty reading the program listings in the previous issues. We goofed. We wanted to run the listings smaller to save space, but weren't farsighted enough to see the problems it would create. If you'd like copies of these listings in a readable size, send us a self-addressed envelope. —eds.

Inching Along

In October's AppleWorks Q&A, (p. 74) Brooks Weisblatt stated he can't print four characters per inch with his Image-Writer II. You responded that the printer can print only 9, 10, 12, 13.4, 15, or 17 cpi. I have no trouble printing the desired characters per inch by going to the Printer Options menu and selecting CI and the proper number. What's the problem?

Jack L. Oxley 4649 Twin Post Road Dallas, TX 75244

The problem is that in Cider believed the docs and not the facts. Sorry. —eds.

Proper Coverage

Since your initial review of Applied Engineering's PC Transporter (June 1988, p. 77), I've seen no mention of it in your magazine. PC Transporter is a unique device that makes the Apple II very powerful, and I'd hoped you'd continue covering this fantastic product.

Transporter is much more powerful than a PC clone, but because its manual isn't straightforward or well written, its capabilities go unnoticed. AE could have written an installation manual and a separate user's guide instead of combining all the informaton into one manual.

Apple magazines should be explaining how to use ProDOS devices with Transporter and what software works with it.

Randall S. More II HHC, 32nd Signal Battalion Box 73 APO NY 09757

We reviewed PC Transporter because it's a product for your Apple II. Because we're not an MS-DOS magazine, though, we're reluctant to devote much regular space to a product that is in effect a PC clone. What do you think? Let us know whether or not you want more coverage of PC Transporter in inCider. —eds.

On the Radio

Why doesn't inCider ever mention software that can aid amateur radio operators in either upgrading or in communications? Other publications advertise IBM- and Commodore-compatible software and hardware, but no one mentions Apple. Does this mean the Apple-owner ham must break down and purchase an IBM or Commodore?

Jim Campbell 711 North Columbia Avenue Campbellsville, KY 42718

We're afraid so—as far as we know, no radio software is available for the Apple II. We wish there were and we wish someone would tell us about it if there is. —eds.

Foreign Image

In "GS Over There" (Apple Clinic, November 1988, p. 22), Bill Kennedy wrote that generally you can use only the international version of the ImageWriter II overseas. That information, however, doesn't correspond to my experience here in Germany.

I'm using two ImageWriters—both standard 110/60 stateside models. I brought the ImageWriter I from home and purchased the ImageWriter II at our PX. Neither printer has had a problem running from a 220/110 transformer at 50 hertz.

Robert Van Epps c/o Bamberg Elementary School APO NY 09139-0005

Abracadata Update

If you purchased or received a copy of Abracadata's Design Your Own Home/Architecture program between October 18 and December 12, 1988, the company encourages you to examine your 51/4inch disk for a possible defect (31/3inch disks are unaffected). To check for the error, use your mouse to go to the line icon, then try pressing Control-N (to turn off measurements) or the tab key (to show feet and inches). If the software responds immediately, your disk is okay. If the response is erratic or delayed, you'll need a new disk. (If you're not using both the mouse and the 51/4-inch version, you shouldn't experience any problem.) To get your free replacement, send your protected 51/4inch disk only to Abracadata Ltd... P.O. Box 2440, Eugene, OR 97402.

CORRECTION

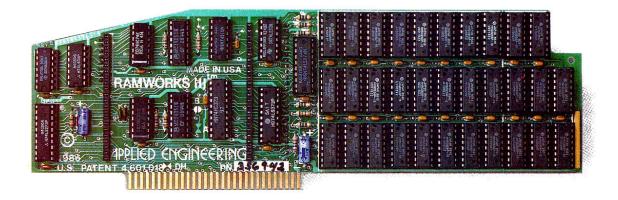

Formula 10 in our January 1989 AppleWorks in Action spreadsheet tutorial (p. 60) contains an error. The description should read: @CHOOSE (G4, J9, J10, J11, J121. 🗆

inCider welcomes readers' comments. We reserve the right to edit letters for clarity, style, and space. Please address your correspondence to Letters, inCider, Elm Street, Peterborough, NH 03458.

RamWorks[®] III

Patented Performance from the Recognized Leader

The Best Selling, Most Compatible, Most Recommended, Most Expandable Card Available.

The AppleWorks Amplifier.

While RamWorks III is recognized by all memory intensive programs, NO other expansion card comes close to offering the multitude of enhancements to AppleWorks that RamWorks III does. Naturally, you'd expect RamWorks III to expand the available desktop, after all Applied Engineering was a year ahead of everyone else including Apple in offering more than 55K and we still provide the largest AppleWorks desktops available. But a larger desktop is just part of the story. Look at all the AppleWorks enhancements that even Apple's own card does not provide and only RamWorks III does. With a 265K or larger RamWorks III, all of AppleWorks (including printer routines) will automatically load itself into RAM dramatically increasing speed by eliminating the time required to access the program disk drive. Switch from word processing to spreadsheet to database at the speed of light with no wear on disk drives.

RamWorks eliminates AppleWorks' internal memory limits, increasing the maximum number of records available from 1,350 to over 22,000. *Only* Ram-Works increases the number of lines permitted in the word processing mode from 2,250 to over 22,000. *Only* Ram-Works expands the maximum clipboard limit from 250 to 2,042 lines. And *only* RamWorks offers a built-in printer buffer, so you won't have to wait for your

printer to stop before returning to AppleWorks. And auto segments large files so they can be saved on two or more disks. You can even have Pinpoint or MacroWorks and your favorite spelling checker in RAM for instant response.

RamWorks, <u>nothing</u> comes close to enhancing AppleWorks so much.

The Most Friendly, Most Compatible Card Available.

Using RamWorks III couldn't be easier because it's compatible with more offthe-shelf software than any other RAM card. Popular programs like AppleWorks, Pinpoint, TimeOut series, HowardSoft, FlashCalc, ProFILER, Managing Your Money, SuperCalc 3a and VIP Professional to name a few (and most hardware add on's like ProFile and Sider hard disks). RamWorks is even compatible with software written for Apple cards. But unlike other cards, RamWorks plugs into the IIe auxiliary slot providing our super sharp 80 column text (U.S. Patent #4601018) in a completely integrated system while leaving expansion. slots 1 through 7 available for other peripheral cards.

RamWorks III is compatible with all Apple IIe's, enhanced, unenhanced, American or European versions.

Highest Memory Expansion.

Applied Engineering has always offered the largest memory for the IIe and RamWorks III continues that tradition by expanding to 1 full MEG on the main card using standard RAMs, more than most will ever need (1 MEG is about 500 pages of text)...but if you do ever need more than 1 MEG, RamWorks III has the widest selection of expander cards available. Additional 512K, 1 MEG, or 2 MEG cards just snap directly onto RamWorks III by plugging into the industry's only low profile (no slot 1 interference) fully decoded memory expansion connector.

It Even Corrects Mistakes.

If you've got some other RAM card that's not being recognized by your programs, and you want RamWorks III, you're in luck Because all you have to do is plug the memory chips from your current card into the expansion sockets on RamWorks to recapture most of your investment!

The Ultimate in RGB Color.

RGB color is an option on RamWorks and with good reason. Some others combine RGB color output with their memory cards, but that's unfair for those who don't need RGB and for those that do. Because if you don't need RGB Applied Engineering doesn't make you buy it, but if you want RGB output you're in for a nice surprise because the RamWorks RGB option offers better color graphics plus a more readable 80 column text (that blows away any

composite color monitor). For only \$129 it can be added to RamWorks giving you a razor sharp, vivid brilliance that most claim is the best they have ever seen. You'll also appreciate the multiple text colors (others only have green) that come standard. But the RamWorks RGB option is more than just the ultimate in color output because unlike others, it's fully compatible with all the Apple standards for RGB output control, making it more compatible with off-the-shelf software. With its FCC certified design, you can use almost any RGB monitor because only the new RamWorks RGB option provides both the new Apple standard analog and the IBM standard digital RGB outputs (cables included). The RGB option plugs into the back of RamWorks with no slot 1 interference and remember you can order the RGB option with your RamWorks or add it on at a later date.

like the product so much that I am magazine said "RamWorks is the most powerful auxiliary slot memory card available for your IIe, and I rate it four stars...For my money, Applied Engineering's RamWorks is king of the hill."

"I wanted a memory card for my Apple that was fast, easy to use, and very compatible; so I bought RamWorks"

Steve Wozniak, the creator of Apple Computer

Apple experts everywhere are impressed by RamWorks' expandability, versatility, ease of use, and the sheer power and speed that it adds to any IIe.

buying one for my own system." inCider

 Powerful linear addressing 16 bit coprocessor port

Can use 64K or 256K RAMs

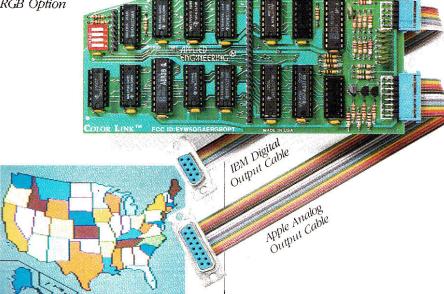

- Automatic AppleWorks expansion up
- to 3017K desktop
- Accelerates AppleWorks
- Built-in AppleWorks printer buffer
- 100% compatible with all standard IIe
- RamDrive™ and ProDrive™ the ultimate emulation software included free
- Memory is easily partitioned allowing many programs in memory at once
- Compatible RGB option featuring ultra high resolution color graphics and multiple text colors with cables for both the new Apple and standard IBM type monitors
- Self diagnostics software included
- Lowest power consumption (U.S. Patent #4601018)
- Takes only one slot (auxiliary) even when fully expanded
- Socketed and user upgradeable
- Software industry standard
- Advanced Computer Aided Design
- Used by Apple Computer, Steve Wozniak and virtually all software companies
- · Displays date and time on the Apple-Works screen with any ProDOS compatible dock
- Much, much more!

by Paul Statt, Senior Editor

NATIONAL SCIENCE

The National Science Foundation will introduce science and math teachers to computers in the classroom this summer at its Project ExCELS workshop, to be held at Indiana University of Pennsylvania near Pittsburgh.

High-school science teachers will learn how to connect their microcomputers to the "real world"—the important art of computer interfacing. Conference participants will take home an interface board, software, sensors, and electronic components to set up experiments.

The math teachers (grades 2-12) will receive, in addition to two weeks' training, math software created by the Ex-CELS project and \$2000 worth of commercial software to use at home. Everybody at

the program will also learn to telecommunicate by modem.

Project ExCELS runs from June 26 through July 14 and is free (excluding transportation) to accepted participants. The application deadline is March 15, 1989; contact John W. Butzow or LeeAnn Schlemmer at the College of Education, 104 Stouffer Hall, Indiana University of Pennsylvania, Indiana, PA 15705, (412) 357-2480.

A GOOD OLD COMPUTER

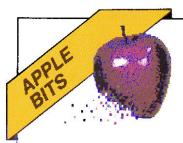

The New York man always seemed hopelessly behind the times. In college, he still had something called a record player when everyone else was buying a hi-fi. When he finally bought a hi-fi, he learned to his dismay that it was monaural when everyone else had stereo.

Now he has upgraded his sound system (the one that finally replaced his old hi-fi) by adding a compact-disc player. But the first time he showed it off to friends, someone remarked at the irritating brittleness of CD sound, and someone else said she couldn't wait for digital audio tape.

Personal computers produced special anxiety. The man works as a writer, one who makes a lot of typing errors, and he found himself increasingly embarrassed to turn in typed manuscripts splotched with erasures and White-Out. Other people he knew produced pristine copy from computers. A few had forsaken paper altogether and submitted their work on disks, or over the phone by modem.

A major writing project forced the issue: He needed a computer. But he remained hopelessly intimidated by the thought of buying one—he couldn't even understand the advertising. A friend finally came to his rescue with the loan of a castoff Apple. The writer spent a weekend learning about the keyboard, the dot-matrix printer, and the old writing program, and

PRODUCT UPDATES

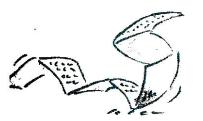

Experimental (\$379), teaches "methods of artificial intelligence" and much more with your Apple II Plus, IIe, or IIGS.

•Data East (San Jose, CA)-Karate Champ, Kung Fu Master, and Com-

mando-has joined up with sports-software pioneer Scott Orr, founder of GameStar (GFL Football, GBA Basketball, and Championship and Star League Baseball). Looks like a good blend of action and strategy.

• Facts on File (New York, NY) has shipped the first Apple CD-ROM product: Public Domain Software on File, almost 200 good, tested programs for all Apple IIs for only \$195. Call (800) 322-8755, (212) 683-2244 in New York, Alaska, or Hawaii, or (416) 441-2992 in Canada.□

found he liked them. When he called offering to buy the Apple, his friend was patronizing: "I couldn't take any money for it. I'm just glad it's found a good home. It's so old and

primitive. I don't think it has any value any more."

No value? The writer, working happily with 5.25inch floppy disks, wondered what his friend could have meant. He decided that ages of computers, in a time of accelerating high tech, are calculated like dogs' ages, multiplying each year by seven. Thus his Apple might be thought of as more than 40

years old, easy to dismiss as worthless.

But the writer, also over 40, has come to understand how much value may still be found in the serviceable victims of premature obsolescence. Let his friends spend thousands on their baffling 60-megabyte hard-disk systems or spiffy laptops that store huge memories on the trim new 3.5-inch disks. Let them warn that his 5.25-inch floppies are going the way of the old 45-r.p.m. records.

So what, he says, with an affectionate eye on the out-ofdate Apple. Those 45s sounded good enough on his old record player as he listened to the doo-wop music of his youth, and he still has a box of them in his closet.

APPLE LIBRARY **GROUP MEETS**

inCider wasn't there and probably it's just as well. At its meeting in New Orleans, Louisiana, last June, the Apple Library User Group, according to its newsletter, discussed the Apple II often:

- The Academic Libraries group heard about "the transition from the Apple II to the Macintosh in [the] music library."
- •The Desktop Publishing

group expressed "frustration at making the transition from Apple IIe to Macintosh, and [the wish] that Apple would make the transfer of text and data simple...."

•The Macintosh group noted that "libraries with a heavy investment in the Apple II series ... are particularly concerned over migrating to the Macintosh line in some other fashion than through telecommunications links."

It might seem that the "transitions" and "migra-

tions" would be easier if librarians simply continued to use their Apple IIs, but "most users were reporting on Macintosh applications; there was little, if any, discussion of other Apple computers."

Probably nobody dared mention Laser computers.

We're always looking for news of the Apple world. If you're making news, send your press releases and photographs to News Line, inCider, Elm Street, Peterborough, NH 03458.

STATTUS REPORT

Is Math Revolting?

by Paul Statt, Senior Editor

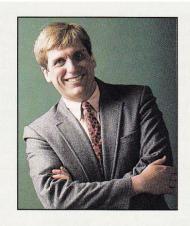

You don't need to know much math to run a computer anymore, but you'd better know how to handle a computer before you tackle modern math.

That's what I learned from The Mathematical Tourist (W.H. Freeman, New York 1988, cloth \$17.95), a collection of essays that Ivars Peterson, the book's author, calls "snapshots of modern mathematics." Modern math is an experimental, empirical science; it's an artistically visual science. But the key to modern mathematics is the computer: Calculating machines have radically changed the art of calculation.

Fractal geometry, for instance, is the study of objects that don't quite exist—at least not in our three-dimensional world. Fractal objects have fractional dimensions; a fractal object might not be quite as flat as a square or quite as solid as a cube. "Fractal geometry and computer graphics are inextricably linked," is how Peterson understates the matter. True fractal objects exist only on the monitors of powerful computers; they could only be imagined before computers could simulate drawings of them.

The trick is that a fractal object is "self-similar." Imagine a box of cornflakes that pictures a boy who's pouring cornflakes from a box, which pictures a boy.... Each part looks like the whole. A fractal object, for example, might look like a triangle, every side of which is another triangle, with ever smaller triangles on ever smaller sides.

What good are fractals? That's always a reasonable question to ask a mathematician, and Peterson, the math and physics editor of the weekly magazine Science News, never forgets the "who" or the "why" of his story. Fractal geometry draws pretty pictures. The "beauty of mathematics" you squinted and strained

"Calculating machines have radically changed the art of calculation."

at but didn't quite see in geometry class is pretty plain in Peterson's "gallery of modern mathematics"—16 color plates.

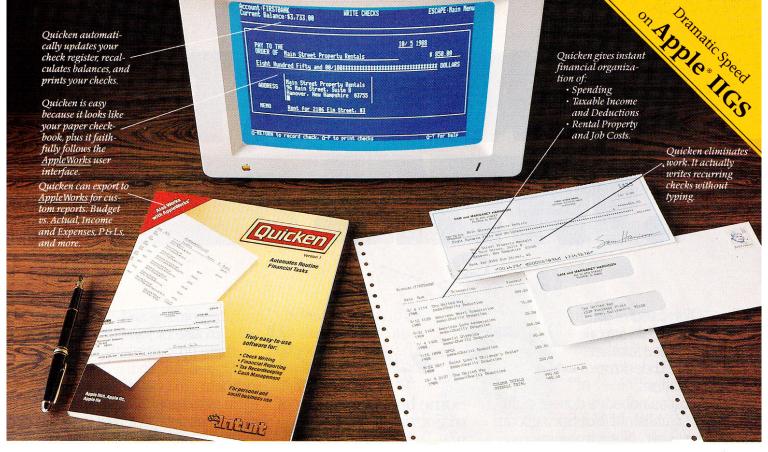

The pictures are practical because fractal geometry can provide a "shortcut" to the creation of realistic computer graphics without dedicating megabytes of memory to storing them. Alert telecommunications programmers will recognize the concept of graphics "packing": To save disk space, send a rule for drawing the picture, not the picture itself. Fractal geometry could make photographic-quality animation possible on home computers; George Lucas of Lucas Film is fascinated by the technology's promise for the next Star Wars as well as the next Maniac Mansion.

The Mathematical Tourist covers a wider territory than fractals, but I was impressed throughout the tour that Peterson "talked to the locals"—working mathematicians—and usually discovered some practical purpose for other abstract concepts such as number theory, higher dimensions, cryptography, topology, and chaos. These are traveler's tales: You don't need to be a native to read and enjoy them, but it helps to have studied the language in high school.

The modern mathematics you'll meet in *The Mathematical Tourist* is still the "queen of sciences," but hardly their Margaret Thatcher, rigidly enforcing "law and order" on rough, delinquent disciplines like physics and chemistry. Math's both more useful and more fun, thanks to computers.

I've been hearing that the Apple II is Apple's educational computer. I hear now that "education isn't only for kids," which seems to mean that adults could learn with Apple IIs, too. The trouble is I don't want to learn to add fractions or solve word problems. (Most kids don't, either—I learned that much when I taught math.) I don't see much "educational software" for the Apple II that teaches as much math as The Mathematical Tourist. I wish I did. Where's the software that would encourage children—or adults—to experiment with numbers or to create pictures with them? The richest math software for the Apple II, 20 years after its birth, is Logo, the computer language that makes abstract concepts visible to the child who takes control of the computer.

A computer makes a great teaching machine; it can teach Spanish, English, or social studies. But the computer isn't shaping those disciplines anew, as it is mathematics. Teaching mathematics without a computer is like teaching home ec without a kitchen. Teaching math with a computer through "drill and practice" is like teaching home ec in the kitchen, but never turning on the oven.

End Financial Hassles. Quicken, \$49.95

uicken is the absolute fastest, easiest way to do your personal or small business finances. Quicken saves you hours of time while perfectly organizing your finances.

Forget Financial Hassle

Quicken is so automatic, it does your financial work for you. It actually learns your regular bills. Just confirm the payment amounts on your auto loan, utilities, or other bills. Quicken does 14 automatic bookkeeping steps and hands you the printed checks already addressed for mailing. All you do is sign them and seal the envelopes. Quicken keeps complete records of your finances so you know exactly how much money you have and where it's going.

Finish Financial Work in Seconds

Instead of dreading tax time, use Quicken to print itemized lists supporting each tax deduction. Quicken is extremely fast. It does in seconds what used to take many minutes or even hours. Want the year's spending for Job 104 or Account 3072? The answers are just seconds away.

No Accounting Mumbo Jumbo

Quicken is as easy as the pen and paper you use now. You'll see the familiar checkbook and check register right on your screen. The only thing that changes is how fast you finish your financial chores. This is bookkeeping that's totally hassle-free.

The World's #1 Selling Financial Software

Here's why Quicken is the world's most popular:

Thanks to Quicken, I'm automating my personal checking account. I've never seen such an easy-to-use manual or software that's so simple to use.

Martin Blumenthal, inCider Magazine

With the power of AppleWorks so readily available, it's more than good... it's indispensable. Home and small business checking software used to be too expensive, too hard to use, and too rigid, and it took too long. Quicken has changed all that.

Ken Landis, A+ Magazine

Use Alone or with AppleWorks*

Quicken transfers your data directly to AppleWorks to create customized reports and spreadsheets. That means you can see your finances any way you like.

Flexible for Personal or Business Use

No other financial software provides more flexibility to handle the wide range of personal or business needs, from personal tax record-keeping to property management. With unlimited income and expense categories, Quicken keeps track of spending by whatever categories you desire.

Quicken works for service and manufacturing businesses, doctors, consultants, designers, and retailers. Quicken is for anyone who wants relief from bookkeeping hassles.

Try Quicken FREE for 30 Days

Order Quicken from the coupon below, or through our toll-free 800 number. If you're not completely satisfied with Quicken for any reason, simply return it for a full refund. No questions asked.

Specifications:

Compatibility: Apple® IIGS, IIc, IIcPlus, IIe (IIe requires extended 80-column card), with one or two floppy disk drives, or hard disk. Any printer. No modern required. Apple Works is optional.

Other: FREE technical support. Not copy-protected. Checks are preapproved by all financial institutions in the U.S. and Canada. Sample checks and order form are enclosed in Quicken package.

Outchen is also available for the Macintosh.*

I want to try Quicken on your no-risk 30-day guarantee. If not completely satisfied, I may return it within 30 days for a full refund. Quicken for \$49.95 plus \$3.00 shipping and handling. California residents add sales tax.

FINALLY, A DESK WITHASIZEAE

"Okay," you're asking. "why would anyone introduce another Apple II desktop publisher?"

Because nobody's done it right. Not Publish It! Not Springboard

At least, not until geoPublish.™ Feature for feature, it's the easiest, most powerful

Publisher. Not anyone.

Reduced, shaded. Some breakthroughs of major proportions.

With geoPublish, you can do almost anything with text and graphics just Text wraps around graphics.

by pointing and clicking your mouse or joystick. Blow them up. Shrink them down. Or just stretch the heck out of them. You can display graphics in any one of 32 different shades and patterns. Text in bold, outline, underline or italic.

You can lav text over graphics. Graphics over text. Or wrap one around the other

in an unlimited number

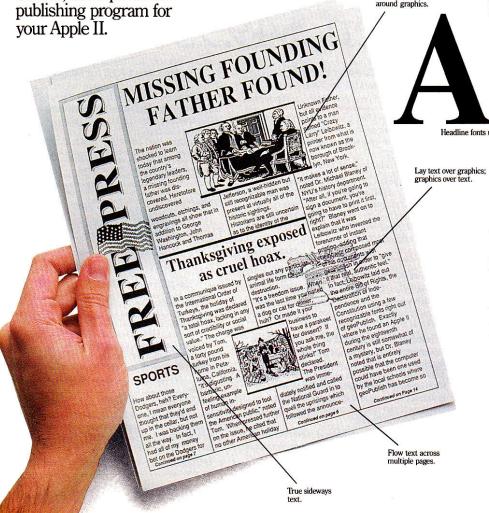

Headline fonts up to 192 points (over 21/2" high), shaded or patterned.

of layouts, with headlines up to 192 points (over 21/2 inches high).

And speaking of layouts, geoPublish not only lets you store all of your originals, it also comes with 24 style sheets built right in. Which means you spend less time contending with columns and more time perfecting your printed page.

We're very big in the import business.

None of your old files are too complex for geoPublish to handle. Because its Text Grabber™ converts almost any text (like AppleWorks, MultiScribe, WordPerfect) instantly,

TOP PUBLISHER LE DIFFERENCE.

with formats intact. You just import it and pour it right in, column by column.

All in less time than it took to describe it.

You can enlarge your art collection too, by clipping from the most popular programs. It doesn't matter if it's Print Shop, Newsroom, Print Master or Dazzle Drawbecause geoPublish has great taste when it comes to imported art.

Cutting the competition down to size.

With geoPublish, you

Lay out a newsletter. Flow text.

find really big differences in even the tiniest places. For example, the zoom option gets you down to the smallest details. The smoothing option automatically irons out bumpy pixels. And then there's the feature most worth waiting for: a redraw function that doesn't make you wait an eternity for one change.

Now, you want to see how we turn the competition on its head? Try sideways text. Real sideways stuff, not just

APPLE CLINIC

Battery Included

by William P. Kennedy, Ph.D., Technical Editor

GS Battery

What happens and what should I do when the battery in my HGS runs down? Is it rechargeable?

David Ellis APO NY

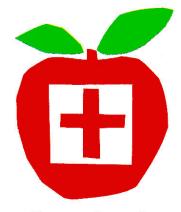

One of the cylinders soldered to your IIGS' motherboard just under the power supply is a 3-volt lithium-sulfide battery. Your GS uses it to power the computer's internal clock and 256 bytes of RAM (random-access memory) that the Control Panel and other applications use. The battery is expected to wear down only after several years of normal use. Then, when you've turned off the power to your GS, the clock will stop ticking and the Control Panel's nondefault settings will disappear. You'll still be able to access the Control Panel, even set the clock to the correct time, and it'll tick along just fine when the power is on.

Unfortunately, the battery isn't rechargeable, nor does the GS charge it when it's turned on, because an overcharged battery may explode. Consequently, when the battery goes, you'll just have to take your GS to the dump and buy a new one. How's that for planned obsolescence?

No, not really. Maria Fleezer, a service technician at a local ComputerLand, assures me that you can take your GS to any authorized Apple dealer to replace the battery. Until then, remember this: Your GS uses the battery only when it's turned off. Hence, the more you use your GS, the longer the battery'll last.

No-Buffers Blues

I was interested in your response to Peter Shadix (Apple Clinic, December 1988, p. 21). I get the "no buffers available" ProDOS error when I try to run a game program using the BASIC "-" (dash) command. CLOSE doesn't help, and, with 128K of RAM in my He, I should have suf-

"Remember—the more you use your GS, the longer the battery'll last."

ficient memory. Besides, I can run the game from Bird's Better Bye. Why is that?

Dave Woodring Vermontville, NY

In some cases, including yours, Dave, the error message is a bit misleading. Rather than generating a "no buffers available" error, BASIC.SYSTEM should've told you that your game program, also a .SYSTEM file, is too long to fit into your Apple's free RAM.

Here's why: ProDOS, the disk-operating system you're using with your Apple II, can load programs or data only into the first 64K of RAM, also known as the "main bank" (64K per bank), even though you have more memory. It's up to your application to move data to other banks.

After you subtract the memory ProDOS uses, along with its buffers (at least one 1K RAM buffer to load a file) and the memory your Apple uses for the text screen, and so on, less than 46K of main-bank RAM is available to load applications. Compound that with .SYS-TEM programs loading initially at address 8192, not zero, and the RAM space available to your program shrinks to less than 36K. Apple limits .SYSTEM files to 36,608 bytes (35.75K) or less. The game program you sent me on disk doesn't exceed that latter limit.

You couldn't "launch" your game using the "-" (dash) command, however, because ProDOS loaded another .SYSTEM program, BASIC.SYSTEM, into the main memory bank when you booted the disk. ProDOS needs BASIC.SYSTEM to translate BASIC commands, such as the dash, into commands ProDOS can recognize, much as BASIC translates commands into machine language, which your Apple's microprocessor can recognize. BASIC.SYSTEM uses "main bank" memory to the tune of 10.25K, leaving only about 24.5K of RAM available to load your 34K program.

You have two other ways to "launch" your game when you boot the disk, though. You've already discovered one of them: Use ProDOS' or some other "quit" routine (Bird's Better Bye is just one of several), because they don't use BASIC.SYSTEM and thus let you load and execute programs less than 36K in length.

Another way is to make your game the first or only disk file with the suffix .SYSTEM. That's because ProDOS searches for and executes the first .SYSTEM program found in the volume directory when you boot the disk. I RENAMED BASIC.SYSTEM to OLD.BS on the disk you sent me, for example, making your game the only .SYSTEM file. It worked fine. Now if I can only figure out the game.

SCSI Lost

I've got a General Computers FX-20 hard-disk drive interfaced to my IIGS via an Apple SCSI card. Everything worked fine until I upgraded to GS/OS. Not only won't the hard drive boot, but it doesn't show up on the desktop when I boot a ▶

DESCRIPTION MUSTICALE CARD

Does most of your computing consist of "hurry up and wait" data processing? The gap between processor speed and data I/O speed has grown alarmingly wide. Speed is critical and nothing can be more irritating than waiting for your disk drives to play catch up. Ohio Kache Systems has eliminated this problem with the Multi-Kache Card. Your computer is capable of working at higher speed if only it could receive information quicker...faster processors won't help if there's no data to process. OKS Multi-Kache is a complete disk management system...superior to anything on the market today. The Multi-Kache Card guarantees that your system will show dramatic speed improvements or your money back! You must be satisfied! • The Multi-Kache Card is up to 40 times faster than other controller cards.

- Multi-Kache Card runs at 8MHz.
- The Multi-Kache Card is transparent in operation.
- Multi-Kache can daisy-chain drives.
- Multi-Kache controls both 3.5 and 5.25 drives.
- The Multi-Kache Card will extend the life of your drives.
- Multi-Kache comes standard with 256K of cache memory.
- Multi-Kache can be upgraded to 1 meg of cache memory.
- The Multi-Kache Card is compatible with Apple II+, IIe and IIGS.

Ohio Kache Systems Corp. 4162 Little York Road, Suite E Dayton, Ohio 45414-2566 513-890-3913

Not Another Proofer!

Yes, folks, I've resolved to clean up some of the problems you've been having with the Applesoft Program Proofer we've published throughout 1988.

Carefully type in the Applesoft BASIC program shown in Listing 1 (ignore the bracketed numbers!) and SAVE it on disk as MAKE .PROOFER; it POKEs the PROOFER program into memory (line 50). If you're using DOS 3.3, type in lines 100-120 shown in *Listing 2* instead of those in Listing 1.

Now type RUN. If you entered the program correctly, you should see the message "Proofer installed!" and a flashing cursor adjacent to the BASIC prompt (7). If not, press Control-Reset, LOAD MAKE .PROOFER, fix the problem, SAVE, and try RUNning it again. Most often, you can find the error in one of the DATA statements.

If all's well, type LIST. An inverse number should appear following each program line; they should match those appearing in brackets in Listing 1. If not, make sure you typed the program correctly, then recheck DATA.

Use the Proofer to compare the numbers generated by your LISTed programs with those we publish. If they're the same, you typed the line(s) correctly and the program should work.

You can activate the Proofer each time you start up BASIC from ProDOS or DOS 3.3 by typing RUN MAKE.PROOFER. Or, once MAKE .PROOFER is RUN, you can BSAVE the machine-language program it creates as PROOFER, A\$300, L\$C5 on your disk. You then can BLOAD PROOFER and CALL 768.

Also, if you reset your Apple or use the PR# command, you'll disconnect the Proofer. Type CALL 768 to restart it. For example, to get a listing of your program with Listing 1. ProDOS version of MAKE.PROOFER program helps debug your typed-in versions of inCider's Applesoft BASIC programs.

the proofer numbers on your printer, use the following sequence:

1) LOAD or type in your program. 2) PR#1 to activate the printer.
3) CALL 768 to restore the Proofer. 4) LIST should print your program. 6) CALL 768 to activate the Proofer.

Those of you familiar with the older version will find that the new, improved Proofer no longer counts spaces between REM and its message or DATA and the data values. So, there shouldn't be a difference in the proofer number between

10 REM Only one space after REM and Five spaces after REM 10 REM

Trailing spaces after a REM message or DATA list do count. A proofer number different from the published one by some factor of 32 is a tip-off.

In addition, the proofer number now includes the order in which you enter a line, particularly the order of values in a DATA statement. So, 10 DATA 1,2,3 will generate a different proofer number from 10 DATA 1.3.2.

The proofer numbers published from now on won't match those generated by the earlier version. Drop me a line if you need that older version to help you enter programs from previous inCider issues.

Three good reasons to buy a memory card from Applied Engineering.

Applied Engineering makes three different memory cards for the IIGS because every IIGS owner is different. Each card was designed to suit specific needs:

GS-RAM. Start with as little as 256K of memory and grow in affordable 256K increments to 1.5 MEG (an amount that once sounded large, but is now considered a moderate amount of memory expansion.) Incorporates 256K x 1 chips.

GS-RAM w/256K \$219 1 MEG \$639 1.5 MEG \$919

GS-RAM Plus." Expands from 1 to 6 MEG in 1 MEG increments. Originally designed for power-users requiring a great deal of internal memory, this card has recently found favor with many moderate users. MEG-sized jumps in memory have now become practical for many users because of the enormous memory requirements of today's software titles. Incorporates 1 MEG x 1 chips.

 GS-RAM Ultra." AE's newest memory card incorporates a new chip - the 256K x 4, which has four times the density of 256K x 1 chips. GS-RAM Ultra offers incremental expansion like the GS-RAM and ultimate size like the GS-RAM Plus. It's expandable from 256K to 4 MEG in 256K increments, so you can start small and still grow to a massive 4 megabytes.

We've also added ROM sockets to the GS-RAM Ultra. ROM sockets allow hard-ware-based applications to be loaded permanently into EPROMs...an increasingly important feature when application become available from Applied Engineering and others.

Consider your needs.

Need a moderate amount of memory?

GS-RAM lets you start small and takes
you up to 1.5 MEG. Need lots of memory
right away? GS-RAM Plus is your best
bet. Want to start small and leave open
the possibility of a huge internal memory?

GS-RAM Ultra is your card. And our GS

Expander™ piggyback card adds up to 2

MEG to any of the three cards. Call AE
for prices.

Trade in your Apple card.

We even offer a trade-in credit for your Apple IIGs memory card, so you can switch to an AE card with more features and greater capacity. Still have questions? Call us, we'll be happy to discuss your particular applications.

DMA compatibility.

All three of our GS memory cards are fully DMA compatible (and they're the ONLY large-format cards that are), so they not only run all GS software, they also support *current and future* DMA peripherals.

Installation couldn't be easier, the carc just plug in. And all three cards feature Applied Engineering's meticulous craftsmanship, along with our 5-year warranty, our 15-day money-back guarantee* and our American-made pride.

Still more:

Each of our GS memory cards comes with many other exclusive features, *disk caching* that tremendously speeds up many programs, including AppleWorks, by virtually eliminating disk access. Our *diagnostic utility* feature graphically detects the presence of bad or improperly installed chips and tests for CAS before RAS chips. And our *AppleWorks enhancement* package dramatically increases AppleWorks' word processor lines (from 7,250 to 22,500), database records (from 6,350 to 22,500), clipboard capacity (from 255 lines to 2,042) and more.

Order today!

To order or for more information, see your dealer or call (214) 241-6060 today, 9 am to 11 pm 7 days. Or send check or money order to Applied Engineering.

GS/OS-based system disk from my 31/2inch drive. What gives?

John Paterson Brampton, Ontario

Similar to an earlier inquiry concerning 51/4-inch disk drives (Apple Clinic, February 1989, p. 22), your problem is simply another case of having to tell GS/OS you've got a special device attached to your GS. Doubleperformed for a nominal fee.

click on the Installer application found on the System Tools disk that accompanies your GS/ OS System Disk. Then, select to install a SCSI hard-disk driver on your GS/OS System Disk. After that, all should be well. If not, you probably need to upgrade your SCSI card to Revision C or later. Contact an authorized Apple dealer. I believe the upgrade is "on" Apple, or at least

Old IIc Drive, New 128EX

I own an older-model (beige) Apple He with an external 51/4-inch disk drive. I'm interested in purchasing a Laser 128EX/2 with built-in 3½-inch disk drive to increase my storage capabilities. Because of the extra cost of another external drive and because many of my most-used programs are on 5\(\frac{1}{4}\)-inch floppies, I'll purchase the 51/4-inch internal-drive Laser 128EX/2 if my old Apple external disk drive won't work with the new Laser. Will the Apple drive work or not?

Harriett Smith Somerville Northport, AL

Your external Apple 51/4-inch disk drive will work fine with the Laser 128EX/2, although models from other manufacturers may not. So go ahead and purchase the Laser 128 EX/2 with internal 31/2-inch drive.

To boot a disk in that external drive, simply press P just after you turn on your Laser 128EX/2 or after you press Control-Reset. That action selects the ROM-based control panel, where you can set the boot slot—slot 6 for the external 51/4-inch drive or slot 7 for the internal 31/2-inch drive for your particular configuration.

You also may want to copy the programs you've stored on 51/4-inch floppies to 31/2-inch disks to take advantage of the latter format's expanded storage and access speed. The only real impediments to that transfer are copyprotected or DOS 3.3-based program disks.

Quickies

You can transfer Mac graphics to your GS with SHRConvert version 2.1 by Jason Harper. It's available as shareware on most major bulletin-board systems.

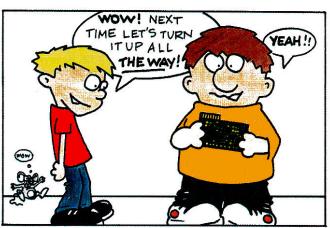

> -Bob Johnson Herperia, CA

Apple Clinic is a forum for discussing and answering your questions and concerns about Apple II hardware and software. Address your correspondence to Apple Clinic, inCider, 80 Elm Street, Peterborough, NH 03458. Because of the volume of letters, most won't appear in print, but expect a response from Dr. Kennedy via postcard.

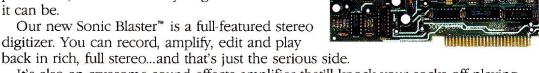

Serious Fun

Okay, we're willing to admit that sometimes we take things a little too seriously. We get wrapped up in developing ways to make your IIGS more productive, and occasionally forget how much fun it can be.

Our new Sonic Blaster™ is a full-featured stereo digitizer. You can record, amplify, edit and play

It's also an awesome sound effects amplifier that'll knock your socks off playing great new IIGS games like Tomahawk, 4th and Inches, Winter Games, Silent Service and Zany Golf, to name a few.

Noises and sound effects fill the room. The difference is incredible. Use your own speakers, amplified or unamplified. Our own powerful software is included free, so there's nothing more to buy.

Sonic Blaster. It's why they put the "S" in IIGS. \$129.

Order today! To order or for more information, see your dealer or call (214) 241-6060 today, 9 am to 11 pm, 7 days. Or send check or money order to Applied Engineering. MasterCard, VISA and C.O.D. welcome. Texas residents add 7% sales tax. Add \$10 outside U.S.A.

REVIEWS

Deskpak; FutureSound; Slide Shop; Iconix; At a Glance; Games Editors Play: Warlock GS, Bubble Ghost GS, Arkanoid GS, Serve and Volley GS, Short Takes

In with the New

Desk accessories aren't for the faint-hearted. Installation procedures and system requirements can be confusing, and you'll need to spend some time getting used to them. Once you do, though, these handy pop-up utilities can help you get your work done quickly and easily.

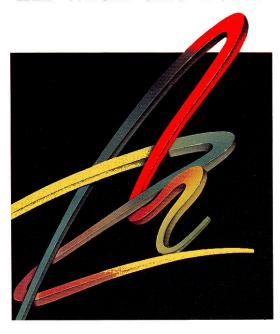

The first thing you'll have to decide is what kind of desk accessory (DA) you can use. Classic desk accessories (CDAs) work with older ProDOS 8 programs, while new desk accessories (NDAs) work with ProDOS 16 or GS/OS programs. NDAs work only with GS programs that support Apple's Human-

Interface Standard. (You can recognize such a program by the menu bar across the top of the screen and the small apple in the left-hand corner.)

Deskpak is a collection of NDAs. According to Simple Software, the package requires 512K, but plan on needing at least 768K. You'll also need two 3½-inch drives to access the Deskpak collection easily; otherwise you'll have to swap disks every time you want to load a DA or save a file. A hard disk is even better, but it's not essential.

Start by installing Deskpak on your program disk, the disk you use to boot your GS, by copying it into the desk-accessories file. The easiest way is to copy the Add DA accessory, which is designed to let you move other DAs into your program's desk-accessory file, located in the system folder.

Once you get over the installation hurdle, you can begin to enjoy the convenience this software offers you. Following is an overview of Deskpak's 19 DAs:

DESKPAK

Simple Software Systems, 4612 North Landing Drive, Marietta, GA 30066, (404) 928-4388, distributed by Brown-Wagh Publishing, 16795 Lark Avenue, Suite 210, Los Gatos, CA 95030, (408) 395-3838 Desk accessories for Apple HGS programs; 512K Apple HGS, 768K or more recommended \$89.95

Rating:

Add DA. This simple desk accessory lets you conserve RAM and storage space by adding DAs to your desktop only as you need them. Using Add DA, you can select any other desk accessory while you're in the midst of a program. Most GS packages virtually fill the disks they come on, so it's difficult to install a large number

of DAs. With Add DA, you can store them on a separate disk and add them as you need them.

When you need a DA, select Add DA from the pull-down Apple menu. Then select the disk containing your DAs (you'll only have to do this once in each session) and pick the one you need. Once loaded, the accessory you've chosen will appear under the Apple menu until you reboot. Unfortunately, you can't choose multiple accessories to load at the same time, so the process can be cumbersome. That's a small price to pay, though; without Add DA, a hard drive would be

a neccessity.

Appointments. This one may take the place of your Daytimer. The Appointments DA shows you one month at a time on your screen; by clicking on any day, you can enter and view your commitments. Any day for which you've made appointments appears on the monthly calendar with a small check in the corner. One thing to remember, though: Once you've made an appointment, the check will remain even if you delete the appointment.

inCider's Ratings

Excellent—remarkable, a must buy
Very good—impressive
and recommended
Good—average, solid performance
Fair—flawed but adequate
Poor—unacceptable or unusable

ASCII Chart. ASCII (American Standard Code for Information Interchange) Chart shows the decimal, hexadecimal, and mnemonic character for each ASCII code. It's a handy reference for programmers searching for the right hex-code characters; it's an application you'll either use a lot or never touch, depending on your interest in programming.

Blackout. If you leave your computer on and unattended, you can burn the screen image onto the surface of your monitor. With Blackout, you can preset your computer to blank out its screen when you haven't used it for a certain period of time.

Your GS is still working while the screen is shut down, so a complex data-base calculation, for example, won't be interrupted. When you want to work with your computer again, move the mouse or press any key, and the screen will come back to life.

Calculator. The calculator is one of Desk-pak's most helpful accessories—and one of the easiest to use. In addition to performing standard calculations, it includes features such as cut and paste, calculation of stored numbers, and keyboard equivalents. When you're in a hurry to get back to your document, press the C key to shut off the calculator—it's quicker than sliding your mouse over to the close button.

Calendar. The calendar uses the same monthly format as the Appointments DA. It's designed to let you check a date in almost any month and year (from 1940 to 2039). Like Appointments, click on the month you want to see, then flip through the years with the yr+ and yr- keys.

Clipboard. The GS system clipboard, unlike the Macintosh clipboard, isn't accessible from every program. Instead, each program provides its own. Deskpak's clipboard DA lets you view and copy be-

tween the system clipboard and any true GS program's, making it much easier to transfer text and pictures from program to program.

Concentrate/Puzzle. No collection of desk accessories would be complete without a game. Deskpak has two, Concentrate and Puzzle. Concentrate tests your memory by having you flip tiles in seach of two that match. Puzzle is a replica of the sequencing game originally supplied on the Macintosh. Both are fun and mildly addictive.

File tools. Deskpak's set of file tools lets you lock, unlock, rename, copy, and delete files without leaving your program for the operating system. It's quick, it's handy, and it works.

Mini DB. Mini DB is, as its name implies, a small database. It's based on the concept of the Rolodex-type file card. You can store basic information about friends, clients, or products in an accessible place. You can rename each of the seven fields, arrange your card deck, add new cards, and find text within a card.

Notepad. Deskpak's notepad does exactly what you'd expect: It saves up to 25 pages of notes. You can jump to any page, as long as you remember the page number, and you can print any or all of your pages.

Password. The password function is a handy way to protect your computer system from spying eyes. It's very useful, until you forget your password. For many of us, this accessory is best left untouched.

Print It. This utility lets you send a text file to your printer. Unless you use a variety of programs and therefore create text files to transfer from one program to another, it will be of limited use.

Screen Saver. With Screen Saver, you can

At a Glance

Once Upon a Time (December 1988, p. 110, by Carol Holzberg), Compu-Teach, 78 Olive Street, New Haven, CT 06511, (203) 777-7738, \$39.95 Rating:

Once Upon a Time is desktop publishing for kids. Children can choose the Farm, Safari, or Main Street Storybanks, and put together tales based on those picture sets. Each Storybank contains anywhere from 26 to 32 illustrations relating to that theme. The Safari collection includes pictures of an alligator, boa, elephant, giraffe, and other creatures you'd find in the jungle.

Children select pictures and position them, then add up to three lines of text at the bottom of the page. Once Upon a Time is easy to use, but somewhat limited in its scope in that children must adhere to stories relating to the Storybank picture sets. The program doesn't print in color, but includes a set of colored pencils for the "hands-on" approach.

Wordbench (December 1988, p. 28, by Patricia Payne), Addison-Wesley Publishing Company, 6 Jacob Way, Reading, MA 01867, (617) 944-3700, \$149

Rating:

Wordbench is more a writing program than a mere word processor, adding outliner, note-taker, and brainstormer modules, plus thesaurus, spelling checker, formatting tools, print manager, viewer (to flip among documents), and macros (called *shortcuts* in this program).

The package's neatest feature is that you can categorize your jottings in the notetaker, then organize and outline, and presto—Wordbench puts it all together for a coherent first draft.

Managing Your Money 3.0 (November 1988, p. 34, by Gregory Glau), MECA Ventures Inc., 355 Riverside Avenue, Westport, CT 06880, (203) 222-9150, \$149.95

Rating:

The latest version of Managing Your Money builds on the program's initial strengths and successes. It now comes on both $3\frac{1}{2}$ - and $5\frac{1}{2}$ - inch disks; you can send your financial data to other programs; and the software now incorporates the latest tax laws. There are also a newsletter and update service to which you can subscribe.

The program's structure is similar to that of a book. Each disk is like a chapter focusing on one area. The difference is that Managing Your Money gives you more than instructions—it also gives you the tools to put your financial matters in order. At the end of the year, the program

Wordbench by Addison Wesley

Wordbench is the new way to prepare documents that goes beyond word processing. Wordbench lets you start your project with a full-featured Outliner and Notetaker, helping you organize your ideas, references, and notes, long before you begin to write the first draft. Then, unleash the Wordbench Writer to pull all of your work together clearly and effectively, without retyping. Wordbench lets you add creativity and correctness to your doc-

uments with its Brainstormer to help put your creative processes to work, a Thesaurus to help find the perfect word, and a Spellchecker to help you mind your "P's" and "Q's". And when it's time to print, Wordbench lets you add the text formatting you need to add impact and style to any presentation.

Chessmaster 2100 by Electronic Arts

Chessmaster 2100 is the newest release of the best chess game for the Apple II. You'll find all of the powerful, impressive features of Chessmaster 2000 plus new classic games, more in-depth analysis, and triple the number of selectable skill levels. Along with the familiar 2-D and 3-D modes, you can now view all important information at once in "War Room" mode! For novices, Chessmaster 2100 offers 'teach' and 'hint' modes that show how to think through a chess

match, and for the aspirant grandmaster, there are over 150,000 moves in the opening library and a "Rate My Play" evaluation routine. Chessmaster 2100 comes with a U.S. Chess Federation tutorial, offers on-line help, lets you save and print games, and lets you import your own chess set from any popular paint program!

System Saver IIGs by Kensington

System Saver IIGS organizes your power with four outlets for your computer, monitor, and two peripherals. Two frontmounted, lighted switches put everything at your fingertips. It also protects your system from dangerous power surges, spikes and noise. It clips surges and spikes at a safe level, and filters out disruptive EMI/RFI line

noise. Best of all, System Saver IIGs keeps your Apple cool. Its whisper-quiet fan draws cool air through the back and bottom vents of the IIGS, over the power supply (the primary source of heat), and out the top vents at the rate of 17 cubic feet per minute. Protect your

investment today! System Saver IIGs......79. to Polish Up Your Apple

ProTERM 2.0 by Checkmate Technology

ProTERM 2.0 is the professional telecommunications software for everyone who owns an Apple IIGs, IIe, IIc, or Laser 128 computer with 128K+ of RAM. Its comprehensive 170-page manual, complete Hayes compatibility, and easy-access popup menus make it versatile and simple. Every user will benefit from its on-screen help files, the full-feature text editor, and large assortment of error-free protocols. Professionals

will value *ProTERM's* advanced features which include Procedure Files to store macros, batch and disk transfer capabilities, and its elapsed time counter (requires clock card). *ProTERM's* simple installation, password security option, and VT-100 terminal emulation make it the only choice for communicating in home, school, or business environments.

Quicken by Intuit

Quicken is the fast, easy way to cut through personal and small business paper work. In minutes you'll get a handle on your finances without having to bother with all the burdensome terminology and repetitive entry that most accounting packages require. Quicken is flexible; it lets you enter an unlimited number of transactions, expense and income categories, and checking accounts. Quicken lets you write checks, make and track budgets, manage cash flow, and even reconcile unbalanced accounts. Quicken is ideal for peo-

ple who need to manage any sum of money in a small amount of time!

Specials good through March 31, 1989.

save an on-screen graphic (320-by-640 resolution) to disk for later use. Simply select the disk to which you'd like to save.

Start Up. If you want a colorful picture to look at while your system loads, you can install one with Start Up.

Scraps. Simple Scrap and Super Scrap let you save frequently used text or graphics so that you can access them as needed without having to re-create them.

Times Three. Times Three is a clock: you can set it to show the time on the menu bar, or display the time and date elsewhere.

PROBLEMS

Deskpak's major difficulty is compatibility. When we tested Deskpak with MultiScribe GS and WordPerfect, certain desk accessories crashed the system consistently. According to Kevin Seidule, one of Deskpak's designers and Simple Software's technical-support representative, the problem lies with programs' lack of adherence to Apple's Human Interface Standard. Specifically, the Start is often removed to save space, and another file designated as the Start file.

There are two solutions, according to Seidule. One is to boot from a system disk rather than from a program disk. The other is to copy the program files to a system disk. Because the system disk has the original Start file intact, there shouldn't be any compatibility problems, says Seidule. Unfortunately, many GS programs feature a renamed Start file, so this will be an ongoing problem if you don't have a hard disk. In addition, with the original Start file back, there may be no space to install a desk accessory.

Desk accessories can be a useful addition to your computer system; a good set can help you work easily and quickly. You have to decide whether they're important enough to warrant the time and effort required to configure them correctly.

Patricia Payne Henniker, NH

Sound and Music

FUTURESOUND

Applied Visions, Inc., One Kendall Square, Suite 2200, Cambridge, MA 02139, (617) 494-5417

Sound-digitizer board with full stereo output; 512K Apple IIGS (1 megabyte recommended)

\$279

Rating:

If graphics was the buzzword of the mid-'80s, then *sound* will be the rage during the last two years of the decade-and rightfully so. After all, that's what the S in Apple *IIGS* stands for. Advancements in graphics will continue, but many people are going to be looking for ways to produce highquality sound-with products like FutureSound from Applied Visions.

GIVE AND TAKE

FutureSound pushes the capacity of the GS' multichannel digital-recording synthesizer to the limits. FutureSound can record sounds from virtually any source in true stereo and can produce stereo sound through right and left output jacks or a stereo headphone jack.

Installing FutureSound isn't difficult, but it takes some time and care. Applied Visions suggests you place the card in slot 6—a curious choice, because that slot is usually used for the almost obligatory 51/4-inch disk drive. Upon booting the system, the FutureSound software is programmed to look to slot 6 first. The first Continued

summarizes all your transactions in as much detail as you need. Chapters include a notepad, checkbook and budget data, a tax estimator, insurance needs, a financial calculator, stock tracking, net worth, a card file, and a report generator.

The manual includes every help screen you might encounter in the program. Also, remember there will be plenty of disk swapping with 51/4-inch disks, and that can be confusing.

In all, Managing Your Money is an effective way to keep track of where you spend your money.

geoPublish 2.1 (February 1989, p. 88, by Carol Holzberg), Berkeley Softworks, 2150 Shattuck Avenue, Berkeley, CA 94704, (800) 443-0100 x432, (415) 644-0883, \$99.95

Rating:

GeoPublish is a good example of the new breed of high-end desktop publishers; it offers power and sophistication you might not have thought possible on an 8-bit, 128K Apple II. GeoPublish combines word processing with "what you see is what you get" page-layout capabilities. You can mix text with graphics for placement in up to four columns on a

GeoPublish also sports a Page Graphics toolbox with several object-oriented drawing tools that can import photo scraps directly from geoPublish clip art or from other programs such as The Newsroom, PrintMaster, The Print Shop, and Dazzle Draw (with help from the Graphics

Grabber).

You can also draw original line objects in a variety of patterns and brush widths, sketch geometric shapes with variable border thicknesses, and fill them with patterns. The Page Graphics tools let you add text as well in a variety of fonts, styles, and sizes.

Despite a few minor inconveniences, Apple II users suffering from GS and Macintosh envy will appreciate geoPublish.

SuperPrint (October 1988, p. 30, by James Trunzo), Scholastic Software, 730 Broadway, New York, NY 10003, (212) 505-3000, \$39.95 Rating:

Scholastic Software's SuperPrint is a useful, innovative program, with clip art, fonts, and "backgrounds" included. It offers the standard variety of options-graphics-enhanced signs, letterheads, banners, and greeting cards. It surpasses most programs, however, by printing giant posters, wall-sized calendars, and bulletin-boardsized signs.

The quality of the finished product-even at its largest-is excellent, especially if you don't print in draft mode. With horizontal and vertical scrolling, you can preview the design on screen in exactly the size the program will print it.

FingerPrint GSi (November 1988, p. 37, by James Trunzo), Thirdware Computer Products, 4747 N.W. 72nd Avenue, Miami, FL 33166, \$99 Rating:

FingerPrint GSi lets you save a screen image quickly by printing it. This graphics-utility card has been available to He owners for some time; the new version is designed for the GS.

You can install the FingerPrint card in five minutes-the manual contains step-by-step directions and it's impossible to plug it in the wrong way. After running two installation tests, you're ready to print a screen. Press the fingerprint button, then click your mouse or hit Return. The screen starts to print, and that's all there is to it.

Home Video Producer (January 1989, p. 30, by James Trunzo), Epyx, 600 Galveston Drive, Redwood City, CA 94063, (415) 366-0606, \$49.95 Rating:

It seems that Epyx wanted to make Home Video Producer (HVP) as easy to use as possible, building in numerous features that let you type in your information and let the program take over from there. The program includes a dozen templates for commonly videotaped situations (holidays, weddings, and so on).

HVP uses menus and windows for the selection process. On-screen graphics are attractive and helpful, especially when combined with the ever-present information bars. Selection icons logically represent the functions they serve and a satisfactory number of options are included.

One of the program's most outstanding features is the large number of graphics clips available to enhance your layouts. HVP includes 75 different pictures from which to choose. When you add those choices to the various borders, backgrounds, fonts, and types of transitions offered, it becomes obvious that HVP allows for a wide variety of combinations.

ShowOff (December 1988, p. 34, by Carol Holzberg), Broderbund Software, 17 Paul Drive, San Rafael, CA 94903-2101, (415) 492-3500, \$59.95 Rating:

ShowOff may do for desktop presentation what The Print Shop did for desktop publishing. You can create overhead transparencies, a computerized "slide" show, and all sorts of other illustrations and diagrams. Compose a screen with the program's graphics tools, or arrange one from the assortment of nine clip-art stickers and 385 icons stored on disk.

After you've assembled a set of "slides," you can set them to run manually or automatically and adjust a timer to control how long each image remains on screen. You can also select the type of transition between slides-scrolling horizontally or vertically, or fading out. In addition, Broderbund is said to be currently developing a ShowOff Graphics Collection that will include more than 200 additional pictures.

time it fails to find the board in that slot. it prompts you for the current location of the board. Thereafter, the software will check the slot you indicate.

Be careful when you're threading the cable through the vertical openings at the back of your GS; the manufacturer provides enough cable that you won't place undue strain on the connecting points, but rough handling could separate cables and connectors from each other or the board. Once you've installed the board, connect your stereo amplifiers, headphones, and microphone to the appropriate jacks.

VERSATILE SOFTWARE CONTROL

FutureSound's software is sophisticated. You determine the recording level, then set and monitor the length and quality of your sound. To run FutureSound, you must understand the program's multitude of software controls, which range from buttons indicating track selection to a visual sound graph you'll use as a barometer to determine whether other values are set correctly.

Furthermore, FutureSound lets you program sounds to as many as 15 tracks. The system treats each track independently, but because they're all co-resident in your computer's memory, you can play back any number of tracks simultaneously. Couple the number of track combinations with the ability to vary playback volume, speed, and special effects and you begin to get an idea of Future-Sound's versatility.

EXTRA EFFECTS

Among the selections at the top of the menu screen is Bag of Tricks, a collection of six effects you can apply to an entire recording or any part of one. For example, you can blank out portions of your recording; make segments of your recordings softer or louder; or even play the current track backward if you like.

The software includes three other effects you can add to your recordings they should prove to be the most popular because they're the most fun. "Stutter" lets you create what FutureSound accurately labels the "Max Headroom" effect. For those of you not familiar with the 1987 season's popular futuristic television show or the Max Headroom commercials, Stutter produces a rapid repetition of a letter, syllable, or word ("M-M-Max Head-Head-Headroom," for example).

"Echo" reproduces your sound, while "Fade" lets you mark a segment of your recording to fade gradually in or out.

Once you've recorded something, you can edit it in a number of ways: You can erase tracks one at a time or collectively, completely or by sections; you can change and reset original values and combine portions of one recording with another ("splicing") by overwriting segments of the destination track or by inserting segments at any particular point. Just indicate beginning and end points on the counters found on the main screen and the FutureSound software does the rest. A third splicing option, "Mix," is more powerful, however. Mixing melds the digitized sounds on one track with those on another.

Take care when using any of the Splicing options, because these operations actually modify the sound you've recorded and you can't undo any changes you make.

SOUNDS GOOD

FutureSound offers numerous options and excellent performance when it comes to recording instrumental or vocal sounds; it would be worth the price if it did nothing else. FutureSound's ability to play in true stereo is just as impressive as its other features, though.

Whether you make your own recordings or simply use programs that take advantage of the GS' sound, you'll be impressed and pleasantly surprised by the beautiful music and stunning sound effects your GS can produce. Of course, the quality of the sound depends on the quality of your stereo speakers. Future-Sound is certainly capable of pushing the sounds out of the computer, but your equipment at the other end must complement it.

Continued on p. 78

APPLEWORKS

With six applications in one smoothly integrated package, AppleWorks GS sets a new standard in 16-bit software—but does the Apple IIGS have the power to handle it?

By ERIC GREVSTAD

he program you've been waiting for is now the program you'll be waiting for. AppleWorks GS, Claris Corporation's all-new, 16-bit successor to the incomparable 8-bit AppleWorks, is just as colorful, powerful, and easy to use as IIGS owners had hoped. It's a remarkable program, destined to become the standard in GS productivity software. Unfortunately, it's

also destined to become the standard example of the pros and cons affecting all IIGS software: Are graphics icons and dialog boxes worth having if you must wait five seconds to scroll a page, or 30 seconds for commands to execute, as you stare at a half-drawn screen where a dialog box used to be?

AppleWorks GS' position is particularly difficult because it's not a simple software upgrade, but the rebirth of a legend—a IIGS program designed to replace the best Apple II program of all time. Given that impossible task, Claris deserves an ovation. AppleWorks GS' merit goes beyond its mouse-controlled menus and windows, or even its integration of six functions to 8-bit AppleWorks' three. New users or families will find it a true all-in-one solution. AppleWorks veterans will discover across-the-board improvements, plus the appeal of combining word processing, spreadsheet work, and database management with glamorous graphics and desktop publishing.

But veterans should think hard before making the switch. AppleWorks GS is software that strains the limits of GS hardware. While the program itself is reasonably priced (and Claris' upgrade prices more reasonable still), it takes an expensive, fully loaded IIGS system to deliver barely adequate performance—snail-like performance, to anyone used to the speed of 8-bit AppleWorks with an expanded-memory card. Macintosh and MS-DOS users will envy the power of AppleWorks GS, but Apple II buffs may feel that changing from old to \blacktriangleright

GS: worth the wait?

new AppleWorks is like changing from David to Goliath.

There's more depth to AppleWorks GS than one magazine feature can describe. Future articles in *inCider* will explore the strengths, weaknesses, and secrets of the program in detail. The discussion here presents an overview and first impressions from testing production copies of the software, which shipped in late October 1988.

AppleWorks GS comes on three noncopy-protected 3½-inch disks—Program, Utilities, and System. The last includes GS/OS and Finder 1.2, as seen on the current IIGS System Disk, with AppleWorks GS' own optimized ImageWriter driver, as well as the other GS/OS printer drivers.

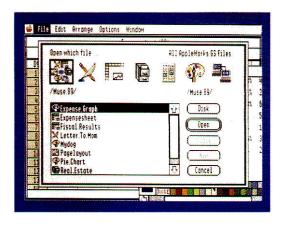

You can use AppleWorks GS with one 3½-inch drive, but it'll involve swapping the Program and System disks whenever you use a new application or a new font, with the Utilities disk for the spelling checker or thesaurus. With one drive, it takes one minute 45 seconds, including two swaps, to launch AppleWorks GS from the Finder desktop, then more time to load an application (50 seconds for the word processor or spreadsheet,

two minutes for the graphics module). A Configure command lets you get the waiting over with, speeding later operations, by preloading your favorite applications at startup (for example, five and a half minutes to launch the program with word processor, graphics, and page layout).

A second $3\frac{1}{2}$ -inch drive or hard drive is clearly a good idea, but the first requirement for many GS owners will be added memory: The program needs a minimum 1.25 megabytes of RAM (random-access memory), not counting any RAM disk or ROM (read-only memory) disk. If you're starting from scratch, the list price of a IIGS system suitable for AppleWorks GS, with two $3\frac{1}{2}$ -inch drives, is \$3083. If you add a $5\frac{1}{4}$ -inch disk drive and an ImageWriter printer, the retail price is about \$4000. While you'll pay much less at your local dealership, that's still a heavy investment.

THE NEXT GENERATION

Except for reading AppleWorks files (along with ASCII, Multi-Scribe GS, and most GS paint programs' files), AppleWorks GS is almost completely different from its ancestor. While there are openapple key commands, many perform different functions from the same keystrokes in AppleWorks; most work is done with the mouse and pull-down menus. While there's a desktop, it holds up to 14

Top: AppleWorks GS' colorful icons represent the program's six modules—word processor, spreadsheet, database manager, page layout, graphics, and telecommunications. Directly above: The graphics module is an impressive cross between painting and object-oriented drawing software. As this illustration by an inCider editor demonstrates, however, software does not an artist make.

movable, resizable windows instead of 12 full-screen text displays. While there's a fat two-volume manual, there are no on-line help screens or sample files on disk.

The last point is a minor one, because the new interface makes AppleWorks GS' greatest strength its ease of use. Rulers, buttons, and dialog boxes are far friendlier than, say, the jumble of options that greet you in 8-bit AppleWorks when you type Open apple-O for word-processor formatting.

Data transfer is available through disk-file imports and GS/OS' cut-andpaste clipboard, but it's more fun to arrange application windows on screen, then drag information from one into the other (moving the mouse while holding the control key, which changes the pointer to a nifty lightning-bolt symbol).

The level of innovation, and the benefits of the graphics interface, vary from application to application. AppleWorks GS' communications module, for example, is definitely the junior partner of the six. It supports the transfer protocols a good telcom program should (Xmodem, Ymo-

dem, and Binary II) as well as sending and capturing ASCII text, and its pull-down menus simplify the chore of setting parameters.

But, though it lets you enter and dial numbers from an alphabetized phone list, the module can't record log-on sequences or macros as a good telcom program should. It's adequate for occasional calls to on-line services, but serious modem owners will want a more full-featured program, while AppleLink subscribers will use that service's own, even easier software.

The word processor, by contrast, is a complete, convenient program, tracing its heritage to the programmers' pre-Claris days as the makers of MultiScribe GS. Lacking the fanciest features of WordPerfect, the word processor nevertheless provides a good mix of type styles and sizes with easy mouse-controlled text selection and editing. The paragraph-based formatting gives lots of flexibility. (After my first few files, I learned to change the default ruler's margins, tabs, spacing, and justification before I began typing, so my settings wouldn't disappear when I started the second paragraph.)

The spelling checker lacks a "replace all" function for multiple occurrences of the same error, but is otherwise solid, letting you type a correction, add a word to an editable personal dictionary, or choose from a list of accurate suggestions. The Sexist Software Award goes to the thesaurus, which is usually helpful with definitions and

synonyms but lists only one meaning for woman: "the female partner in a marriage." Like the spelling checker, it's also slow when using floppy disks.

An even slower performer is AppleWorks GS' "Better Text" print option: A two-page letter that printed on an ImageWriter II in 30 seconds in draft mode took more than eight minutes in Courier. (Think you'll speed printing by spec-**Mying** draft mode, but setting the ImageWriter to high quality? Sorry, AppleWorks GS resets the printer.) The print speed is a disappointment, since the word processor is the only AppleWorks GS module I found to be reasonably fast—able to keep up with rapid typing, quicker than 8bit AppleWorks in a search-andreplace test.

STRONGER BUT SLOWER

Patience is a virtue when using AppleWorks GS' spreadsheet, where the advantage of intelligent recalculation is destroyed by the disadvantage of redrawing graphics-based screens. My 1000-cell recalculation test, which AppleWorks 2.0 finished in 14.5 seconds, took the new pro-

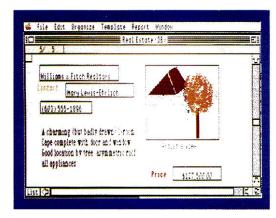

41 seconds, almost three times as long. A simple Go To termand, moving the cursor from cell T50 back to A1, took 20 seconds. Highlighting a range of cells that extends past the bottom of the screen, as you hold the mouse button and watch the display leach upward line by line, is agonizing.

I was appeased, however, by the spreadsheet's 73 functions, including beefed-up features such as date math and logical functions apporting text strings: IF(D4>5000, "Credit OK", "Reject") returns a discrept phrase depending on the value of cell D4. Having to preface communication is a nuisance, but picking hard-to-remember features from a scrolling List Functions is a convenience.

So is the ability to copy a worksheet range to the graphics module, creating a colorful pie, bar, 3-D bar, line, or scatter chart. It's handy for simple charting, though graphs limited to one data range (one column), with no niceties such as exploded pie slices or labels toler than those you add in the graphics module), will hardly set the brainess world on fire.

More potent improvements, and perhaps the most major adjustments for Apple Works owners, await in the database. It's sophisticated, but the Before you can see records in the traditional-form screen or apple to be before you have to master the desktop-publishing-

Expensesheet is Expense Graph (GR) 8 77.T O 11.13 **34** \$% Car Expenses 2.81 Mortgage Electricity E \$.47 lothing I 19.50 35, Entertainment 115 Copie

Top: The spreadsheet is hardly a speed demon, but it does offer an impressive lineup of features, including business graphing. Directly above: You can design a database that includes text, numeric, and graphical information. If you just want a plain old address book, though, AppleWorks GS may be more than you bargained for.

style definition screen.

Here, you draw your database with the mouse, making a box to hold each field, then specifying whether it holds text, numeric, date, time, or one of two other kinds of information-static text, treated as an uneditable graphic to show fancy fonts or hold a lengthy comment, or a picture, imported from the graphics module and scaled or cropped to fit the field. You can add nearly every enhancement or embellishment you can imagine-using spreadsheet functions for calculated fields, specifying numeric formats or centered text, or adding other fields for labels such as "Name:" or report headers and footers.

This is great for creative, advanced database design, but users wanting a simple address book or record collection, as opposed to a fancy template with fields arrayed artfully beneath your company's name and insignia, may find it a bit much. Quick-and-dirty data hunters, used to Apple-Works' casual Open apple-R and "contains" operator to select records, will feel balked; while there's a Find command for occurrences of text strings, AppleWorks GS' Match Records command involves double-click-

ing on math operators and typing exact-match text in quotes.

The new database's menu-driven mail merge isn't that much prettier than old AppleWorks', either, though its reports, generated as word-processing files ready for further editing or formatting, are a plus.

GETTING INTO GRAPHICS

While the word processor is my favorite part of the package, AppleWorks GS' brightest star is probably its graphics module. Although it omits the most exotic features of DeluxePaint II or Paintworks Gold (perspective, color cycling, turning objects into paintbrushes), it's an excellent combination of freehand painting and object-oriented drawing tools.

On the paint side, there are all the brush sizes, color palettes, and fill patterns you'd expect, with traditional tools such as a spray can and zoom (pixel-level) editing; the drawing side offers boxes, circles, and so on. The two combine after you finish painting a bit-mapped image: It becomes an object just like those created with the drawing tools, suitable for dragging, copying, rotating, or shuffling toward the top or bottom of a stack.

The kicker in the above sentence is "after you finish painting."

Because I often switched to nonpaint tools such as the eraser or

zoom editor while creating an image, I kept finding that the resulting object was five or six separate objects; when I drew a kitten and tried to drag or place it beside a tree, I yanked off its head. Luckily, a "collapse" command lets you combine selected objects into one. I also like the graphics module's keyboard equivalents to mouse commands; it's hard to move the mouse as precisely as the Nudge commands, which push an object one pixel up, down, left, or right.

AppleWorks GS' most fashionable application, the page-layout program, is a little disappointing compared to the first-class graphics module. Basically, AppleWorks GS lets you arrange graphics and text on pages with one, two, or three columns. You can see a full-page or actual-size view for overall layout or detail work, and use rulers to help draw lines or place objects. Items shared by all pages, such as column guides or headers with page numbers, can appear on left or right master pages.

Graphics objects are graphics files or selected parts thereof, imported (actual size) via disk, clipboard, or the

Control-drag technique. Text objects are movable, resizable frames created to hold text, whether imported or typed in the page-layout module. You can't flow text around graphics, but a story that's too big to fit into one text object flows easily into another in a "text stream."

The text-handling features are almost as good as the word processor's, and the program works well enough for simple newsletters or memos. But it takes practice to avoid minor slips, such as imported text flooding a column instead of staying in its frame, or dragging a column guide when you wanted to resize a text box. (I wish you could hide the nonprinting frames around text objects, as you can

MultiScribe GS

Top: The word processor bears a proud heritage – it's a new and improved version of Styleware's popular MultiScribe GS. Directly above: Apple-Works' six applications come together in the pagelayout module. Be prepared to wait for your GS to catch up with your inspiration, though.

hide column guides; drawing boxes around headlines is tricky.)

The most frustrating part of page layout, or the graphics module once you get three or four objects on screen, is that AppleWorks GS' sluggish response cripples the whole idea of point-and-click computing. The concept encourages you to brainstorm, to work fast-drag a text object, center the headline within it, position a picture, see how it looks. But all too often, as you move the mouse pointer to click on Step 3, you'll see it change to the wristwatch icon indicating the pause for Step 1. When your ideas race, the IIGS crawls.

SHIFTING THE BLAME

Ultimately, it's the HGS that drags AppleWorks GS down. Individual users may have individual gripes, things that got left out while flashy features were put in. (Personally, I'd trade database picture files for 8-bit AppleWorks' ability to format data disks within the program.) But the software has some splendid features, and its overall design and integration are extraordinary.

There are two companies Apple II

owners have lately loved to hate, to accuse of shortchanging the II and favoring the Macintosh. AppleWorks GS redeems Claris, and lets users focus their anger squarely on Apple—for selling a computer with the price and potential of a Porsche, but the power of a Pinto.

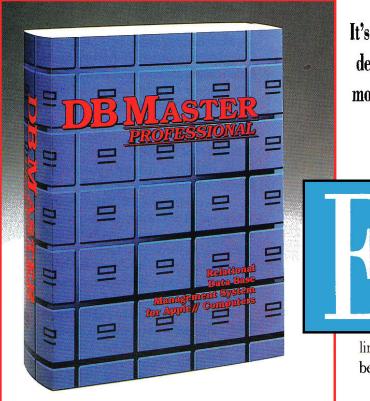

AppleWorks GS may be a harbinger of future hardware, the way original AppleWorks appeared before many II owners had acquired 128K, let alone expanded memory. Applied Engineering, a company born to do Apple's work for it, may save the day with its TransWarp GS accelerator. I tested a preproduction model briefly, and improvements such as scrolling a layout in 2.5 seconds versus 6 seconds made the program seem truly usable. (See this month's Editors' Choice, p. 112.) But the TransWarp will push your hardware investment to about \$3500—a point at which, to say something I never thought I'd say, the Apple IIc Plus starts looking good.

For now, AppleWorks GS' fatal problem isn't Claris' fault: It's the thousands of people happily using AppleWorks, some TimeOut addons, and Publish It!. They don't need AppleWorks GS, and they won't wait for it.

MultiScribe

Class by Itself

It's big, it's powerful, it's adaptable—yet its modular design makes DB Master Professional not only the most sophisticated database manager you'll find for your II, but one of the easiest to use, as well.

by Gregory R. Glau

ver see that TV ad for an airline that shows a man talking on the phone, saying, "Pittsburgh on Monday? I can do that. Boston on Tuesday? I can do that. Phoenix on Wednesday? I can do that." He hangs up, then grabs for the phone again and asks, "How can I do that?" The answer, of course, is the air-

line—that it'll help this businessman get where he needs to be, when he's supposed to be there.

In the world of information management, DB Master Professional operates just that way: It helps you do exactly what you want with your data, when you want to do it. The

DB Master database manager has been around in one form or another for quite a while (see Editors' Choice, July 1988, p. 96); for the past seven years we've used it in our small heating-equipment business to track warranty records. This latest version of the program (prerelease 5.5 discussed here) shows how good software can evolve—grow more and more capable without forcing you to buy new hardware. Whether you have two $5\frac{1}{4}$ -inch floppies, two $3\frac{1}{2}$ -inch disks, or a hard disk, whether you have a IIc, an enhanced IIe, or a new IIGS, you can take full advantage of the power of this program.

DB Master Professional is something of a study in contrasts. The documentation's an imposing 712 pages, yet you'll be up and using the program within just a few minutes. You get the dynamism of a relational database, in which one file can access and import information from other files—yet you can design screen layouts and file parameters quickly and easily. You get a sophisticated reporting capability that will summarize your data just about any way your business requires, yet it's broken down into modules that let you pick and choose among pieces of information and decide exactly how simple or complex your report will be. This software grows with your needs; you can redesign the structure of your database ightharpoonup

as your business expands. The program even includes a global editor, if you want to change something in all records at the same time.

DB Master Professional claims to be the only Apple II program that lets your files extend over more than one disk—up to 50 if you need them—yet the program always knows what's where. If you have a floppy system, it usually doesn't matter which disk (program

have been broken into two or more smaller units, DB Master Professional can convert and combine them into one complete file.

The system sports a lot of nice touches—carefully designed details that make database management easier and simply more professional. For example, the software can convert dates to spell out the month—you'll never wonder whether 10/11/89 means October 11

or November 10, because DB Master Professional can show it as 10-Nov-89. If you'd like your forms to display the last date on which you edited data, DB Master Professional can do that automatically. You can scroll through your records in either direction, display them on screen, or get a hardcopy from your printer.

You can design *browse forms*, as well, which let you call up your records in any format you find useful. You can also ask DB Master Professional to pull just the statistical summaries from your files, for those times when you want to see the forest, but don't want to walk through all the trees to get there.

ON-THE-JOB TRAINING

How do you harness all this power? Start with the manual. It looks fearsome, but it's filled with good, clear examples. DB Master Professional starts you off with an introduction to records, fields, and so on. By page 10 of the 163-page tutorial section, the program has you entering and saving data in a sample file. A few pages later, you're searching for information. You learn DB Master Professional by using it.

One hundred thirty-five pages of reference material follow. That's not the end, though; nine pages of "things you can do" key operations you might want to perform to specific headings in the glossary, which is 373 pages long. I didn't much care for the glossary idea when I first saw it—I expected it to be just a list of definitions. This one's different, though: DB Master's glossary provides detailed information about every facet of the package—each feature and function, along with how you access it and use it.

DB Master Professional also provides what it calls dynamic prompting, lines at the bottom of the display listing your available options. You don't have to remember commands when you want to add a record or search for something—choices are always listed on screen.

FILE DESIGN

Its visual approach to designing on-screen forms sets DB Master Professional apart from ordinary database managers. Type a field name; then, using the arrow keys, position it exactly where you want. What could be simpler?

The program allows 2000 total bytes per record. (One byte is roughly one character.) Each record can contain up to 200 fields,

Top, choices are grouped for convenience on DB Master Pro's main menu. Middle, design your own screen: Place any field in any position. Bottom, completed record shows a variety of data formals.

or data) you put into which drive. On a hard disk (DB Master is non-copy-protected), you can access files as large as 10 megabytes.

If you've been using an older version of the program, it's good news that DB Master Professional has the same command structure: <Control-A> adds a record, <Control-F> finds a record, and so on. You can also update your existing DB Master Version 3, 4, 4 Plus, or 5 files to fit the new software. The program converted 369 of my DOS 3.3 warranty records to the new format in just a few minutes, and the process was completely menu-driven.

DB Master Professional will also convert your AppleWorks files, and can exchange data with programs that can save their information as DIF (data-interchange format) or ASCII files. If your files spread over as many as 30 pages (screens). The sequential-page concept is particularly useful when you need to separate data—job costs on one page and all retail information on another, for example. That makes it easy to print only those data you want your customer to see.

A "sales-receipt" option prints a copy of the record, which you

can also include in any other report format, immediately after you enter it into the system. DB Master Professional also provides several levels of password protection, so you can restrict who's allowed to read your files and write to them.

If 2000 characters per record isn't enough, you can use DB Master Professional's relational capabilities to send data from one record to another. That lets you store things that don't change—names and addresses, for instance—in one place, and transfer that information somewhere else when you need to.

DB Master Professional allows computed, or calculated, fields, up to 99 per file: Just enter the formulas and the program recalculates automatically. To put 6 percent sales tax into field 7, based on a number in field 4, for instance, enter F7 = F4 * .06. The figure in field 4 can itself be a computed field.

The software also allows user-defined fields, which let you prescribe in exact detail what will be allowed (or not allowed) in a particular field—only numbers or letters, for instance, or only uppercase.

Other options include date fields (your choice of 11 formats), fields that accept only a yes or no answer, fields that display in dollar-and-cents format, even fields that allow entries only within a user-specified range of data (either numeric or alphabetical). DB Master Professional even gives you complete control over the way the cursor skips from field to field as you enter data: sequentially from first to last field as each appears on screen, or any other order that's more efficient.

DB Master Professional also lets you work with lookup tables—asking the program to display an item's description, wholesale price, and

retail price, for example, all when you enter just the inventory number. For payroll, you could ask the system to look up a worker's name, wage, and other data when you enter that person's employee number.

The program provides two types of defaults— one in which a standard item is put into every field you specify, and one in which your last entry is duplicated in the current record. If you want to design a file in which the city, state, and zip code will usually be the same, DB Master Professional will enter those data for you. The program can copy all or just selected data from one file to another, as well as make a blank copy of the record format (without any data), which you can then use for a different purpose.

Perhaps DB Master Professional's most powerful feature is its relational capability, which lets you import or export data from one file or several to another, or to a report. A file can have up to 50 relational rules, involving up to nine other files. The process is surprisingly easy—it's all menu-driven. The only thing you really have to remember is that field lengths and types must

Top, spreadsheet-style report format with calculated fields. Middle, print checks, point-of-sale receipts, and other financial documents. Bottom, with its impressive array of ProDOS utilities, anything the Filer can do DB Master Pro can do better.

match in both files. It's cumbersome with floppy disks; the manual recommends a hard disk if you're to use relationals effectively.

DB Master Professional includes form-letter mail merge that lets you send personalized letters to just those people in your files you designate. It's as easy as typing in your text. The system includes "conditional" printing, as well, which lets you send all or parts of personalized letters to different people in your files, depending on the information in their records. It's also quick and easy to design and print mailing labels (one or more across).

THE NEXT GENERATION

The reports you receive, based on the information in your

ADVANCED LOGIC SYSTEMS ONE OF THE FIRST...ALWAYS THE BEST

database, can be only as useful as your information and your forms are organized. In some database programs, the report process is awkward, especially if you have to design a complete format, including sorting and selection conditions, for each report. DB Master Professional, however, splits the process into four modules, an approach that lets you pick and choose exactly

•

Table. DB Master Professional sort criteria.

what you want to display or print, without designing a huge number of individual report formats.

First, the reporting part of the package is similar to form design: You see a window on screen, with a list of field names below it, and you select what you want the report to print and where on the page you'd like to see it. You can add comments, headers, footers, and the current date to any report. You can also request that specific information be printed in italics or boldface, or that numbers print in a dollars-and-cents format. You can specify the number of trailing zeroes, or what to print if a field is empty. The report-layout function also allows conditional printing, using if/then/else logic. In an accounting system, this lets you print one message on a customer's statement if the account is current, or else print another if it's past due.

The second part of any report is the sorting format—the way you want your information ordered. You can sort on any field (up to nine at a time) and even specify case sensitivity.

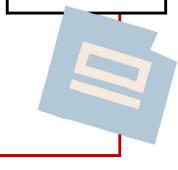

In DB Master Professional's third report module you tell the software the data you want to select. Do you want to examine or print all records, or just specific ones? And if you want to look at and pull out only certain records, what are they and how do you want to select them? See the accompanying Table for a partial list of selection conditions.

Finally, select a print format. Tell the software the slot in which you've installed your printer and choose a printer driver-type of printer and print mode.

PRODUCT INFORMATION

DB Master Professional

Stone Edge Technologies P.O. Box 200 Maple Glen, PA 19002 (215) 641-1825 \$10 demo disk Reader Service No. 340

Once you've defined any number of each of these four modular formats and named each one, you're ready for a master report format. From a list of the "module names" the program displays, mix and match print-layout, sort, selection, and printer formats. You can save up to 255 master report formats for each file.

What this flexibility means is that you can create any number of any type of format, and mix and match them any way you need to. If you want all reports printed one way, create just one print-layout design and use it with any number of, say, selection formats, or any number of sort formats. You don't have to re-create a whole report each time you want to change one thing. In the end, this results in better data management: You won't hesitate to examine your information in different ways,

because you can get your data from the system whatever way it's most useful to you.

THE BOTTOM LINE

You'll be hard-pressed to find any real weaknesses in DB Master Professional. It could use more-detailed on-line help screens, perhaps; what you get now when you ask for assistance is a small box showing the page number in the manual where information is located. I did get lost now and again when I asked to change files and pulled the wrong floppy out before the prompt. To the program's credit, it never lost any data-I just had to get back to the main-menu screen and open the file again.

Every application has its own quirks and capabilities. Rarely, though, will you encounter a program as powerful yet easy to use as DB Master Professional. The bottom line? For data management on your Apple II, it's in a class by itself.

Why Buy From Us?

- 1. Toll free 800 number for orders.
- 2. We almost always ship from OUR stock. Call us before 3 P.M. and it ships today.
- 3. Memory cards have <u>all</u> factory installed and tested RAM chips.
- 4. We're nice guys that want to help. We want our business to grow because of repeat customers and word of mouth.
- 5. We handle only the industry's best. We've tested and used all of the products we sell.
- on all hardware. If you don't like something, we'll give you your money back. No hassles. We'll support, service and warranty every-
- 8. No surcharge is added for charge cards and we won't charge your card until we ship.
- 9. No sales tax is collected on orders outside Texas
- 10. All shipments insured buy us. 11. Satisfied Customers. "I am truly impressed with your company! I 'm astounded at the speed with which I received my order. I know where to go next time I mail order com-puter equipment!" Timothy A. Griffin " I would like to compliment you on your good

technical support. With service like this, when I add more features to my computer in the future, Preferred Computing will be high on my list" Daniel Riley

Preferred Computing

We have it all!

RAMUP 4.0

RAMUP 4.0

Utility software that automatically combines all your ProDOS programs onto an Apple-compatible Ramcard to make them work as one. You just flip from program to program at will like turning a page.

Special features include:

- Autoload
- Back Up and
- Unidisk and Hard-Disk compatibility
- Restore Statistical displays

EasyDrive The first and only complete interface for the hard-disk. Nothing is faster or

easier. For smooth, trouble-free operation, EasyDrive is a must.

- Automatic installation
- · Back Up and Restore
- Caching Mouse
- Control
- · Automatic loading Statistical
- Displays Optimizing
- ProDOS Book

\$69.95

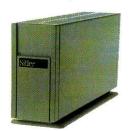

Match wits with speed and storage. Find out about the RAMUP/EasyDrive Combo — \$94.95.

any price

CMS HARD-DISKS Reliable, Mac-compatible drives have multi-user capability. Includes: auto parking, SCSI and internal fan. 20, 40 and 60 meg.

ULTIMATE HARDWARE

SIDER HARD-DISKS Four years as top selling brand. Includes: multiple operating system (D2). 20, 40 and 90 meg. 60 meg. tape back up available separately or included in some units.

CHINOOK HARD-DISKS Compact, reliable drives, Includes: auto parking, SCSI, and are Maccompatible. Comes in 20 and 30 meg. plus a 20 meg. model for the IIc and IIe. Free EasyDrive with every

ULTIMATE SERVICES

To complete this "ultimate picture", we have filled our staff with real professionals. Our sales people, technical consultants, and shipping department work together to satisfy all your needs. Your orders are processed and shipped quickly. Your questions are answered

completely, and in terms you can understand.

Call Quality Computers and you'll discover: extended warranties, 30 day money back guarantees on everything we sell, immediate replacement of defective items, and a free

subscription to Enhance, our technical newsletter.
ATTENTION HARD-DISK BUYERS: Ask about hard-disk set ups. We'll format and configure your hard-disk for a price you just can't beat. Also, prevent extended down time with our hard-disk insurance plan. You'll never be without the power and convenience of your harddisk. Call for details.

Do You Need a HARD-DISK DRIVE?

Serious Apple II users need the speed, storage, and organization a hard-disk drive offers. In part 1 of a three-part article we'll show you what to look for before you buy.

By JEFF CABLE

emember the first time you saw a 51/4-inch floppy disk? How could that little piece of plastic store more than 70 pages of information? You probably thought you'd never need another disk drive. Then you discovered 31/2-inch disks, to the tune of 800K apiece—about 400 pages of text. If you're racking up thousands of pages, though, it might be time to take the next step—a hard-disk drive.

No one disputes the convenience of a hard-disk drive, but when does is it become a necessity, not just a luxury? If your collection of program and data disks has swamped your computer table and you're constantly searching for a misplaced floppy, or your AppleWorks database has just grown to 450K, you're a candidate for a hard-disk drive. If you're saying to yourself, "I don't have anywhere near 20 megabytes of programs and data," remember that a hard-disk drive is like a garage: No matter how big you think it is, it always seems to fill up fast.

AT YOUR FINGERTIPS

Whether you own an Apple IIe, IIc, IIc Plus, or Apple IIGS, a hard disk makes your computing life easier in six ways. First is the convenience of putting the various parts of a multidisk program all in one place (if it's noncopy-protected). As Apple II software grows more and more

sophisticated, the complex code that gives you all those extra functions is taking up more and more space. It's particularly noticeable with GS programs, but even the latest 8-bit programs, such as Timeworks' Publish It!, may come on as many as four double-sided floppies. And if you're an avid AppleWorks user, you'll find you can add only so many accessories before you start to fill up even a $3\frac{1}{2}$ -inch disk.

Perhaps the most obvious example of a program crying out for a hard-disk drive is AppleWorks GS. Thousands of people have recently purchased or upgraded to Claris' six-in-one integrated package. When booting AppleWorks GS with only one disk drive, you have to swap between the system and program disks constantly. It's even worse if you're using the spelling checker or thesaurus—you have to insert a third disk, the one containing the dictionary. Using a hard drive, though, you just open the package, install it on the disk, and start working without swapping anything.

Second, if you use several programs often, you can load them onto your hard drive and then forget about having to find the floppy disks you need. If you own an Apple IIe and IIc, for example, you might have ProDOS as well as software such as AppleWorks, BusinessWorks, Beagle Bros' TimeOut Series, Pinpoint Desk Accessories, and Copy II Plus among the programs installed on your hard disk. If you have an Apple IIGS, you might install GS/OS, AppleWorks GS, Paintworks Plus, AppleWorks 2.1, some games, MultiScribe GS, GraphicWriter, and Medley, as well as a selection of fonts and desk accessories.

HARD-DISK DRIVES

When you install several software packages on a hard disk, it's a good idea to create a new folder (or *subdirectory*, a file containing the names and locations of other, related files on disk) for each. This organizes your hard disk and creates a logical structure within which you'll distribute your data files. Without folders or subdirectories, you'd end up with hundreds of data files on the hard disk's main directory and you wouldn't know which ones belonged to which program.

A related advantage is the instant availability of fonts and desk accessories. You'd have to install them on each startup floppy, but a hard disk uses only one system folder, and therefore carries the proper addons into each program you enter from the drive. (If you've installed more than one system folder your hard drive won't know which to access and will respond with system-error messages.) For example, if you install 30 fonts or desk accessories on a hard disk for your Apple IIGS, you then have them available in all standard GS programs (those with the Apple menu bar at the top of the screen), from paint packages to word processors.

THE ELECTRONIC FILE CABINET

Fourth, your hard disk is ideal for storing large data files—customer or mailing-list databases, for instance, that would each exceed the size of a floppy. What's the difference? The capacity of floppy disks is measured in kilobytes (1K is approximately 1000 bytes). A 51/4-inch disk holds 143K; a 31/2-inch disk holds 800K of information. Hard disks, on the other hand, are measured in megabytes (1000K of memory). Three years ago the most common hard disks were 5 and 10 megabytes. Common sizes today are 20 and 40 megabytes; many companies also sell 30-, 60-, 80-, and 150-megabyte hard disks, as well.

Until recently, ProDOS recognized only 32 megabytes of disk space. (GS/OS, a 16-bit ProDOS-type operating system for the HGS, lets the machine handle larger-capacity hard disks with no problem.) To overcome this limitation you can "partition" a hard disk into multiple volumes of less than 32 megabytes each. A 60-megabyte hard disk, for instance, becomes two 30-megabyte volumes or three 20-megabyte volumes—one for games and entertainment software, another for utilities, and a third for productivity software and its related data files, say.

Fifth, your hard disk's multimegabyte capacity means you can stash large numbers of data files there, as well. If you're using your II to run a business, for instance, you can't do without a hard disk—storing information for hundreds of clients would leave you swimming in a sea of floppies. Again, it's important to set up organizational folders or subdirectories, perhaps one for each client or family member. Using a hard-disk drive without subdirectories is like trying to find an unfamiliar city without a map.

The sixth major advantage is the time you'll save in disk access. Unlike floppy-disk drives, hard disks remain fixed in their cases; you never see or remove them (although this is changing with the introduction of removable hard disks). Inside the casing is a large, rigid disk that spins continuously at high speed while read/write heads hover over the surface. (See the accompanying Figure.) The process is similar to floppy-disk access, except that the cylindrical hard disk and the read/write heads operate at a much faster rate. A hard-disk spindle rotates at upwards of 3600 revolutions per minute (rpm), while a floppy disk, after taking a second to get started, spins at only 360 rpm.

What does 3600 rpm mean for the user? Information access on most 20-megabyte hard disks takes approximately 65 milliseconds (thousandths of a second), while 40-megabyte drives average 25-40 milli-

seconds. That's three or four times the speed of Apple's 3_2 -inch drive. In general, the higher the disk capacity, the faster the drive.

WHICH ONE?

The particular Apple model you use narrows your range of choices among hard disks; the IIc and the IIc Plus can't use the same disks as the expandable IIe and GS. Because the IIc is a closed system, you can't add the interface cards that are necessary for many of the drives on the market. If you own a IIc, you need to find a drive that attaches to one of the computer's built-in ports.

In addition, you'll find two types of interfaces: proprietary and SCSI (pronounced scuzzy, small-computer-systems interface). A proprietary

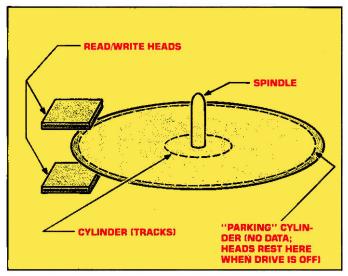

Figure. Anatomy of a hard-disk drive.

interface (in the form of a plug-in card) usually works only with that manufacturer's hard-disk drive and only in your Apple II or II compatible. If you buy a Macintosh or an MS-DOS computer, for example, you can't just plug in the hard disk unless the manufacturer also makes an interface card for that particular system.

SCSI is a standard that comes in different flavors. If you think that sounds contradictory, you're right. In theory, any computer equipped with a SCSI interface will work with any SCSI hard-disk drive. Some companies, however, have developed proprietary versions of SCSI. You may have to buy a company's SCSI card with the drive.

One example of a SCSI standard is Apple SCSI. If you buy a harddisk drive that follows the protocol for Apple SCSI, the drive will work with both the Mac, which has a built-in SCSI port, and your II if it's equipped with an Apple SCSI card. If your friend says he'll give you the SCSI drive he's using with his IBM PC, though, don't expect it to work with your Apple system.

In the next issue of *inCider* we'll explore the differences among drive models and compare SCSI and proprietary hard disks from ten manufacturers. If you're ready to opt for the convenience and speed of mass storage, take a look at part 2 and we'll help you make some decisions.

Jeff Cable, inCider's West Coast editor, is an application specialist and free-lance computer consultant. Write to him at Wolf Computer, 105 North Santa Cruz Avenue, Los Gatos, CA 95030. Enclose a stamped, self-addressed envelope if you'd like a personal reply.

Break into Apple Headquarters. You'll get 30 days.

AppleLink®—Personal Edition—your online connection to Apple Headquarters.

These Apple® II users have just broken into Apple Headquarters. (And they're getting away with it. Risk-free. For 30 days!) With AppleLink—the direct line into everything that makes Apple so unique—the products, the people, the sense of community.

And right now, you can experience for yourself AppleLink's exciting lineup of services for home or business — and get 30 days with this special trial offer.

Connect your Apple II to everything Apple.

Let's get more specific.

First, there's the Apple Community where you can get the latest update of what's going on in — and what's coming out of — Apple (lots). You can chat with Apple staff or catch special presentations by Apple notables (like Woz, himself).

You'll get online help and product support directly from the biggest names in Apple II software publishing. Then, visit the software library where you can download an impressive selection of programs.

And that's just for starters.

In General Services there are endless possibilities. Look up facts in the up-to-date online encyclopedia. Make travel reservations. Get current on the latest-breaking news. Comparison shop for bargains in a 250,000-item online department store...to name just a few.

- *To use AppleLink software you need an Apple IIe. IIc. IIc. Plus or, IIc. © computer with Hayes-compatible modern. Apple IIe systems require enbanced ROM. 128K memory: an 80-column text card and a Super serial Card. You must bave a VISA. MasterCard or checking account for AppleLink registration. Allow six to eight weeks for delivery.

TAX TIME

As the IRS swoops down for the kill, smart Apple II users take shelter—in taxpreparation programs that'll help you organize your records and fill out those forms.

By CYNTHIA E. FIELD

T'S BEEN CENTURIES SINCE SHAKESPEARE'S Macbeth uttered the timeless sentiment "If it were done when 'tis done, then 'twere well it were done quickly." But in 1989 those words still ring true, whether you're contemplating some vengeful act—or your annual income-tax return.

Most of the dozen time-saving tax-preparation programs reviewed here are geared toward the do-it-yourself taxpayer, but some of these products also offer quick data entry or batch-processing options that make them suitable for professional preparers. (We used "year-old" versions; 1989 updates should be available now.)

Like other types of productivity software, tax programs vary in performance, hardware requirements, and price. See the accompanying **Table** for a detailed program comparison and a checklist of the IRS forms and schedules each supports.

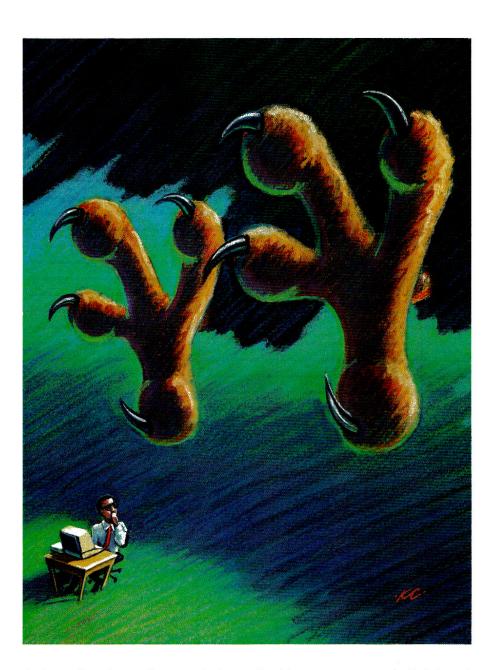

About half the products we looked at are spreadsheet templates requiring a separate program (**AppleWorks** or **Multiplan**) to run. Templates use the same commands as the "host" software; because they're files and not programs in their own right, templates are usually inexpensive, too.

With an AppleWorks template, for example, type in tax data where appropriate, press Open apple-K a few times, and watch calculated values fill in automatically. Formula-containing cells are tamper-proof, so you needn't fear deleting critical mathematics. Printing a tax form is as easy as using the Block command to highlight the area, then pressing Open apple-P to print it.

While tax-preparation software in general performs automatic, speedy calculations according to the regulations spelled out in the Tax Reform Act of 1986, few programs provide tax advice, though at least two software publishers package respected tax handbooks with their programs.

Some products offer planning features, as well—built in or available at extra cost—for performing tax projections during the year. The home-accounting program **Managing Your Money** offers a tax-planning module, but doesn't complete or print actual returns. In addition, some tax packages import information from AppleWorks spreadsheets or home-finance programs if

IT'S CLOSING IN

they're configured properly to smooth the transfer of data.

Tax programs print your individual federal income-tax return (few programs offer state modules) and usually provide several options for completing this task. Ordinarily, the IRS requires you to submit an original Form 1040, not a computer-generated facsimile. Most programs

can fill in the blanks on an original Form 1040 or print data on blank paper. Overlay this printout with a Form 1040 transparency and make a photocopy. An alternative for professional preparers is the tractorfed Form 1040 business stationers sell. Most tax-preparation programs print nonsignature forms and schedules in IRS-acceptable style on green-bar or lined paper of minimum 18-pound weight.

If you don't own a printer, consider using a tax program to perform calculations even though you'll have to transfer data manually from the computer screen to the appropriate IRS form.

Here's a brief look at the dozen "something for everyone" tax-preparation programs available this season.

1040WORKS

If you already know your way around AppleWorks spreadsheets, save time and money with templates such as 1040Works or 1040Works X. (For a preview of an AppleWorks spreadsheet template that assists in completion of Canadian personal income-tax returns, see the accompanying sidebar, "Tax Analysis Canadian-Style.")

Developed by Phineas R. Fiske, a certified financial planner, 1040Works (128K required) and 1040Works X (256K required) help you prepare nearly 20 of the most commonly required federal tax forms

and schedules and generate printouts of nonsignature forms in IRS-acceptable format.

According to Fiske, about half his customers opt for 1040Works X with its main, integrated, 78K spreadsheet module containing Forms 1040, 2441, and 6251, as well as Schedules A, B, D, E, and SE. The

Parallel Pro™

The Most Powerful Apple Printer Interface You Can Buy

When you're trying to find the right parallel interface for your printer, look to Applied Engineering to bring you the best in quality and features.

· Compatible with Apple IIe, IIGs, and II+ (works in any slot except 3). • Fully compatible with ProDOS, Dos 3.3, Pascal, and CP/M. • Works automatically with virtually all software. Supports almost all parallel printers including: Epson, IBM, Okidata, C. Itoh, NEC, Star Micronics, Toshiba, and more.

· Conforms fully to the Centronic Standard . Built-in control panel allows easy access to set-up information • Automatic formatting of basic listings.

- Built-in self test and Buffer Pro™ support.
 Extensive graphics print capability for the hi-res, double hi-res, and the IIGs super hi-res screens. • Buffer option available (see below).
- Includes 6-ft. cable for connecting to your printer.

Buffer Pro™

Buffer Pro adds memory to Parallel Pro, freeing your Apple from running the printer. With Buffer Pro, you can continue to use your Apple while the printer is printing. To add Buffer Pro to Parallel Pro, simply unplug the

cable on Parallel Pro and plug Buffer Pro where the cable was, then plug the cable onto Buffer Pro, That's it!

- · Compatible with He, IIGs, and II+. · Fits in a IIGs with or without fan. • Adds 32 to 256 pages of printer buffering.
- User expandable using 64K or 256K RAM chips one chip at a time and in any combination. Each 256K chip adds 32 pages (maximum of 8 chips). • Connects directly to Parallel Pro. • Works automatically with virtually all software • May be paused or cleared with simple commands (unlike other buffers, you don't have to "shoot the computer" if you want to stop the print-out before it's done).

Both Parallel Pro and Buffer Pro come with a comprehensive manual, a 5-year warranty - parts & labor, and outstanding technical support if needed.

Parallel Pro	\$99.00
Buffer Pro Option: with 32-page buffer	109.00
with 128-page buffer	159.00
with 256-page buffer	219.00

ax programs vary in performance, hardwar requirements, and pric

128K version, 1040Works, splits this template into two separate files. In either case, self-employed individuals will find Schedule C in a separate template file.

With 1040Works or 1040Works X and an expanded AppleWorks desktop, you have room in memory to load any of Fiske's predefined AutoWorks, MacroWorks, Super MacroWorks, or KeyPlayer macro files. (A macro is an abbreviated command, a short series of keystrokes that substitutes for a longer one.) One such time-saving "shorthand" command prints your name and Social Security number on each form automatically.

Fiske's templates include messages such as "To tax forms →" and "This is Schedule B" to help you find your way around these multiscreen spreadsheets. The program's documentation also includes a "road map" for orientation.

Use the separate financial-organizer template to keep tabs on taxdeductible items during the year, then move that information via 1040Works' Data Transfer Port to the Schedule A area on the main template at tax time. An Interface template imports data from the homefinance programs Dollars and \$ense, On Balance, and Quicken.

Fiske's products come with a couple dozen sheets of continuous greenbar paper and a word-processing template to create lined paper from blank stock.

KFS/TAX

KFS/Tax from Kronk Financial Services is another series of highquality, reasonably priced AppleWorks templates. Like 1040Works and 1040Works X, KFS/Tax forms are laid out horizontally on the spreadsheet; an on-screen directory helps you locate them.

The program's main, integrated, 49K template (Individual.Tax) holds

Tax Analysis Canadian-Style

Canadian AppleWorks users, take heart! Robert Rutkay of Granite Software (Box 105, Postal Station T, Toronto, Ontario, Canada M6B 3Z9, 416-785-1746, GEnie: GRANITE) says he created Tax Analysis "out of frustration" over the lack of products available for automating the preparation of Canadian personal income-

Rutkay's spreadsheet template is arrranged in four "zones": a 70-question Questionnaire, the T1 General Form and Provincial (except Quebec) Tax Forms, the eight Schedules required by Revenue Canada for 1988, and Miscellaneous Tax Calculations and Tables. Point-

Some tax products are templates files that use the same commands as their 'host' software."

the schedules and forms most taxpayers require and fits easily on an unexpanded AppleWorks desktop running on any 128K Apple II.

Separate templates, Business. Tax and Suppl. Income, handle businessrelated forms (Schedules C and SE and Form 4562) and rental real-estaterelated forms (Schedule E and Forms 8582 and 4562), respectively. Less frequently used forms are included as individual templates.

KFS/Tax comes with two Planner spreadsheets for forecasting taxes for the current year and one year hence. You also receive enough greenbar paper to prepare your return and a utility for generating lined paper. One significant feature that's hard to beat is Kronk's "satisfaction guaranteed" refund policy.

TAXMASTER

Oriented vertically instead of horizontally, Taxmaster and Taxmaster.Pro templates work more or less like those previously described, but they don't yet match the standard of quality set by 1040Works, 1040Works X, or KFS/Tax.

Taxmaster's computer-generated forms and schedules print in elite type size and don't resemble IRS-approved forms closely enough. At press time, product developer Douglas M. Smith of Island Computer Services indicated that the company was correcting this deficiency and improving the program's loosely written documentation.

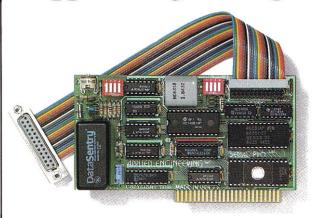

These criticisms aside, Taxmaster and Taxmaster.Pro aren't without merit. Taxmaster.Pro offers one particularly nice feature: separate templates for clients with differing tax needs. One template, for the "average" taxpayer, contains Form 1040 and Schedules A and B; another, for a selfemployed individual, groups the 1040 with Schedules A, B, C, and SE. Yet at \$50 and \$75, respectively, Taxmaster and Taxmaster. Pro seem overpriced and underfeatured compared to the competition.

ers and notes tell you where to enter data.

Like the U.S. tax-preparation programs described in the accompanying article, Tax Analysis automatically handles the calculations that determine your tax liability and can be ideal for making tax projections during the year. It prints working facsimiles you use as references when transferring data to the actual government forms you submit.

Available in 51/4-inch format, Tax Analysis runs on the Laser 128 as well as the Apple IIc, enhanced IIe, or IIGS. It's priced at \$27.50. According to Granite Software, any version of AppleWorks will do. [

Serial Pro® The intelligent multifunction card from Applied Engineering.

Serial Pro is a powerful multifunction card for the Apple IIe, II+, IIGs and compatible computers. Serial Pro combines a powerful serial port for interfacing to a printer, modem or other serial device, with a full function clock/calendar. Serial Pro's serial port is compatible with virtually all letter quality and dot matrix printers, including Apple's Imagewriter and Imagewriter II, and can communicate with the fastest external modems at baud rates from 50 to 19,200.

Set up is easy, because unlike other cards, there are no switches to program serial parameters or disks to use. Serial Pro has a built-in setup screen that allows all parameters to be set. And onscreen help that makes it super-easy. An on-board battery stores your selections for over 20 years, but you can change them at any time. Serial Pro is the perfect upgrade for Super Serial card owners looking for more performance or a built-in clock

Serial Port Features • Fully Super Serial Card compatible but Compatible with printers more versatile and easier to use Compatible with modems
 Prints graphics to printer (without software) in normal mode, 90° rotation, double size, side by side, and black/white inversion . Variable word length, number of stop bits and parity selection • Crystal controlled circuits are used to provide ultra accurate baud rates.

Clock Calendar Features • ProDos, DOS and AppleWorks compatible. Displays time and date on the AppleWorks screen Automatically time and date stamps AppleWorks files
 20 year auto recharging nickel-cadmium battery • Realtime interrupts . Built-in on screen time and date settings (no software needed) • Does not use phantom slots.

Serial Pro is perfect for Apple IIe, II+, IIGs or compatible owners in need of a serial port or clock/calendar or both. But unlike other multifunction cards on the market, Serial Pro does not use phantom slots, so all the slots in your computer are useable.

Serial Pro comes complete with manual and instructions for interfacing to all the leading printers and modems.

With the Z-80 Plus, run over 5000 new CP/M programs.

Now, get two computers in one, and all the advantages of both.

E nter the CP/M world with the new Z-80 Plus card from Applied Engineering, and introduce your Apple IIe, IIGs or II+ to thousands of CP/M programs. Only the Z-80 Plus comes standard with the new 5.1 software, the most advanced system ever for running CP/M programs.

The new 5.1 boasts advanced features like built-in disk emulation for popular memory expansion boards, boosting both system speed and storage capacity. And menu-driven utilities that let you get to work faster. The Z-80 Plus also lets you run older CP/M programs—all the way down to Version 1.6 (2.2 is the most popular).

The Z-80 Plus is the only card on the market capable of accessing more than 64K. If you have an extended 80-column card, all 128K is usable. And if you have RamWorks, RamFactor, gsRam, gsRam Plus, or an Apple memory card in your IIe, IIgs or II+, up to 1088K is available.

Each Z-80 Plus comes with our CP/M Ram Drive software, enabling most memory cards to work as a high-speed Ram disk so CP/M software can run up to *twenty times faster*: So packages like WordStar, dBASE II, Turbo Pascal and most others run at blinding speed.

Simply plug the Z-80 Plus into any slot in your Apple. You'll get the benefits of two computers in one—all at an unbelievably low price (only \$149!).

Fully compatible with ALL CP/M software
 Fully compatible with 5¼" and 3½" disk drives as well as most hard disks including the Sider
 Fully compatible with Microsoft disks (no preboot required)
 Specifically designed for high speed operation
 Runs WordStar, dBASE II, Turbo Pascal, and ALL other CP/M software with no pre-boot
 Semi-custom I.C. and low parts count allows Z-80 Plus to fly through CP/M programs with extremely low power consumption (we use the Z-80B)
 Does EVERYTHING other Z-80 boards do, plus Z-80 interrupts

Five-year warranty

To get your Z-80 Plus or for more information see your dealer, or call 214-241-6060 9 a.m. to 11 p.m. seven days, or send check or money order to Applied Engineering. MasterCard, VISA and C.O.D. welcome. Texas residents add 7% sales tax. Add \$10.00 outside U.S.A.

do-it-yourself taxpayer,

EZTAX-PREP 1040

The most powerful of the tax template packages, **EZTax-Prep 1040**, is weakened by its dependence on the now-discontinued spreadsheet program Multiplan. If you own Multiplan, however, take a close look at this product, especially if you're a professional tax preparer. (According to EZWare Corporation, about 58 percent of its customers are.)

EZTax-Prep 1040 completes nearly 30 forms and schedules and includes professional tax-service features such as batch processing, a client letter, and a tax-organizer data form. Audit Alert, a function unique to EXTax-Prep, compares itemized deductions on a given return to those taken by an average taxpayer with the same adjusted gross income, as reported by the IRS.

TAX PREPARER

A powerhouse program, Tax Preparer from HowardSoft features an incomparable level of automation. With some two dozen built-in forms, the program performs up to 300 automatic transfers of data, negating the need for duplicating entries manually. The latest restyled version of the program exploits memory beyond the minimum 64K required and processes calculations at the speedy machine-language level.

Accommodating various working styles, Tax Preparer offers a Road Map entry path for beginners. Branch off sequentially to appropriate forms and schedules from the on-screen facsimile of the 1040. An alternative mode lets you select any schedule or form at will.

FOR THE II+

There used to be a dozen 80 column cards only the best survived

Viewmaster 80™

There's a good reason why Viewmaster 80™ has left the competition in the dust . . . total compatibility. From our free AppleWorks enhancement software to our famous warranty and complete technical support, Viewmaster 80 stands head and shoulders above any other 80 column card.

The powerful software we include allows your II+ to run AppleWorks with as little as 64K (or more) of memory. (We recommend the RamFactor memory card, but any compatible Apple memory card will work). AppleWorks runs with expanded records and word processor lines, and added features like multi-disk savings, time and date display with any ProDOS clock and many, many more.

16K Pocket Rocket™

Also for II+ owners, our Pocket Rocket expands your internal memory 16K to 64K and allows your II or II+ to run ProDOS. It's fully compatible with Applesoft, CP/M and Pascal and the low

chip count reduces power requirements.

Lowercase ROM Chip™

Add lowercase capability to your II or II+ with AE's Lowercase ROM Chip. Fully supported by AppleWriter and other word processing programs, the chip makes communicating easier.

Also supported by AE's On Line 64 communications software, included with our DataLink™ modem.

Viewmaster 80			•			•							\$159
16K Pocket Ro	cket.												. \$89

- Experience innovative combat and exotic magic!
 - 2. Enter into the extraordinary world of Britannia . . .
 - 3. Unprecedented realism crafted in exquisite detail!

In Ultima IV and Ultima V, Lord
British weaves the spellbinding tale

of the Avatar – a quest for spiritual enlightenment and a test of virtue gone awry. It's one incredible story in two captivating games! And while each stands alone, together they deliver unparalleled intensity and incomparable depth.

The Avatar's epic tale expands the world of Britannia. While it still contains demons and devils, puzzles and pitfalls, and magic and myths, the heroes now face difficult moral decisions . . . and true character is revealed.

Ultima IV – Become an Avatar and inspire the people to reject the evil burning in their hearts.

Ultima V – The Avatar returns to a land of corrupted virtue – where the penalties are worse than the crimes!

"... once you play one, you'll want to play them all." (COMPUTE!)

Available for: IBM-PC/Tandy/compatibles, Apple II series, Commodore 64/128, Amiga, Atari ST.

Not available at your local retailer? Call 1-800-999-4939 (8am to 5pm EST) for VISA/MC orders; or mail check/money order (U.S. \$) to Origin. All versions \$59.95. Allow 1-2 weeks for delivery.

nce you've found a tax-preparation program that suits your style, you won't greet each New Year as the beginning of some sort of communal death row."

consistent with the current year's version. Consequences of the Tax Reform Act of 1986 are built in past 1990, letting individuals or professionals create instant "what if" scenarios with their own or their clients' tax situations.

Two high-volume methods of data entry are also available. A professional or a clerical employee can enter information for as many as 15 clients at a sitting and print the tax returns in a single batch, complete with client letter and billing statement-all unattended. Clearly not designed for the average individual, Tax Preparer works best for investors with complex tax lives and for professional preparers with highvolume businesses.

TAX SPREADSHEET

Tax Spreadsheet for the Apple II, the least expensive program reviewed here, is also the least capable. Type in an unanticipated entry and you're likely to get the unexplained message "***File Error 6." Taxpayer information entered at the outset can't be edited later without losing data. Here's an example of the manual's somewhat less-than-comprehensible style: "If you have a multiple-sheet printer which will do a form feed when ascii [sic] code 12 is sent to it, answer Y."

The program overly "condenses" IRS instructions. You'll need to cross-reference screen lines with actual government forms to answer even simple questions such as "Filing Status (1-5)?"

With Tax Spreadsheet's unsatisfactory error handling, "techie" documentation, and operational quirks, you may be better off doing your taxes the old-fashioned way-with a pencil, calculator, and a bottle of

TAX COMMAND PROFESSIONAL

Better still, take a look at Tax Command Professional, a menu-driven program that requires only 64K and performs calculations for more than a dozen forms and schedules, including two Schedule Cs and SEs for self-employed spouses or single taxpayers who run two businesses. For all taxpayers, the program determines automatically whether taking the standard deduction or itemizing on Schedule A is more favorable. Other automated features include reduction of medical expenses by 7.5 percent of adjusted gross income on Schedule A and disallowing more than \$3000 for a capital loss on Schedule D.

Tax Command Professional has a handy, four-function "calculator" built in. The program prints data directly on official IRS forms, but ▶

ou may even be able to coax Uncle Sam into underwriting the cost of this addition to your software library. Maybe revenge can be sweet."

you'll have to enter noncomputed information manually. Despite this minor inconvenience, Tax Command Professional's \$49.95 price tag makes it one of the least expensive stand-alone programs for Apple IIs with less than 128K.

THE TAX ADVANTAGE

Another easy-to-use menu-driven program, **The Tax Advantage**, comes with a self-running demonstration on disk to give you a feel for the program's operations.

Select from crystal-clear menu options and, when working on individual forms and schedules, use the command keys listed at the bottom of the screen: E to enter a value, I to itemize any line, H to access the program's on-line help. About the only awkward feature is the program's lack of support for the arrow keys; use the D (down) or U (up) keys instead.

The Tax Advantage prints directly on an original Form 1040 and underlines every other line on nonsignature forms to comply with IRS regulations. The program doesn't prepare completed forms, however. It prints a "greater than" sign in the margin of each form or schedule to remind you about information you need to fill in manually.

Designed for do-it-yourselfers, The Tax Advantage is nevertheless

suitable for small-scale tax professionals, even someone with a 48K, DOS 3.3-driven Apple II or II Plus. Not that The Tax Advantage hasn't kept up with the times: ProDOS versions in both 51/4-inch and 31/2-inch format are also available. The Tax Advantage offers an added bonus for home users—it imports data from The Home Accountant.

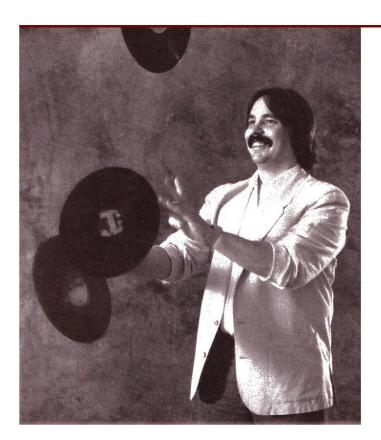

SWIFTAX

Those who eschew both spreadsheets and menu-driven interfaces might prefer Swiftax with its nonstandard pull-down menus: Press the right- or left-arrow key and the menu automatically pulls down; use the up- and down-arrow keys and Return to make selections. Swiftax doesn't support the mouse, though. Speedup keys, including Open apple-Up arrow and Control-S combinations (for moving to the top of a form and saving data, respectively) make Swiftax swifter.

Unfortunately, the two double-sided floppies packaged in the retail version demand a fair amount of disk swapping on one-drive systems. Users with higher-capacity drives can swap the 51/4-inch disk for a 31/2.

At press time Swiftax '89 was slated for a number of improvements, including screen facsimiles that mirror actual IRS forms more closely. The *Price-Waterhouse Personal Tax Advisor*, an easy-reader tax guidebook, is included free.

Everyday People on CompuServe

Have Fun.

If you're a kid at heart, join others just like yourself playing games on CompuServe. You'll find fun and challenging competition online all hours of the day or

night, in everything from space games to trivia contests.

Exercise your memory in the colorful trivia match, "You Guessed it!" Sharpen your empire-building skills in the popular MegaWars space "The idea of playing a space war game against real people immediately appealed to my competitive instincts. In Mega-Wars, when you go one-on-one combat with a player . . . there is only one ship left when the dust settles."

— Douglas Banker, Rock and Roll Business Manager

series. Use your intellect in role-playing games and explore the ever-changing Islands of Kesmai. Or participate in electronic Play-by-Mail adventures. You may even wish to gather up treasures playing British Legends. Call 800 848-8199 or see your computer dealer to join. You'll find CompuServe is really the only game in town.

Kick your Apple II into hyperdrive.

RocketChip launches your computer's capabilities into the outer reaches of the Apple II universe.

A revolutionary new accelerator-on-a-chip, RocketChip allows your Apple® II, II+, IIe or IIc to run at speeds only imagined before - up to 5 MHz!

Simply by replacing the 6502 or 65C02 microprocessor, Apple II users achieve nearly five times faster system operation for less cost than any speed-up board.

Boost your system to speeds competitive with state-of-the-art technology; competitive

with IBM® XT/AT,™ faster than Trans-Warp,™ 1.5 times the speed of a Mac+,™ and twice as fast as the IIGS.™

Compatibility

Got AppleWorks™? Spreadsheet calculations FLY. Got GEOS™? Mac-like graphics appear in a FLASH. Got Personal Newsletter™? Launch into desktop publishing FAST. Speed up all types of Apple software without costly hardware upgrades. RocketChip supports most peripheral hardware, works with any standard hard disk, and supports standard Apple operating systems.

Got an Apple IIc?

Feeling left out of the race? Bring your Apple IIc into the space age, with the ONLY accelerator technology that requires no slot.

RocketChip Features

- ▶ Accelerates ALL memory
- ▶ Low power CMOS technology
- ► Keystroke engage/disengage
- No distortion of program sound effects
- Variable speeds from 50 kHz up to 5 MHz
- ► Easy installation
- ▶ User programmability

Your computer is an intelligent tool. Why settle for slow intelligence when RocketChip can speed you into the forefront of computer performance?

f there's such a thing as love at first sight in the world of tax software, TaxView Federal IIGS will steal a GS owner's heart."

TAXVIEW FEDERAL IIGS

If there's such a thing as love at first sight in the world of tax software, TaxView Federal IIGS will steal a GS owner's heart.

With its pull-down menus, windows, dialog boxes, and mouse support, TaxView Federal is also startlingly WYSIWYG (what you see is what you get): Forms and schedules that appear on screen are identical to their IRS counterparts. And TaxView is the only program we know of that prints IRS-acceptable signature forms, including the 1040, 1040A, and 1040FZ. The program is powerful with a capital P, handling some 29 forms and schedules. To fill in a form, just click on a data area and type.

Unfortunately, all this elegance comes at a heart-breaking price— TaxView Federal IIGS takes more than six minutes to load, and that's lightning fast compared to its printing speed.

To generate a completed Form 1040EZ (the one that probably takes no more than a few minutes to fill out with a hand-held calculator and ballpoint pen) in IRS-acceptable, graphics mode monopolizes an ImageWriter II for more than 11 minutes. (Printing just the data on an original IRS form takes less than three minutes.) According to program documentation, it "may take several hours to print a complete, moderately complex tax return." TaxView could be the excuse you've

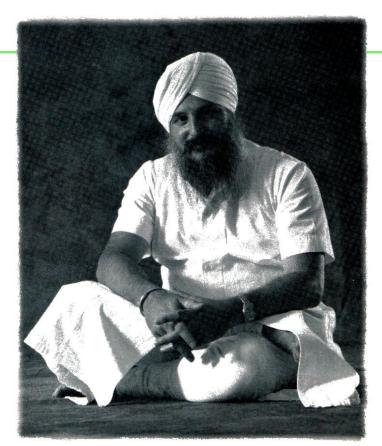

been waiting for to invest in a print spooler.

Despite its lethargy, TaxView is attractive and deserves consideration by GS users who are willing to sacrifice speed for the pleasure of working in the graphics environment.

READ MY DISKS

Once you've found a tax-preparation program that suits your style, you won't greet each New Year as the beginning of some sort of communal Death Row sponsored by the IRS. Depending on your final tally of miscellaneous Schedule A deductions and your adjusted gross income, you may even be able to coax Uncle Sam into underwriting the cost of this newest addition to your Apple II software library. Maybe revenge can be sweet.

esting information. CompuServe has members across the country and around the world. Thousands of people just like you, all interested in swapping ideas, solving problems, sharing information and making new friends. To join, call 800 848-8199 or see your computer dealer. But do it soon, because there's an awful lot of people waiting to meet you.

Come to AppleFest.

Come to experiment. Come to listen. Come to marvel. Try out a new program. Take home a bargain. Learn from a child. There are so many reasons to attend Apple-

Fest '89 in Boston's World Trade Center that you shouldn't come for just one of them.

Come for the whole bunch.

A gigantic exhibit area. Bigger and more exciting than ever, the expo at AppleFest '89 will feature thousands of products from more than 200 companies in the Apple II® and Macintosh® markets.

The best conference for Apple II and Macintosh owners. More than 75 sessions in all. The AppleFest conference program delivers information you can use: tips from desktop publishers, secrets of top AppleWorks® users, how to connect school and home computing, how to make the most of HyperCard®, desktop graphics, on-line services, and much, much more.

Three great reasons to register now.

Save money. Avoid the lines. And guarantee your place in the limited-seating AppleFest Half-Day Seminars.

Spreadsheet Billing System

Turn to AppleWorks' spreadsheet for tailor-made customer statements.

by Ruth K. Witkin

harges and payments determine the success of any business. If you run a small business and don't need a full-blown accounts-receivable program, look closely at this month's spreadsheet, which lets you send timely statements to customers and maintain internal records of accounts.

A small landscaping business called Nature's Garden uses the customer statement shown in **Figure 1**. Because the company does lawn and garden maintenance only, this spreadsheet's designed to handle services performed. With only slight modification, you can make it work equally well for products sold (as you can see in **Figure 2**).

Nature's Garden operates in three counties with three different sales-tax rates. The easy approach is to assign a number to each county, create a lookup table (shown in rows 45 through 47) containing the numbers and corresponding sales-tax rates, then use a lookup formula to select the proper rate. You'll learn more about this operation below, in the explanation of the spreadsheet's formulas.

A SPREADSHEET FROM SCRATCH

Use the AppleWorks Startup and Program disks to make a new file for the spreadsheet. Name this file STATE-MENT. You should now see the spreadsheet Review/Add/Change screen with the cursor in A1. Now use the following summary to start the spreadsheet.

Long lines. Enter a double line across row 16 in columns A through F: Place the cursor on A16 and type quotation marks; hold down the equal-sign key until the sign reaches the right edge of F16, and hit Return. Leave the cursor on A16, and copy the row to the clipboard: Press OA-C to start the Copy command; type T to select *To clipboard*, and press Return.

Next, copy the row containing the line from the clipboard into rows 18 and 30: Place the cursor on A18; press OA-C and type **F** to select *From clipboard*; now place the cursor on A30; again, press OA-C and type **F**.

Column width. Each column is now nine characters wide. Use the Layout command (OA-L), Columns option, and Col-

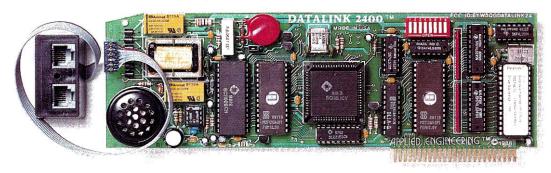

umn width option to adjust column widths as follows: Reduce columns A and B to five characters each; increase column C to 13 characters and column D to 21 characters; increase columns E and F to 11 characters each.

In the statement, column B provides a narrow column for the area numbers in the lookup table (rows 45 through 47).

Figure 1. AppleWorks spreadsheet designed as statement of services to customers.

The new DataLink 2400 modem from Applied Engineering, it's a <u>lot more</u> than just twice as fast.

Applied Engineering's new DataLink™ 2400. Simply put, the finest modem on the market for your Apple IIGS, IIe or II+.

Bring home a world of information . . . from up to the minute flight information to whole libraries of resource materials. Even download free software and games.

Twice the speed.

At transmission speeds up to 2400 bps (bits-per-second), Applied Engineering's new DataLink 2400 is capable of putting text on the screen faster than the human eye can follow. That means you can capture a great deal more material in less

time than with 1200 bps modems. And *unlike other modems*, the DataLink 2400 comes complete with powerful, easy-to-use communications software.

Complete communications software included.

Both our new DataLink 2400 and our DataLink 1200 modems feature AE's exclusive communications software—on disk and in ROM—everything needed to get you immediately up and running. Our powerful DataTerm software for the IIos and IIe supports VT-52 screen emulation, macros, file transfers, on-line time display, recording buffer and more. It even stores hundreds of phone numbers for auto-dialing and log on. And for II+ and 64K IIe owners, our OnLine 64 software has many of the same powerful features.

Worldwide compatibility.

The DataLink 2400 is fully compatible with Bell 103 and 212 protocols, as well as European protocol CCITT V.22 BIS, V.22 and V.21. It operates at varying transmission speeds from 0-300, 1200 and 2400 bps.

The new 2400, like our best-selling DataLink™ 1200, carries a full five year warranty and comes complete with two modular phone jacks for data and voice calls, a thoughtful feature that means fewer wires to connect. We also include an extra long telephone cable, in case your computer is across the room from your telephone jack. You can track the progress of calls either electronically or via on-board speaker. And built-in diagnostics reliably check transmission accuracy.

Prices subject to change without notice. Brands and product names are registered trademarks of their respective holders.

Packed with important features:

- · Non-volatile memory for modem configuration
- · Full Hayes AT compatibility
- Point-to-Point, ASCII Express, Access II compatibility, in addition to AE's included DataTerm and OnLine 64 software.
- Super Serial Card "Front End" for highest software compatibility (unlike others)
- · Adaptive equalization and descrambling
- · Hardware configuration for DSR and DCD
- · PC Transporter (MS-DOS) compatibility
- FCC certified design

\$204.90 in freebies.

We also throw in a nice collection of goodies—a free subscription to the GEnie network worth \$29.95, \$60 of free on-line time from NewsNet, a free \$50 subscription to the Official Airline Guide and a fee-waived membership to The Source worth \$49.95 plus \$15 of free on-line time.

That's \$204.90 worth of free memberships, discounts and

on-line time when you purchase the powerful DataLink 2400 at \$239.

DataLink 1200 reduced.

Loaded with all the features of the new 2400, (except CCITT, DSR/DCD and non-volatile ROM configurations) our 1200 bps DataLink modem, complete with software and freebies, is an affordable alternative at only \$179.

DataLink 1200	\$179
DataLink 2400	\$239

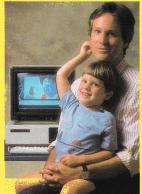

Order today!

To order or for more information, see your dealer or call (214) 241-6060 today, 9 am to 11 pm, 7 days. Or send check or money order to Applied Engineering. MasterCard, VISA and C.O.D. welcome. Texas residents add 7% sales tax. Add \$10 outside U.S.A.

PPLEWORKS

APPLEWORKS

In the invoice (Figure 2), it serves as a buffer between the right-justified numbers in column A and the left-justified labels in column C.

Short lines. Enter the short line in row 34: Place the cursor on F34 and type quotation marks; press the spacebar twice, type eight minus signs, and move the cursor to B44; type quotes, then 18 minus signs (to bring the sign to the right edge of C44), and hit Return.

Labels and other information. Referring to Figure 1, enter labels, letterhead information, statement date, customer information, promotional blurb, reference numbers, dates, services, payments, charges, and lookup table—in other words, everything but the numbers in E33, F32, F33, and F35, which the formulas generate. Cell A19 holds the area number: 1 means our hypothetical Mr. Wetherill lives in an area where the sales tax is 8.25 percent.

Before you start, read these few notes about cell locations and other matters to guide you along the way:

- 1) In D2 and A13, type quotation marks first to tell AppleWorks the street address is a label, even though it starts with a number.
- 2) In D4 type quotation marks first to tell AppleWorks the phone number is a label, even though it starts with a parenthesis.
- 3) In E10 type quotation marks before

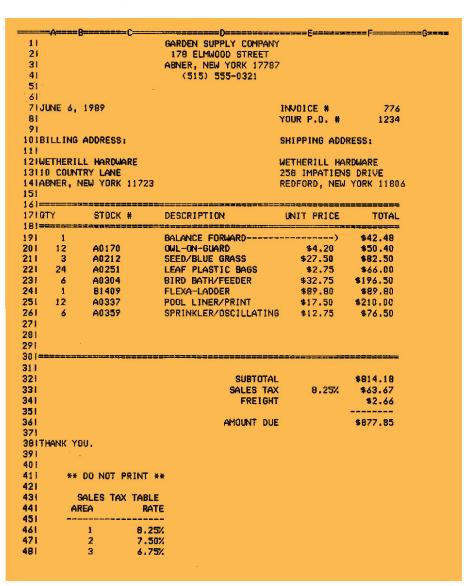

Figure 2. Statement converted to invoice for products sold.

**** JUNE SPECIAL ****.

4) In D19 type BALANCE FORWARD followed by 16 minus signs and a greaterthan sign (>). The arrow is a gentle reminder to enter the balance forward.

5) Type payments and charges without a dollar sign; when you format, Apple-Works will insert the dollar sign for you. 6) Type SUBTOTAL in D32, SALES TAX in D33, and AMOUNT DUE in D35. You'll be right-justifying these labels so that they look like the ones in Figure 1. 7) In the sales-tax table area, type ** DO NOT PRINT ** in B40 (type quotes first), **SALES TAX TABLE** in B42 (type quotes first and press spacebar twice), AREA in B43, and RATE in C43. (You'll right justify it shortly.) Type the rate numbers as decimals: .0825 in C45, .075 in C46, and .0675 in C47. They'll become percentages after you format their cells.

Don't bother to press Return after typing each entry. Simply move the cursor away from the cell to enter what you typed. After the last entry, hit Return.

Formats. Use the Value command (OA-V) to set a standard Value format of Dollars with two decimal places. Use the Layout command to reformat the following cells for Appropriate with zero decimals: F7, A19, and B45 through B47. Reformat the following cells for Percent with two decimal

places: E33 and C45 through C47.

Now for the labels formats: Center the letterhead in D1, D2, D3, and D4. Right justify PAYMENTS in E17, CHARGES in F17, SUBTOTAL in D32, SALES TAX in D33, AMOUNT DUE in D35, AREA in B43, and RATE in C43. Press OA-S to store all your work on disk.

Next, enter the formulas that perform your calculations. First, read how the formula works, then place the cursor on the cell receiving the formula. Move the cursor to the cell locations shown in the formula description and type everything else.

When the formula is complete, compare each character on your screen with the description here. If everything agrees, press Return. If something's amiss, press Escape and start again.

FORMULA 1: SUBTOTAL

Formula 1 adds the charges in column F, rows 19 through 29 (including the balance forward), subtracts the sum of payments in column E, rows 20 through 29, and enters the subtotal in F32. The formula includes the dashed line in row 30, which creates a solid range of cells. This lets you conveniently insert rows before row 30 if you need more room. This way, when you do insert rows AppleWorks will adjust the cell references in Formula 1 to include those rows.

Cell location: F32

Description: @SUM(F30.F19) -

@SUM(E30.E20)

FORMULA 2: SALES-TAX RATE

Formula 2 uses the LOOKUP function to enter the sales-tax percentage in E33. The formula first looks at the customertax area number in A19, then scans cells B45, B46, and B47 in the lookup table for the matching number. When it finds the proper number, the formula retrieves the tax rate from the corresponding cell in column C and enters it in E33.

Cell location: E33

Description: @LOOKUP(A19,B45.B47)

FORMULA 3: SALES-TAX DOLLARS

Formula 3 adds the numbers in column F, rows 20 through 29, then multiplies the result by the sales-tax percentage in E33 to produce the dollar amount of the sales tax in F33. The spreadsheet calculated the sales tax on the balance in F19 in the previous month, so it excludes that amount from this calculation. Again, you're including the line in row 30 in case you insert more rows for additional charges or payments.

Cell location: F33

Description: @SUM(F30.F20)*E33

FORMULA 4: AMOUNT DUE

Formula 4 adds the subtotal in F26 and sales tax in F27 to produce the amount due this month in F35.

Cell location: F35

Description: +F32+F33

Your results should now match those in **Figure 1**. Press OA-S to store the formulas on disk.

PROTECTING FORMULAS

After all that work, 'twould be a pity if you or someone else working on the spreadsheet changed the formulas accidentally, so protect them: Place your cursor on E32 (an empty cell) and press OA-L to start the layout command; type **B** to select *Block*; move the cursor to F35 and hit Return. Type **PN** (for *Protection Nothing*).

PRINTING THE STATEMENT

This statement is 66 characters wide and prints at the standard ten characters to the inch. Increasing the left margin positions it well: Press OA-O to bring up the Printer Options screen; type LM to select Left Margin and press Return; type .7 and hit Return again. Now increase the top margin: Type TM and press Return; type 1 and hit Return again.

A filename is inappropriate on a statement sent to customers, so change the *Print Header* setting from Yes to No: Type **PH** and press Return. All the other print settings are fine. Press OA-S to save your settings and return the spreadsheet to the screen.

Now turn on your printer. Leave the cursor where it is and press OA-P to bring up the Print screen. Press Return to confirm *All*, and press it again to identify the printer (or type a number, then Return).

Hit Return again to confirm one copy. The printer whirs and here's your customer statement.

PRINTING YOUR OWN STATEMENTS

When you print statements for customers, you want to be sure to exclude the lookup table. Simply define the print area ahead of time: Place your cursor on A1; press OA-P; and type R to Select Rows. Press OA-7 to jump the cursor to row 35; press the down-arrow key three times to extend the cursor's highlight to row 38; and hit Return. Hit Return two more times, and the printer produces a tableless statement.

CREATING A MASTER SPREADSHEET

Now imagine you're about to prepare a new statement. You have several approaches to choose from. You can type over the old information, but that's risky because you may miss a few numbers. You can blank out the old information, but doing this repeatedly is a bother.

The best solution is to create a master spreadsheet, copy it when you have new billing or a new customer, make your entries, then print one statement for your customer and another for your records if you don't have a copy machine. When you're done, you can delete the file. For the next customer, copy the master again and follow the same procedure.

Here's how to create the master spreadsheet shown in **Figure 3**. Leave the cursor where it is and give this spreadsheet another filename: Press OA-N, and the filename appears at the bottom of the screen (be sure you're using the blinking insert cursor); type **MASTER** so that the filename becomes *MASTERSTATEMENT* and press Return.

Next, blank out the customer information in A7 through C14: Place your cursor on A7 and press OA-B to start the Blank command; type **B** to select *Block*; move the cursor to C14 and hit Return.

Follow the same procedure, using *Entry* for single cells and *Block* for contiguous cells, to erase these entries: statement

number in F7; balance forward in F19; and, in one large block, reference numbers in column A, dates in column C, services in column D, payment in E24, and charges in column F.

The tax code is the only remaining bit of customer information. It's a good idea to leave it—the standard value on this spreadsheet is Dollars, but the format in A19 is Appropriate. Blanking a cell with a nonstandard format makes the format revert to the standard value, which means you'll have to reformat each time. It's easier to overtype.

All you need to do is change the promotional message (E10 through E14) from time to time. Press OA-S to store MASTERSTATEMENT on disk.

FROM STATEMENT TO INVOICE

It's easy to transform the statement of services performed by Nature's Garden into an invoice of products sold by the Garden Supply Company, as shown in **Figure 2**. All you'll do is change some labels and create a new formula in F20 to multiply quantity by unit price. The new formula appears as +A20*E20, which you then copy into F21 through F26, or as many more cells as you have items. A side-by-side comparison of **Figures 1** and **2** shows where you make changes.

Other ideas for customizing a statement or invoice include using the lookup table to hold sales taxes in other states, and modifying it into a table of freights or discounts. You can even merge a statement or invoice with a promotional message created on the word processor.

Next month you'll create another spreadsheet, this one calculating interest earned on any amount of money invested at any interest rate for as many years as you care to consider. A neat feature lets you see how long the money will last if you withdraw a constant amount annually—great for retirement planning.

Write to Ruth Witkin at 5 Patricia Street, Plainview, NY 11803. Enclose a stamped, self-addressed envelope if you'd like a reply.

Easter Parade

by Cynthia E. Field, Ph.D.

ooking for ways to enhance Easter or Passover celebrations this year? Look no further than your Apple II! Instead of depending on commercial card and party shops to supply you with invitations and decorations, try adding your own creative touch to the holidays. With a little cleverness—and perhaps a bit of cutting and pasting—there's practically no limit to the kinds of publications you can create: dinner menus, holiday placemats, personalized place cards, and decorative banners. Best of all, you can create these items with software you probably already own.

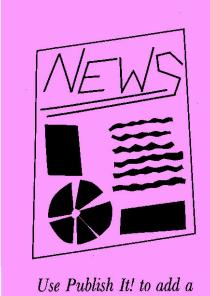

Broderbund's Print Shop and Print Shop GS let you create, among other items, cards, banners, and posters. Ditto for Print Magic from Epyx, a desktoppublishing program that offers strong layout capabilities and attractive graphics

illustrations.

Polarware's Electric Crayon Deluxe: **Holidays & Seasons** is another banner maker, but it also generates calendars and posters. Scholastic's SuperPrint lets you generate holiday or special-occasion creations such as placemats and giantsized decorative posters.

You can design stylish holiday-dinner menus with Claris' AppleWorks enhanced with fancy typefaces from Beagle Bros' TimeOut SuperFonts. Or try II Write or MultiScribe GS, two MacWritelike word-processing programs that have attractive fonts built in.

With page-layout programs, including GraphicWriter, Medley, AppleWorks GS, Personal Newsletter, Springboard Publisher, and Publish It!, your options are even wider. Besides publishing a holiday newsletter for your senior-citizens group or religious organization, you can create party announcements, banners, place cards, or dinner invitations.

personal touch to holiday affairs.

A RAINBOW OF COLORS

Even if your desktop-publishing program does support multicolor printing on the ImageWriter II, you might still opt for other, more attractive or creative choices.

Use continuous-form paper in "springlike" pastel colors, or ask your local copy center to duplicate your creations on one of the many kinds of paper stock he or she offers.

Some copy machines, such as Canon's personal copiers, use single-color toner cartridges, which let you duplicate publications in green, brown, blue, or red.

Likewise, instead of using a black ribbon in your printer, choose another color. Single-color ribbons-brown, purple, blue, and other hues—are available for popular printers from a variety of sources, including Ribbonland and Computer Friends.

Still other options exist: Prepare your

publications in black ink or toner on white paper and splash on color with wax crayons, oil pastels, color pencils, fine-tip markers, or watercolors.

Whatever the approach, using your Apple to design holiday creations and your favorite art medium to personalize them is an enriching way to let the whole family share in holiday-planning activities.

BE MY GUEST

Well before the banners go up and the table is set, you'll want to send invitations to your holiday dinner guests. Let's create a dinner-invitation card with Publish It!.

Start up the program and select Size to Fit mode. You can access this program feature, like many others, with easy-toremember, keyboard-equivalent commands. For example, Publish It! offers four page-viewing modes: close-up (Show Full Size), zoom (Show Double Size), half page (Show Half Size), and whole page (Size to Fit). Instead of using the mouse to select these options from the Special menu, become familiar with the equivalent commands: Open apple-1 through Open apple-4.

Once in Size to Fit mode, select the text tool and rubberband (hold down the mouse button and drag) the area taking up the bottom-right quadrant of the page as shown in Figure 1. Pull down the Objects menu and select Show Specifications (or press Open apple-M) to check your text object's dimensions. Use the accompanying Table, which lists the specifications for the dinner-invitation card, and refer to Figures 2 and 4 to edit your object's values correspondingly.

My invitation has a front panel and an inside-right panel; you'll create two separate pages to accommodate them. Be sure the text area you just created is activated; it should have "handles" in its

DOING MY TAXES **CAN BE FUN?** SURE. WITH 1040WORKS THE APPLEWORKS TAX PROGRAM

And it can save you time, too. For a fraction of the cost of conventional tax soft-ware, 1040Works and 1040Works-X templates convert AppleWorks to a comprehensive, low-cost tax-preparation program that calculates Form 1040, computes and prints Schedules A,B,C,D,E,F,R,SE; computes depreciation, employee expenses, childcare credit, alternative minimum tax, much more. Includes manual, financial organizer, utilities, and optional time-saving custom macros (for those of you with a macro program). Accepts data from financial management software.

HOW DOES IT WORK?

1040Works and 1040Works-X modules are data files that set up AppleWorks' spreadsheet as tax schedules and forms. Modules load like any other data file; no hardware or software modifications are needed. You just fill out the on-screen tax form. Both programs calculate each form, advance totals to later forms, compute your income and your tax and print out most schedules in IRS-approved format. Uses standard AppleWorks commands. Users tell us it's simple to set up and use, saves them hours of time - yes, it's even fun. Friendly support, too. in Cider magazine compared it to \$250 tax software. A+ magazine called it a bargain.

WHICH VERSION IS FOR ME?

It depends on your equipment. 1040Works requires an Apple II or compatible with at least 128K RAM and any version of Apple-Works. A printer is recommended. If you have a IIGS or other Apple or compatible with at least 256K RAM, you can use 1040Works-X, which takes advantage of the larger AppleWorks Desktop to do the job even quicker and more conveniently. (Runs with Three Easy Pieces on an Apple III comeven quicker and more conveniently. puter, too.)

HOW DO I ORDER?

To use your VISA or MasterCard, fill out the form below and then call our toll-free order number 7:00 am-5:00 pm (PST) weekdays:

in Washington State 800-527-7562

elsewhere in U.S. 800-245-8999

To order by mail, fill out the form and send it with a personal check (or money order). COD orders cost slightly more.

Table. Specifications for dinner-invitation card (all dimensions in inches).

corners. If it doesn't, select the pointer tool (the upward-pointing arrow at the top of the tool palette) and click on the text area.

Now select Copy from the Objects menu. Click on the right-arrow icon at the bottom left of the screen and add another page to your document.

With page 2 on display, select Paste from the Objects menu. A duplicate text area appears. Using the mouse, drag it into position in the bottom-right quadrant of page 2. For this and any other objects in this project use Show Specifications and the accompanying Table for precise positioning.

Save this file as CARD.A. Use the File menu option Save As or the quicker Open apple-A. This file, consisting of two identical pages with one text area each, is your basic template. You can use it to create fold-in-fourths thank-you cards, notecards, birthday greetings, or any other publication of this size.

JUST A FONT

Flip back to page 1 by clicking on the left-arrow icon in the lower-left-hand area under the tool palette. Switch to Show Half Size mode (Open apple-3) and

use the scroll bars to display the lowerright quadrant of your page.

Select the graphics tool and rubberband an area in the upper-left corner on top of the original text area. Insert a clipart disk into the data drive, pull down the File menu, and select Import Picture.

For this Easter-dinner invitation, I selected the "utensils" graphic from Timeworks' Symbols & Slogans clip-art disk. Publish It! 2 supports Print Shop graphics, a feature that lets you select from perhaps thousands of illustrations available at low cost or no cost in the public domain.

Use Show Specifications to orient the graphic. Add a frame by clicking on the Frame Border "radio button" in the Show Specifications dialog box.

If you want more freedom in moving a message around and playing with the position of its individual words, create a new text area with the text tool. Select the I-beam tool and position it inside this text area. Pull down the Font menu and choose Select Font.

For large text, I selected Kenilworth 36 (from the Font Pack 1 disk, available separately) and opted for Bold by checking that style under the Font menu.

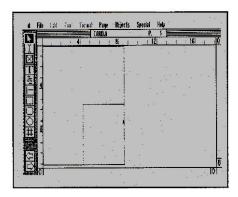

Figure 1. Basic template for invitation card.

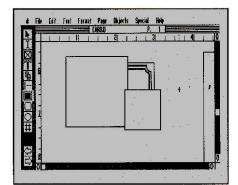

Figure 3. Use rectangles to "erase" parts of graphic.

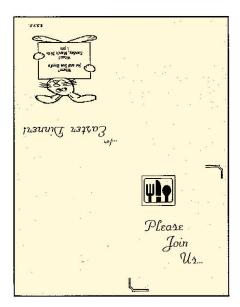

Figure 5. Completed invitation before folding.

Type each word (Please, Join, and Us...) on a separate line. Leave the word Please alone, because it's left-justified by

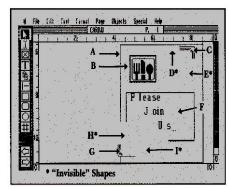

Figure 2. Screen shot page 1.

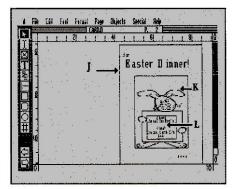

Figure 4. Screen shot page 2.

default. Drag the mouse across the word Join to highlight it, then select Justification from the Format menu. Click on the Center radio button. (Turn off the Use Page Standard feature.)

Highlight the word Us... and rightjustify it by using the appropriate radio buttons in the Justification dialog box (Figure 2).

A FIELD FUDGE FACTOR

I decided I wanted a border on the face of my invitation—not a full one, just "corners" like the stick-on photograph holders you see in scrap books. Unfortunately, none of the ready-made graphics suited me, but I devised my own

Create two graphics areas: one in the lower-left corner of the panel; another in the upper-right. Next, select the border pattern you like best. (I used one from Timeworks' People, Places & Things.) Import into both graphics areas.

Exploring Japan with Jet (Part 2)-SubLOGIC's Jet program now includes a free Japan Scenery Disk. Last month we took you on a guided F-16 tour of Tokyo.

This month we'll follow the Japanese coastline on a cross-country flight from Tokyo to Osaka. Starting from Tokyo International Airport (coordinates North 18201, East 32787), take off and turn to a heading of 220 degrees until you reach the coast. Turn to a heading of 235 degrees and fly for about twelve minutes at five thousand feet altitude until you can see Hamamatsu Airport below you (see Tokyo area chart). Turn right again to a heading of 305 degrees and fly to Nagoya; another highly detailed city. At Nagoya, turn left to a 240-degree heading that will take you straight to Osaka. When you find yourself flying over Osakajo Castle, begin your descent for a landing at Osaka International. This entire flight takes only twenty five minutes at Mach 1.4.

ThunderChopper Combat Mission #2 -You've completed flight, rescue and combat training missions in the Hughes 530MQ Defender helicopter. You've been battle tested under fire in Armed Escort. Now you're ready for Rescue at Sea.

A major sea battle is just winding down. You've been assigned to locate and rescue the survivors. You must search the wreckage carefully and stay on the alert for enemy ships. When you find a surviving pilot or crewman you will have to hover low over the water, lower your hoist and pull him to safety. You may return fire in defense if fired upon, but it's not a good idea to needlessly trade shots with enemy battleships. You will be evaluated solely on the number of survivors you are able to rescue and return to base for medical treatment.

Top Selling Scenery Disks This Month:

(\$24.95 each, for use with Flight Simulator II and Jet)

- 1. "Western European Tour" Scenery Disk
- 2. Scenery Disk # 7 (U.S. Eastern Seaboard)
- 3. Scenery Disk # 11 (U.S. North Eastern Border)
- 4. Scenery Disk # 3 (U.S. Southwest Pacific) 5. San Francisco Scenery Disk

Using the rectangle shape tool, rubberband rectangles over the parts of the graphic you want to obliterate. You'll need two rectangles to do the job. See Figure 3 and the Table for details.

But wait! You can see the rectangles, right? For now, keep them this way to make page editing easier. Later, before you print the invitation, activate each rectangle, choose Set Pen Pattern from the Objects menu, and click on the white square. That's right-make the rectangles invisible.

Turn to page 2 by clicking on the rightarrow icon. Select and position the Ibeam in the upper-left corner of the lower-right quadrant (the text area you originally created for your template). Select a font and type the rest of your message. I used Kenilworth 18 Plain for the word ... for and Kenilworth 36 Bold for the words Easter Dinner!.

Rubberband a graphics area approximately in the center of the panel. I selected the "billboard bunny" from the Symbols & Slogans disk. Using Publish It! 2, you can enlarge the graphic to the size shown in the **Table**.

Next, create a text area on top of the bunny's billboard. Place the I-beam in this area, select a font, and type the specifics about your get-together.

For this area, I used Barrington 12 Plain, a font included on the Font Pack 1 disk. I centered (Format menu) all information about the party's location, date, and time. Placing the I-beam tool in the bottom-right area of the panel, I added an R.S.V.P. message in Barrington 10 Plain (Figure 4).

Try different fonts and graphics and experiment with layout. Always remember, though, to save your progress at each important step along the way.

When you print your invitation, you'll get two pages, each with a completed panel in the lower-right quarter of the page.

If you need only a half-dozen or so invitations, print six copies of your invitation to generate 12 continuous sheets of printed pages. Remove the 12 pages as one continuous stack. Turn the packet 180 degrees and insert the last page you just printed. After you roll the paper into the printer, you should see the upsidedown "rabbit" panel in the upper-lefthand corner (Figure 5).

Now print six more invitations. Page 1 (with the "utensils") will print in the lower-right corner of the first piece of paper (creating the first complete invitation). Page 2 (with the "rabbit") will print in the lower-right corner of the second piece of paper (creating the second completed invitation). And so on.

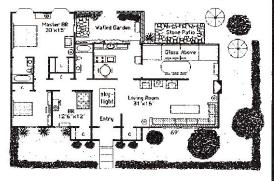

If your press run is larger, save wear and tear on your printer and duplicate the invitation on a copy machine. Make as many copies of page 1 (with the "utensils") as you need. Then turn these pages 180 degrees and reinsert them into the copy-machine feed bin. Copy page 2 (with the "rabbit").

Fold the invitations in quarters so that the utensils appear on the cover and the bunny appears on the inside right-hand page. That's all there is to it!

With page-layout programs such as Publish It! the sky's the limit. Start with paper, pencil, and ruler to set up the basic shape and size of your publication, then add text and graphics that meet your requirements. Use keyboard-equivalent commands to make your work even more pleasurable and let "invisible" shapes act as erasers for cropping artwork as needed. In no time you'll feel as I do that every day's a Field day when it comes to designing publications with your Apple II!

Cynthia E. Field is a free-lance journalist specializing in computer-related topics. She is a contributing editor and the author of Field Trip, inCider's column on educational software. Continued from p. 33

Is the system practical? For some, simply getting full value from a commercial package is enough reason to buy the FutureSound board. You can use it in a variety of ways, limited only by your creativity. You can even use sounds you've recorded in other programs. For instance, teachers and parents can write simple programs that help teach spelling, with FutureSound pronouncing the words or letters correctly as they appear on screen. You can also incorporate verbalized instructions in homemade programs. You can use music to provide positive reinforcement following a correct response or just as background to enhance a program.

Most music programs currently on the market can import digitized sounds, then let you modify them in any number of ways. Broderbund's Fantavision, for example, can import voice or music recorded by FutureSound to give a new and exciting dimension to the animation you create. And, of course, anything created by other programs-whether imported from FutureSound or not-will play back in full stereo for maximum enjoyment of HGS sound.

Applied Visions has given GS owners the future of sound now. The Future-Sound board is state of the art—but the best thing is that although users with a true grasp of musical concepts and programming can coax the most from it, even novices can benefit from what it has to offer. No matter what your level of expertise, you'll get your money's worth from this product. Applied Visions is making noise about the audio capabilities of the GS, and FutureSound is a board that demands to be heard.

Los Angeles, CA 90064

We know what you're thinking. A product that turns your Apple II into a slide projector? Come on, family slide shows are boring enough—there can't be much of a market for it. There's more to Slide Shop than meets the eye, though. Who wouldn't appreciate a greeting card with sound and graphics, for instance?

Make your brother's birthday unforgettable; liven up your next office party. You can put together presentations of up to 200 continuously running slides (screens). Add a PC Viewer overhead projector to present your show to large audiences. If you're into making home videos, you can use Slide Shop to make titles or record entire slide shows on your VCR.

CREATIVE JUICES

Slide Shop's easy to use, too. Commands (in pull-down menus) are logical and directions are simple. Except for an occasional reference, you'll hardly need the 128-page manual; a disk tutorial gives you all the intellectual ammunition you'll require to begin working on your own slide shows. If you have any problems, there's also an on-screen help feature.

To begin with, decide whether your slide will be graphics or text. Graphics slides are more impressive, but you can store more text slides on a show disk.

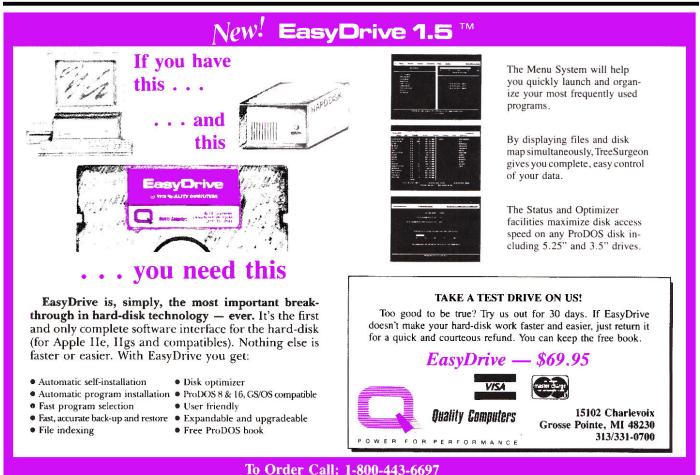

If you create a text slide, you can dress it up with a border from a library disk. Add music, sound effects (such as drums, a helicopter, or a train), or speech to jazz up your presentation. The program includes an undo feature, so making corrections is easy.

Your creative juices really begin to flow when you make a graphics slide. Besides adding borders and sound, you can also choose a graphics backgroundanything from a car-wash scene to a science class. Slide Shop comes with 72 clipart images. You can also import Print Shop graphics, or use anything you've created with any hi-res paint program.

Slide Shop incorporates many paintprogram features-such as brush, pen line, frame, block, and ring—so you can customize your slides. You can also fill in and color your drawing, copy any part of a slide and stamp it to another slide, move it within the same slide, or save it for use as clip art later.

SHOW TIME

What makes Slide Shop different from other graphics programs is its ability to string together "slides" in any combination you want. Just create a "script" describing their order of appearance. Forty different special effects add pizzazz and let you clear the screen and go on to the next slide. Set the interval between slides

for 1-29 seconds. You can also present slides manually, one at a time.

One particularly nice feature is that the program lets you create show disks, which contain whatever slides you prefer, but don't require the master program disk to run.

A printer option lets you make hardcopies of slides. Slide Shop supports most common printers and interface cards. (I used a vintage Gemini 10x with Graphstar interface card.) You can use this feature to create overhead transparencies or make copies of a particularly important slide for everyone in your audience.

Slide Shop is a versatile, simple-tooperate program that's more practical than you'd guess. Best of all, it's also a lot of fun.

Ken Carlson Ioliet, IL

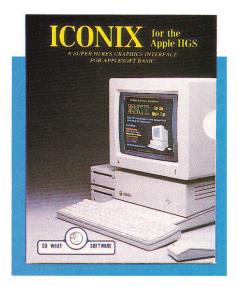

Picture Programming

ICONIX

So What Software, 10221 Slater Avenue, Suite 103, Fountain Valley, CA 92708, (714) 964-4298 Super-hi-res graphics-programming routines for Applesoft BASIC; 512K Apple IIGS, RGB monitor, printer \$39.95

Rating:

Many programmers who cut their teeth on Apple IIs have now upgraded to the HGS-but until recently, those GS programmers who use BASIC found that many things are just not accessible from standard Applesoft, most notably the machine's spectacular 256-color super-highresolution graphics mode. Now a product

called Iconix gives you access to the graphics abilities of your GS, as long as you're programming in Applesoft BASIC.

THE GRAPHICS ROUTINE

The Iconix machine-code module must be the first program you load into your GS. Once you've done that and the software has allocated the machine's memory successfully, you can begin creating programs that use this collection of graphics routines. Iconix covers five basic areas-screen and color, mouse, text, icons, and support programs, accessed through the Applesoft commands PEEK, POKE, and CALL. (Use CALL with each routine's entry address and PEEK or POKE with one or more data addresses.)

To control your super-hi-res graphics (SHRG) screens, use Iconix's clear-screen routine. Its format is simple—just POKE the color you want into the color-byte address, then CALL the clear-screen routine; Iconix clears your screen with the color you indicated. Normally you have a choice of 16 colors, but with a technique called dithering, you can get up to 256 apparently different colors or shades.

Another routine lets you fill a rectangular area of the screen with a specified color, good for simple windows or backdrops. A similar routine reverses the colors in a designated rectangular area. When repeated several times, it creates a flashing effect that draws attention to buttons or other types of selectors.

The other two screen routines BLOAD and display SHRG screens. The documentation suggests you load all screen or graphics data at the beginning of your program, but you can load them as needed within a program, as well.

TEXT AND ICONS

Iconix has two basic text functions: You can plot a single character on screen by POKEing the ASCII value of the character you want, along with the character's color and X-Y coordinates; to print a complete string of characters, you'll have to use the variable name SG\$ (reserved for that purpose by Iconix) to define the string, then POKE the color and position information and CALL the routine.

One routine reads your mouse's X-Y location and the status of the mouse button (whether or not you're pressing it). You can then pass these values to the mouse-cursor routine to place the pointer on screen or move it around.

Naturally, the major graphics object in Iconix is the icon. Icons are rectangular areas of the SHRG bit-map screen that you can copy from a background and paste to the current view screen. Using four icon-control routines (Open Icon, Put Icon, Pull Icon, and Close Icon) you can manipulate even large areas of the screen easily.

Perhaps the best feature of these routines is that when you place an icon on top of the screen, the software saves the area beneath it automatically and restores it when you remove the icon.

UTILITIES

Iconix comes with three utility programs designed to help you create or modify icon or color data. The first is the Icon Editor. It's not a graphics editor like the ones you'll find in paint programs. Instead it lets you design an icon sheet, an SHRG display containing the images you want to use in your program.

To achieve the maximum number of colors, Iconix's Palette Editor lets you define up to 16 color palettes for an SHRG screen. This color-palette information is stored in a special location on the SHRG screen, and is BLOADed and BSAVEd with the image.

The final utility is the SCB (scanline control byte) Editor, which specifies the palettes used by each part of the screen. With this utility, you can designate all 16 possible palettes to be used in a particular display, giving the picture a total of 256 simultaneous colors. You can also change the horizontal resolution (320 or 640 bits wide) to different values on the same screen.

PROGRAMMER'S CHOICE

For a long time, there was no way for the experienced Applesoft programmer to exploit his or her GS' super-hi-res graphics abilities without delving into the fairly complex Apple Toolbox routines. For taking care of that, So What Software should be commended.

For most programmers, however, Ico-

nix would be a vastly superior package if the routines were available in the form of commands with parameters instead of unwieldy PEEK, POKE, and CALL techniques, which offer little to the beginner or intermediate programmer.

Unfortunately for Iconix, there are now BASIC languages for the GS that offer direct support for many graphics routines-and they use easy-to-understand commands, not Applesoft's cryptic POKEs and PEEKs. And because these new BASICs are generally superior to Applesoft in other aspects, as well, they may be a better choice. All things considered, I recommend Iconix only to the "hard-core" Applesoft programmer who doesn't want to switch to one of the newer implementations of BASIC.

Warlock GS, Three-Sixty Pacific, Inc., 2105 South Bascom Avenue, Suite 290, Campbell, CA 95008, (408) 879-9144, \$39.95

Lafe Low plays..

Tis the season for arcade follies, fa la la la la, la la la la. Time for kids to get their jollies, fa la la la la, la la la la. It was December when we were working on this installment of Games Editors Play, and from the looks of things, kids across America (not to mention the kids at inCider) must have had a great Christmas. Arcade aficionados particularly had some great choices to satisfy their cravings.

One of the newer selections for action fanatics is Warlock. It's pretty slick. The theme is the standard "you against the evil whatever it is that threatens the world" that's central to so many fantasy role-playing games, but unlike other games, which take you deep into someone's imagination, Warlock lets you get right into blasting away at denizens of the underworld.

You're up against whatever grisly creature resides on the level you're

traveling through—all the while collecting magic objects, treasure, and whatever else you can find. You're armed only with a scepter that fires magic bolts—guaranteed to turn your foes into cosmic dust. Pick up the required eight magical objects, and you'll win the chance to do battle with the great evil It and save the world. Lucky you.

The world of Warlock looks (and sounds) as gruesome as the real thing (if there were the real thing). As soon as you start out, hordes of zombies crawl up out of the ground and start at you, so keep that scepter ready. On other levels you'll encounter ghosts, fire-breathing stone giants, piranhas, and a floating eye that can literally kill you with its looks. It's a scary place, but someone has to explore it.

...and plays...

Bubble Ghost GS, Accolade, 550 South Winchester Boulevard, San Jose, CA 95128, (408) 985-1700, \$34.95

Bubble Ghost is odd, yet it represents an interesting approach to arcading—guaranteed to captivate you. Rather than firing photon torpedos at space critters, you control a ghost who simply has to blow a bubble through a series of convoluted rooms and passageways. Piece of cake, you say? Wait.

You can spin your ghostly accomplice in any direction—even upside down-then blow the bubble with a long gasp or a short puff, depending on how far you want it to go. That may sound easy, but you have to negotiate this delicate floating bubble around corners and various other hazards.

In some of the rooms you won't get far unless you figure out how to disable a trap. For instance, in one room you have to blow into a switch to turn off a fan. In another, you have to blow out a candle before passing over it. In an even more bizarre room, you have to blow into a trumpet to get a statue to lie down, letting you pass.

Bubble Ghost is definitely not standard fare. Dazzling graphics and weird sound effects make the mazelike rooms look and sound like a bad dream. Should you puff too hard and pop the bubble, your friendly ghost loses his Casperish smile and shakes his fist at you. You start out with five bubbles, though, so you'll get another chance if you "blow it."

Arkanoid GS, Taito Software, 267 West Esplanade, North Vancouver, BC, Canada V7M 1A5, (604) 984-3344, \$29.95 (requires a mouse)

Should you buy Arkanoid? Take a quarter to the place in your neighborhood where the kids park their skateboards after school—the pizza parlor, the mall, or the arcade. Find the video games. Disperse the mob around the most crowded one, and you'll be sure to find Arkanoid.

Drop in your two bits, and bounce the silver ball off your rocket-shaped paddle against a wall of day-glo bricks. Enjoy the slick sound effects and bright colors as long as you can, because you'll eventually miss the silver ball and you'll have to insert another quarter to keep playing.

If you feel like spending another 25 cents, ask yourself, "Could I play Arkanoid 120 times?" If you answer, "Heck, I could play this 120 times on

my lunch hour" (as I did), then buy Arkanoid for the IIGS. It's the same furiously addictive game you've played in your local video arcade. After all, you already spent \$3000 for the computer. Now go home, leave the kids alone, and play.

...and plays...

Serve and Volley GS, Accolade, 550 South Winchester Boulevard, San Jose, CA 95128, (408) 985-1700, \$39.95

I play a good inner game of tennis. That means my outer game—the serve, backhand, forehand, lob, smash, topspin, and leap over the net—is bad. But I'm great at watching the pros on TV. I always know exactly what they should be doing. Serve and Volley is like that. It's a great tennis game for players who always know what they should be doing, but don't always have the skill to do it.

Serve and Volley is like a video arcade game-you can watch little tennis players running around the computer court. But I promise your opponent will smash you if you waste time watching the action. You need to monitor your position, your choice of shot, and your aim constantly. A small screen, inset in an upper corner of the game display, requires your undivided attention.

Accolade mastered the sports-game interface with bars and meters on Hardball! and Mean 18. One drawback, though, was that the interface made it too easy for your opponent to see what you were doing-Hardball! in particular required blindfolds, two joysticks, or more trust than I have in my friends. But Serve and Volley fixes that neatly: You're so busy concentrating on your game you don't have time to worry about watching the split screen in your opponent's corner.

Serve and Volley is complex—I played two games before I returned a serve—but tennis isn't simple, either. It's worth the inner effort.

Short Takes...

California Games GS

Epyx, P.O. Box 8020, 600 Galveston Drive, Redwood City, CA 94063, (415) 366-0606, \$44.95

Super graphics and radical music make the GS version of this old favorite cooler than ever. Surfing's the best, but you've also got half-pipe skateboarding, roller-skating, footbag, bicycle motorcross, and flying disk. The only things missing are sunburn and salt spray. (See Games Editors Play, February 1989, p. 90.)

Fourth and Inches

Accolade, 550 South Winchester Boulevard, Suite 200, San Jose, CA 95128, (408) 985-1700, \$44.95

If you're looking for elaborate simulations of intricate formations, this one's not for you. Fourth and Inches is a simple, fast-action arcade game; you can select plays and defenses, but that's as detailed as it gets. So far it's the best football game for the Apple II, though; ease of use, basic strategy, and entertainment go a long way here. (See Games Editors Play, February 1989, p. 90.)

Mini-Putt

Accolade, 550 South Winchester Boulevard, Suite 200, San Jose, CA 95128, (408) 985-1700, \$39.95

To the best putter go the spoils. Mini-Putt's four minimalist courses of nine holes each sport windmills and elephants in addition to rolling hills and deep lakes. It's not as whacky as Zany Golf, and the game screen's just a two-dimensional map, but it's a tougher athletic challenge all around. (See Games Editors Play, February 1989, p. 90.)

Skate or Die

Electronic Arts, 1820 Gateway Avenue, San Mateo, CA 94404, (415) 571-7171, \$39.95

Skate or Die's got all the "rad" happenings-twist and turn in a downhill run through the park, crank out some outrageous aerials in the half pipe, soar in the high jump. It's great to try all this stuff without worrying about losing your knees. Skate or Die will bring back a lot of memories-even if you never wore spiked leather gloves or a fuchsia mohawk. (See Games Editors Play, January 1989, p. 88.)

Tomahawk GS

Datasoft, 19808 Nordhoff Place, Chatsworth, CA 91311, (818) 886-5922, (800) 245-4525 (orders only), \$39.95

Tomahawk simulates the complex controls and intricate maneuvers required to fly an Apache attack helicopter. The game has plenty of authentic details, including especially realistic sound effects. (See Games Editors Play, October 1988, p. 106.)

Alien Mind

PBI Software, Inc., 1163 Triton Drive, Foster City, CA 94404, (415) 349-8765, \$54.95

Everything's out to get you as you blast your way through the corridors and levels of a space station. Along the way you log onto terminals to get clues and passwords from your friend, who's hiding somewhere deep in the station. Alien Mind is exciting action that will keep you occupied for a good long time. Joystick recommended. (See Games Editors Play, September 1988, p. 42.)□

Welcome to the Real World

by Cynthia E. Field, Ph.D.

sk, tsk. Here you are swigging Mylanta and grappling with the prospect of filling out your 1988 tax return, while your children contentedly play computer games. Thanks to the half-dozen programs reviewed here, you can now make economic interests a family affair and introduce kids to the "real" world. Don't worry—you won't be the family spoiler. Playing these educational games and simulations is entertaining in its own right, and an absolute blast compared to completing the dread Form 1040.

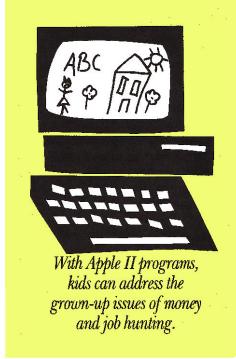

BASIC MONETARY SKILLS

Want to get a jump on things and teach your kids the value of money *before* they become teenagers? You can do it with **Money Works** from MECC.

Money Works includes four games: How Much Money?, Money Machine, Counting Change, and Money Mint. Unlike some other programs I've seen, this one lets children aged 6–9 explore the appearance and value of either U.S. or Canadian money and appreciate its worth—or lack thereof—in foreign currency.

In the first game, crack the safe and count the money inside. Each variety of coin or denomination of paper currency looks like its real-life counterpart: nickels like nickels, dimes like dimes.

The graphics in Money Machine, the second game, may remind you of the coin changers amusement-park attendants wear. The program displays a certain monetary amount in words or in numbers on screen. Match the amount by using the arrow keys and the spacebar to dispense look-alike money from the Money Machine. You'll have to be astute: There may not be enough quarters, so you'll need to dispense a combination of dimes, nickels, and pennies instead.

Counting Change, the third activity, uses the "money machine," too. In this game, you're a cashier. The program displays a picture of a familiar item, its cost, and the amount of money the "customer" has given you. You make the correct change.

Money Mint, the fourth game on disk, strays from the drill-and-practice scenarios presented in the first three. Design your own paper money by determining the visage it'll carry and its value. Move over, George Washington! In Money Mint, you can select the image of a white, black, or Asian child.

Moreover, you can see your currency's worth in English, French, German, or Japanese money. You can also print play money. Parents or an older brother, sister, or babysitter can use Money Works' built-in utility to enter current exchange rates for the pound, franc, mark, and yen. This feature alone could be a springboard for discussing a real or make-

believe trip and for getting the kids involved in planning it.

PROTECTING YOUR ASSETS

House-a-Fire! teaches an economic skill of a different sort: protecting home, hearth, and human life. This program, from E. Nelson Publishing, includes a database of information about, among other topics, Heat Transfer, Types and Causes of Fires, Firefighting Substances, and Leaving a Burning House. Learning or reviewing information contained in the database, children participate in two simulations: Make It Safe! and Firefighter!

Make It Safe! challenges you to avoid fire hazards as you move into your new, make-believe, two-story home. The program lets you furnish one or more rooms in the floor plan displayed on screen. Select and position your choice of graphics icons representing typical room furnishings: paper towels in the kitchen, a blow dryer in the bathroom, a computer in your bedroom. You might decide to place a fire extinguisher in the kitchen and maybe another in your living room, because of its fireplace.

When you're finished, the program assesses the home's fire safety. If your layout doesn't pass muster, fire breaks out. Even if your layout is safe, the program may generate a random fire. Try to put it out within the time limit or at least be sure to escape safely. Unlike real life, the program helps you undo the damage and learn to avoid fire hazards in the future.

The second simulation, Firefighter!, teaches you about the six tasks firefighters must perform before they attempt to extinguish a fire. Not only do you learn to recognize types of fires, but you also become more aware of the effects of weather on firefighting and the necessity of turning off utilities, including gas, water, and electricity.

House-a-Fire! is an educational program with highly practical, if not lifesaving, application. Use it as an impetus to beef up fire safety in your home. Otherwise, you could find yourself making an unpleasant entry relative to "casualties" on Schedule A.

CAVEAT EMPTOR

If you want to help your kids avoid getting "burned" in the figurative sense, take a look at MCE's Buyer Beware, the teenager's survival guide to avoiding consumer rip-offs.

This unique program offers illustrated, interactive tutorials in five areas: Doorto-door Sales, Consumer Complaints, Mail-Order Fraud, Teens as Victims, and Sales Techniques. Parents already know about exaggerated advertising and highpressure sales pitches. On the other hand, teens can be too trusting.

Kids learn business-management techniques with The Market Place from MECC.

Buyer Beware gives them consumer "smarts," including common-sense tips about handling salespeople and seeing through the mind games some of them play with their customers. The program includes information about protective legislation such as the "cooling off period" and explains your options when you want to file a complaint.

The section on Teens as Victims really hits home. It teaches young people how unscrupulous advertisers and salespeople can exploit kids' concerns about their looks and dreams for the future. If Buyer Beware helps your child avoid even one costly mistake, the program will have paid for itself.

FOR YOUNG ENTREPRENEURS

If your children aged 8-13 dream of someday making it on their own, The Market Place from MECC and The Cactus Factory from Exsym provide good basic training. Both programs are business-management simulations in which you don't have to worry about tax returns or Chapter 11 bankruptcy.

The Market Place's measured approach to teaching business skills involves

MODEM MGR®

plus \$3 ship/hand • plus tax (Calif. only)

- A powerful telecommunications program
- For Apple IIGS, //c, //e,][+
- Runs most internal and external modems
- Text capture and auto disk save
- Screen capture (snapshot)
- Full-screen editor
- Full- or split-screen display with type ahead (for CB, chat, packet radio)
- Macro script files for auto log-on
- Programmable function keys
- XMÖDEM and BINARY II file transfers
- Fast operation (110 to 19200 baud)
- Both ProDOS and DOS 3.3 support
- Supports Apple or Videx 80-column card
- On-screen display of time-of-day or elapsed time (with most clock cards)
- Unattended mode with password protection
- Emulates DEC VT52, DG D200, others NEW for IIGS, //c, 128k //e (ProDOS):
- ★ DEC VT220, VT100 emulation
- * Reverse scroll review
- ★ Message flagger for easy retrieval
- Available direct only. Send check to:

three types of retail businesses: Sell Apples, Sell Plants, and Sell Lemonade.

The object of Sell Apples is to determine optimum pricing for each piece of fruit. During your one-month stint as an apple hawker, you select various prices from 1–50 cents. Responding to the program's prompts, you calculate daily profits. The program transforms this cumulative information into a bar graph. Watch trends carefully, and you'll soon determine the price that has the best effect on your bottom line.

In Sell Plants, you move up in the world—your class has elected you business manager. Your job is to market the tomato plants the class grew as a science project. The goal is to make enough money for a field trip. Select a slogan, determine the number of signs to make, and use your math skills to help fill in the daily sales report on the computer screen.

Money Works teaches children the value of currency.

Sell Lemonade is the most complex simulation of the three on this MECC disk. Not only do you have to make business decisions about prices and signs, but you also have to determine how many glasses of lemonade to make each day.

Watch weather predictions and track

the progress of the road construction going on near your location. At first, your parents give you the sugar you need, but, like other venture capitalists, they expect your business to become self-sufficient. Your overall goal is to earn \$100, after expenses, of course. Because the program lets you operate up to three lemonade stands at one time, brothers and sisters, relatives, and friends can enter the competition.

An individual mogul-to-be or a group of young entrepreneurs can also turn to The Cactus Factory. The overall object of this simulation is to sell 20 cacti in a minimum amount of time by determining the variety of cactus and the type of flower pot customers like best.

The menu in this colorfully illustrated program provides a logical business plan:
Buy Seeds, Buy Pots, Grow Cacti, and
Sell Cacti. Seeds cost \$1 per package of

The complete statistical package with data management and graphs STATS: Easy to use, no commands to memorize (menu-driven); Descriptive Statistics, t-tests (independent and dependent samples). General ANOVA/ANCOVA (up to five factors, unlimited number of cases, Repeated Measures, unbalanced designs, contrasts, adjusted means, and more). Correlations, Multiple Regression (up to 15 predictors, unlimited number of cases). Crosstelyludgins, Straiffenger Tosts 10 Mag.

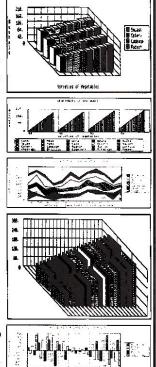

Repeated Measures, unbalanced designs, contrasts, adjusted means, and more). Correlations, Multiple Regression (up to 15 predictors, unlimited number of cases), Crosstabulation, Significance Tests, 10 Nonparametric Statistics, and more; user defined (multiple) conditional selection of subsets of cases, various ways of treating missing data; Flexible Data Editor, easy entering/editing of data, complex (conditional) transformations of variables, sorting, transposing, and more; can also access files created by spreadsheets (e.g. AppleWorks) and data bases.

GRAPHS (by Third Wave Techn., Inc.): Large selection of highest quality, impressive graphs (Column, Stacked column, 3-D stacked column, Horizontal bar, Line, Line, column, Scatter, Area, Pie chart, 3-D chart); User controllable legends, borders, titles, spacing, etc.; Up to 400 data points per graph; Double-high resolution, full colors; Mouse and joystick and over 60 printers supported (printout size up to 7" × 15")

Price for APP STATS & GRAPHS: \$99 (plus \$5 sh/h)

When You Need a *Real* Data Base Manager, Use a <u>Professional!</u>

"There's little doubt that DB Master is the most powerful database program available for the Apple II. It rivals, and even surpasses, sophisticated database programming languages in many ways."

- Apple IIGS Buyer's Guide, Winter '88

Software "All Star"

- A+ Magazine, December '87

"the database to beat all databases"

- InCider, June '88

"if you need power-this one really *moves*"

— InCider "Editors' Choice", July '88

"Librarians who work with gigantic files and need a more powerful data base than Apple-Works provides should look carefully at DB Master....Stone Edge has really pushed the Apple II further than most people ever thought it could go."

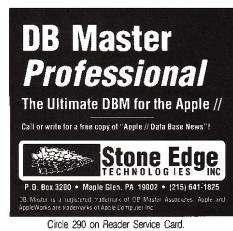

— Apple Library Users Group Newsletter, January '88

"I have access to AT's and DBase, Foxbase and all the rest, but for ease of use, versatility and speed, nothing, and I mean nothing, beats DB Master!"

- John LePire, president, JCL Services

"I received my copy of DB Master Version Five a few weeks ago and have been putting it through its paces. In a word, it's **great!** It puts to shame every other database manager I've ever used, and believe me, I've tried them all!"

- R.C., Grandville, Michigan

FIELD TRIF

five for all three cacti (Beavertail, Pincushion, and Woolly Torch), but planter prices vary: Plain ones set you back \$3 each; fancy ones, \$6! No matter, though, the right cactus in a fancy pot can bring in \$10.

The Cactus Factory provides on-screen business reports such as Daily Inventory and bar charts representing the number of cacti sold and your enterprise's cash flow. Successful proprietors enter the Cactus Factory Hall of Fame, a disk-based list of business standouts.

The Cactus Factory documentation deserves special mention for its "Cactus

Curriculum" activities. Though seemingly geared toward the classroom, these activities are nevertheless suitable for family discussions (free enterprise versus socialism, supply versus demand) and projects (a decision-making planner for purchasing a car). Three of the manual's reproducibles are shapes children can use as fabric patterns for creating soft-sculpture cacti.

WHAT DO YOU WANT TO BE?

Not yet realizing that a particular job doesn't have to be an irrevocable commitment, kids often agonize over what

Fielding Questions

The "New" GS

We just purchased an Apple IIGS for our daughter. I've inquired about some programs only to learn they won't run on the IIGS. Is this only because the GS hasn't been around as long as the lie and lic?

J.R., Amarillo, TX

Because the GS is a 16-bit machine and much more powerful, there are bound to be some misconceptions and fears about its compatibility with programs designed originally for 8-bit lis.

All but one or two of the educational programs I've seen have loaded and run properly on the GS. I, too, have heard "stories" of incompatibility, but I haven't found this to be a widespread problem.

If your dealer stocks a program you're interested in, ask him or her to let you try running it on an in-store GS or borrow a demo version, if available, to try at home. If you're concerned that your existing software may become quickly obsolete by upgrading to a GS, bring the software to your dealer and ask to test it. If you intend to order the program by mail, call the program's publisher and ask whether the software has actually been tested on the GS. Many of these publishers have toll-free numbers. 🗆

ads, fill out job applications, take part in an interview, and behave appropriately on the job.

The Right Job costs nearly \$200, so this probably isn't a product you'd purchase for your own home. Nevertheless, it's one you might suggest your school consider adding to its computer lab or lending library. (Sunburst lets schools preview this program and others in their catalogue free for 30 days.)

and teachers, it provides children with an opportunity to further expand their computing horizons.

Software

I LOVE N.Y.

You're a Manhunter in Manhattan, two years after aliens have invaded and conquered earth. "Thrust into a post-apocalyptic world, you must wear the designated brown robe and avoid conversation with other humans or face death," according to Sierra On-Line's (Coarsegold, CA, 209-683-6858) press release.

Authors Dave, Barry, and Dee Dee Murray created The Ancient Art of War for Broderbund; for Sierra they take the "Animated Adventure" technology responsible for the look of Leisure Suit Larry, Police Quest, King's Quest, and other games to its limit. Priced at \$49.95, Manhunter's fullcolor graphics - 250 scenes and gruesome sound effects fill four 31/2-inch disks. (Don't despair—it runs on your harddisk drive.) Circle Reader Service number 350 for more information.

Warlock is grisly fun. The first Apple IIGS offering from Three-Sixty (Campbell, CA, 408-879-9144) combines humor and arcade action in a game for the whole family.

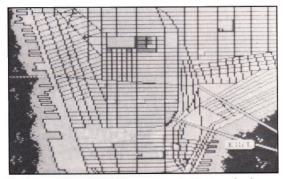

If you thought Friday the 13th was a funny movie, Warlock, priced at \$39.95, will have you rolling in the aisles. Imagine the slick graphics of Thexder combined with the wit of Leisure Suit Larry, and you've got a good idea of Warlock's looks.

'Save the Karna," using your head, your heart, and just a little hand-eye coordination. For details, circle number 352 on the Reader Service card.

SAY IT IN COLOR

After setting the standard for Apple IIGS paint programs with DeluxePaint II, Electronic Arts hopes to provide "the complete solution for papers and reports" with its new word processor, DeluxeWrite.

DeluxeWrite supports all Apple IICS type fonts, sizes, and styles on screen and in

Full-color graphics and gruesome sound effects make for an unforgettable trip to NYC in the animated fantasy Manhunter.

Turn in your scalpel: Optical Data offers bloodless dissection in its new videodisc slide collection, The Frog.

print. It's fully AppleWorks compatible, which means you'll keep all your Apple-Works formatting commands if you choose to compose with AppleWorks and print with DeluxeWrite. It also has a 90,000-word spelling checker.

But the greatest strength of DeluxeWrite is its easy integration with DeluxePaint II. Your word-processor documents can include any DeluxePaint image, including clip art. You can resize and crop the images for the best fit in your document, and use all the original colors from DeluxePaint II.

DeluxeWrite sells for \$79.95; the "DeluxeWrite/ DeluxePaint II combo" is only \$129.95, from Electronic Arts, San Mateo, CA, (415) 571-7171. For additional information, circle Reader Serivce number 354.

KERMIT **EXCLUDED**

Don't dare dissect? The Frog, the latest addition to the Living Textbook videodisc series from Optical Data (Warren, NJ, 201-377-0302) does the job bloodlessly.

The Frog is a collection of more than 200 slides and 34 movie clips stored on two sides of a videodisc. Material covers embryology, development, and anatomy of the frog, and includes films of frogs in their natural habitat. For biology classes that go ahead with dissection experiments, there are also detailed instructions.

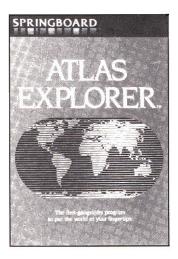

The Frog videodisc costs \$195; it's also available for \$395 in an Interactive Multimedia Package that adds an image directory on either an AppleWorks database file or a Macintosh HyperCard stack. Contact the company, or circle Reader Service number 355 for more information.

AROUND THE WORLD

Could you find Maputo on the map? Americans know too little about the world. At teachers' conventions across the country, the hot topic is geography.

Atlas Explorer, from Springboard Software (Minneapolis, MN, 612-944-3915) is like an atlas on disk, and its quizzes and games make geography fun. It works on two levels: first as a digital reference work, and second as a programmed learning experience. Teachers can replace the traditional geography class with Atlas Explorer, or simply use it as an ancillary reference work.

Atlas Explorer costs \$49.95 for the Apple IIc, IIe, and IIGS. A lab pack is also available for \$100. For more information, see if you can find number 356 on the Reader Service card.

Your Apple's your ticket to exotic lands as Atlas Explorer takes you around the globe.

DOWN AND OUT IN CHIBA CITY

You can be a Neuromancer when you play the first cyberpunk computer game. The plot of this fantasy role-playing adventure, created by the guys who brought you Wasteland and Bard's Tale, is lifted from William Gibson's best-selling sci-fi novel of the same name.

You're a cyberspace cowboy on the skids in Chiba City. That is, you're a professional computer hacker in the 21st century, when everything's done on a mega on-line network, and you're out of work. This one requires brains and skill. And it wouldn't hurt to read the book first, either.

Neuromancer from Interplay Productions (Costa Mesa, CA, 714-549-2411) costs \$44.95 and includes the original soundtrack by Devo. For more information, circle Reader Service number 351.

NEW WISHES

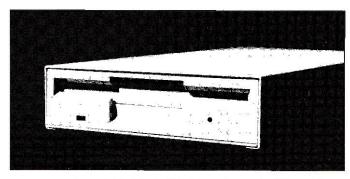

- •Mathematica (Wolfram Research): a "whole new way of doing mathematics with a computer." But you need a Mac II with megabytes to show
- AccuWeather (AccuWeather): on-line weather maps from the same people who probably report the weather for your local radio station—if you have a Mac or IBM PC. But look for the National Geographic Society's "educational" on-line weather maps in April.

Hardware

DISK DATA

Here are the facts about the SystemGate M300 3½-inch, 800K floppy disk:

- •The M300 measures an inch high, four inches wide, and less than eight inches long. (Apple's is 2 by 5 by 8 inches.)
- •The M300 works with the Apple IIGS, Apple IIc Plus, and the Laser 128EX/2, alone or in daisychain with other drives (just like Apple's drives).
- •The M300 is warranted for one full year (Apple's drives

SystemGate's M300 3½-inch disk drive takes on Apple's popular model in the mass-storage marketplace.

for 90 days).

- •The M300 doesn't have an "eject" button; you have to remove the disk by software or paper clip. (Apple's disk has a button.)
- •The M300 costs \$259. (Apple's costs \$425.)

Get a disk drive (and a paper clip) from SystemGate, Monterey Park, CA, (818) 282-4720, or circle number 353 on the Reader Service card.

Resources

THE FUTURE IS NOW

Stewart Brand, founder of The Whole Earth Catalog, takes a tour Inside the Media Lab (Viking Penguin, New York, NY, 212-545-7433) at the Massachusetts Institute of Technology. All the nifty "technology of the future" is here today in this \$10 paperback: holography, talking computers, computer music and art, artificial realities, and first-graders programming robots with Logo and Lego. You'll need to be a knowledge navigator to find your way through Brand's excited, wandering prose; it's nonlinear. But the pictures are worth ten bucks.

For more information, circle Reader Service number 357.

APPLEWORKS GOES TO SCHOOL

The AppleWorks Resource Guide for Teachers and Parents, priced at \$12.95, might interest some students, too. It's a comprehensive list of more than 125 AppleWorks templates— AppleWorks disk files in which useful information has already been entered.

Jim Carlisle, founder of the Teachers' Idea and Information Exchange and the country's foremost template collector, was a major contributor; Claris Corporation (Mountain View, CA, 415-960-2790), publisher of Apple-Works, produced this official guide to AppleWorks for education. Call the distributor, Scholastic Software, at (800) 631-1586, to order, or circle Reader Service number 358 for more information.

Product descriptions contained in this section are based on information supplied to us by the respective manufacturers. These announcements are provided solely as a service to our readers and do not constitute endorsement by inCider of any given product.

Apple Macros

Apple users know there's always an easier way to get the job done. A shortcut here, an elegant twist there—that's what Hints/Techniques is all about. It's an information swap for readers who want to share their programming pointers, DOS tips, hardware secrets, AppleWorks applications, and all those other insights. Bracketed numbers in listings refer to new Applesoft Program Proofer, p. 24.

Apple Macros

by Andy Haas

Wish your Apple II had definable function keys? Now you can create your own macros with the accompanying programs, Macro Driver (Listing 1) and Apple Macros (Listing 2). You'll reduce keyboard activity by defining 16 control keys capable of reproducing up to 31 characters each.

Type in **Listing 1**, SAVE it, and RUN. Then type BSAVE Macro.Driver,A\$9300, L\$300 to save the binary program and macro-definition file the program creates. Be sure to use that name, because **Listing 2** looks for it.

Now type in, SAVE, and RUN Listing 2. Apple Macros is the editor you use to personalize the macros you define in Macro Driver.

After a brief pause, during which Apple Macros BLOADs Macro Driver, you'll see a list of macro keys followed by their character-output definitions. The program prompts you to press the key corresponding to the macro you want to edit.

Next, type in any Applesoft or ProDOS command as the macro's definition, such as LIST for the macro Control-L. Press C to clear all macro definitions if you want to start with a clean slate. Press Q to quit, and use the macros you saved most recently in subsequent programs. Once installed, you'll now have a collection of commands waiting at your fingertips.

While listing definitions, be aware that

Listing 1. Macro Driver defines keystroke equivalents.

RamFactor

The Ultimate Slot 1-7 Memory Card

KamFactor is automatically recognized as additional workspace memory by Apple-Works 1.3, 2.0 and 2.1. In addition, Ram-Factor's memory can be used for creating the ultimate in program speed—a lightning-fast RAMdisk for the Apple IIcs, IIe, II+, Franklin and Laser 128. A RAMdisk does not depend on the slow moving parts of a conventional floppy drive. RAMdisks eliminate wear and tear on your disk drive plus your programs run up to 20 times faster! When a program is in RAM, your computer won't have to search for it in the mechanical disk drive during program operation. With RamFactor, you can have up to 9 seperate simultaneous RAMdisks-even in different operating systems! Now you can instantly switch from one program to another or even switch from AppleWorks to DOS 3.3 to CP/AM to Apple Pascal 1.3 to ProDOS.

Apple Memory Expansion Card Compatible

RamFactor is 100% Apple Memory Expansion Card compatible. This means that software designed for Apple's card is automatically compatible with RamFactor. Thousands of software programs—including AppleWorks, Pinpoint, MacroWorks, MultiScribe, and Managing Your Money—can take advantage of the speed and performance RamFactor provides. But with Apple's card, you can have only one RAMdrive partition instead of the 9 simultaneous RAMdrives that RamFactor offers. And that's only part of the story . . .

2.0 AppleWorks Power

Other slot 1-7 cards can give AppleWorks a larger desktop, but that's the end of their story. RamFactor provides many more powerful functions. It's the only slot 1-7 card that increases AppleWorks 2.0 internal limits by increasing the maximum number of records in the database to 22,600, increasing the maximum number of lines permitted in the word processor to 22,600, and expanding the clipboard size to 2,250 lines maximum. RamFactor is the only standard slot card that will automatically load all of AppleWorks into RAM, dramatically increasing speed and

eliminating the time required to access the program disk. It will even display the time and date on the AppleWorks screen with a ProDOS clock. RamFactor will automatically segment large files so they can be saved on multiple 5¼" and 3½" floppies or a hard disk. All this performance is available for the Apple IIe, Laser 128, Franklin or 64K Apple II Plus when used with an 80 column card. No other standard slot card comes dose to enhancing AppleWorks so much.

The "Electronic Hard Disk"

RamCharger is an optional battery back-up device, (about the size of a disk drive), that can plug into a connector on Ram-Factor. With Ram-

Charger added to RamFactor, your program will appear almost instantaneously when you turn on your computer. RamCharger contains LED's that let you know RamFactor's reserve pxwer status. Since RamCharger has its own built-in power supply, it can retain RamFactor's memory indefinitely. Plus, RamCharger's battery will continue backing up RamFactor's memory for up to 10 hours during power failures. An optional "Y" cable is also available that allows one RamCharger to power two fully expanded RamFactors.

If 1 MEG Isn't Enough

A 4 MEG RamFactor Expander can be plugged into the expansion port on Ram-Factor for up to 5 MEG's total. RamFactor Expander uses standard 1 MEG chips and can be expanded in 1 MEG increments. With the addition of RamCharger, both RamFactor and the expander will provide up to 5 MEG's of lightning-fast battery backed storage.

Features

- Compatible with Apple IIGS, IIe, II+, Franklin and Laser 128
- 256K to 1 MEG on main board with 256K

- memory chips; expansion port supports up to 5 MEG with Expander option
- 100% Apple Memory Expansion Card compatible
- RamCharger battery back-up option available for permanent storage
- Reduces power strain to internal power supply with RamCharger option
- Fully socketed and user upgradeable
- Expands internal limits of AppleWorks 2.0
- Automatically recognized by ProDOS, DOS 3.3, Apple Pascal 1.3 and CP/AM
- Built-in RAMDrive software (true RAMdisk not disk caching)
- · Graphic memory test included
- Allows Apple II+ to run AppleWorks 2.0 without buying additional software
- Automatically recognized by AppleWorks 1.3 and 2.0
- Fits in any I/O slot except slot 3
- 5 year warranty parts and labor
- · Proudly made in the U.S.A.

Macro Driver records all keys except Control-H (left arrow), Control-U (right arrow), and Control-M (Return) as output. Use a backspace-arrow key combination to delete errors.

To install your macros in other programs without using the Apple Macros editor, simply BRUN MACRO.DRIVER, which reserves two control keys as commands. Press Control-Q or use the IN# or PR# command to deactivate Macro Driver and reset your Apple to its standard state. Type CALL 37632 to reactivate it. Press Control-] to switch the two entry modes: Mode 1 allows for more input after each macro entry, while mode 2 sends a carriage return. Macro Driver defaults to mode 2. Each time you press Control-], you'll hear a chirp-like sound. If mode 1 is active you'll hear it once, otherwise twice.

Macro Driver is located at \$9300-

The Sider™ Storage Solutions

It seems like it happens year after year. The leading publications to the Apple II marketplace, in product reviews and round-ups, single out First Class Peripherals and *The Sider* for special praise.

This year, the accolades read like this:

1 INDEPENDENT MASS STORAGE SUPPLIER.

1988 APPLE II USERS BRAND PREFERENCE STUDY

1988 READERS' CHOICE AWARD, STORAGE PERIPHERALS.

A+ MAGAZINE

1988 "DREAM MACHINE" SELECTION, HARD DISK STORAGE.

A+ MAGAZINE

"ALL TIME BEST" / TOP TEN APPLE II HARDWARE PRODUCTS.

INCIDER MAGAZINE, DECEMBER 1988

We think the reason is simple enough. Value. The Sider gives you more reliable hard disk, tape and tape/disk combo subsystem hardware, more capacity choices, easier-to-use software, comprehensive documentation, and on-line help and diagnostics, and warranty protection. We give you smart-looking packages with

Listing 3. Auto Quit.

\$95FF. To use those memory locations for other purposes, it's important to deactivate Macro Driver with Control-Q to avoid hanging or crashing your system. When you first install it, Apple Macros prevents BASIC, DOS 3.3, or ProDOS from interfering with these locations. ■

Write to Andy Haas at 313 East 9th Avenue, Coal Valley, IL 61240.

Auto Quit

by Harold D. Portnoy

Auto Quit (**Listing 3**) converts any binary program to a ProDOS .SYSTEM file containing the quit code that passes control directly to another designated system file. If you place your newly created .SYSTEM program as the first file in the volume directory, ProDOS will execute that program immediately after bootup.

The Sider™ Storage Solutions

The PRICES.

minimal desktop footprints and, now, six-foot cabling that lets you put *The Sider* out of sight for a zero desktop footprint. And we give all of it to you for prices that, as you will see on the right, are praiseworthy indeed.

Converting a binary file to a .SYSTEM file is easy. Just RUN the program in Listing 3 (AUTO.QUIT) and follow the onscreen directions. Auto Quit first requests the name of the machine-language program you want to convert, then asks you to name the newly converted program. Lastly, it asks for the name of the .SYSTEM file that will run after yours is finished.

Write to Harold D. Portnoy at 1431 Woodward, Bloomfield Hills, MI 48013.

Got a hint of your own? inCider would like to see it. If we can use it in Hints/Techniques, we'll buy it from you. Send your tip to inCider, Elm Street, Peterborough, NH 03458.

Give your family the gift of music.

End

Did you know that the AppleIIcs is a musical instrument in disguise? It can make up to 15 sounds at one time. And for as little as \$119, you and your family can begin making music.

The Pyware™ Music Writer will allow your family to learn about music, or if they already know music, let them create compositions up to 32 staves. (There are three levels for the beginner to the professional.)

With the **Pyware**[™] **Instrument Designer**, your family will not only learn about sound but will be able to create infinite tones with the Apple IIcs ensoniq sound chip. From acoustic instruments to your original sounds, Instrument Designer is an educational and fun program.

SHAREWARE CONNECTION

Diversi-Copy by Bill Basham

Copy your 3.5- and 5.25-inch diskettes at lightning speed! Single or multiple drive copies. Although not required, uses memory-expansion for single pass copying...Any Apple II.

Diversi-Cache by Bill Basham

Boost your Apple 3.5-inch disks (not UniDisk 3.5) to RAM disk speed without the hassle of loading and saving to a RAM disk! Even doubles the write speed under ProDOS...512K IIGS with at least one 3.5-inch drive.

• Diversi-Key by Bill Basham

Add macros and mouse functions to all your Apple programs. A complete collection of Appleworks 2.0 macros and mouse functions provided. And add your own...Apple IIGS.

ProSel by Glen Bredon

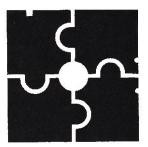

Hard disk drive salvation: Program selector and utilities in one simply elegant package. Use mouse or keyboard to choose applications, or copy files and disks. ProSel also features advanced ProDOS tricks for recovering and reconstructing lost files...Any ProDOS-compatible Apple II.

• Rx by Glen Bredon

The perfect antidote for viral infections! Detect viral infections in your ProDOS programs. Protect your system and programs...Apple IIGS or 65802-Apple Ile/c.

• Z-Link by Dave Whitney

Everything you'd expect in an excellent modem communication product: capture buffer, terminal emulation, split-screen chat mode, etc. Includes X- and YMODEM and soon-to-be-released KERMIT and BINARY-II transfer utilities... any ProDOS-compatible Apple II with Super Serial or compatible interface.

Get Your Share of the Best!

Thousands of economical, no-frills applications and enhancements are out there ready to help you get more from your Apple. Let the inCider Shareware Connection link you to the best.

What's The Connection?

- Software selected for excellence by inCider's editors
- Toll-free, easy ordering
- Product mailed direct from the author
- Virus-free
- Automatic registration for updates and upgrades
- Squirt-16 by Steven Stephenson

He's done it again: A super-fast selector/ launcher for any Apple II-executable file including EXEC text files. Complete program catalog, run list, auto-boot, on-line help and single key-stroke selection continue the highly successful Squirt tradition... IIGS only.

• PathFinder by Randy Brandt

You'll never have to memorize or type in a pathname for AppleWorks again! This musthave enhancement lists all subdirectories and AppleWorks files for easy selections... Any Apple II with AppleWorks version 2.0/2.1.

PatchMania by Randy Brandt

Skip entering a date into AppleWorks; re-order your file lists; pre-load only your favorite application; and much more!...AppleWorks 2.0/ 2.1 enhancement collection for any Apple II.

 Late Nite Patches by Randy Brandt Add MouseText to your AppleWorks menus; manage several directories at once; load ASCII and DIF files from a catalog list; and more! . . .

AppleWorks 2.0/2.1 enhancement collection for any Apple II.

• MiniPaint by Randy Brandt

This low-priced paint system for the IIGS rivals the big guys! Full-screen, 320- and 640-mode color with high-speed brushes, auto-shadowing, special pen modes, fat-bits, lasso, and much more...512K Apple IIGS.

JumpStart by Dave Hill

Launch any program, even EXEC a text file with a "click" using this state-of-the-art IIGS program selector. Menu-bar options also include: boot from any slot (slot 5, drive 2!), unlimited program selection list, text file dump, dish utilities, a print buffer, and much more. Self-installing . . . 512K IIGS only.

• Squirt by Steven Stephenson

No more pathnames! A single key-press selects your next application from a disk catalog menu. Memory-resident for instant access; compatible with all ProDOS versions... Any ProDOScompatible Apple II's.

The Quarter Mile

A hot arcade-style MATH game for ages 5 thru idult. Whole numbers, fractions, percents and more: Just watch 'em line up to play!

- It's a fast moving, animated 6-lane drag race (like video arcade games), complete with smoke, screeching tires and screaming engines.
- The drag strip scrolls down the screen faster and faster as the engines wind out and the dragsters accelerate.
- Your dragster gains speed each time you answer a math problem correctly.
- Your competitors (in the other 5 lanes) are exact video images of your own best 5 races replayed exactly as they occurred - screeching tires and all!

ORDER TOLL FREE 800-331-8125

pple IIGS users, including all of us here at *inCider*, have probably waited more eagerly for Applied

Engineering's **TransWarp GS** than for any other third-party product (P.O. Box 5100, Carrollton, TX 75011, 214-241-6060, projected to sell at \$399). With the colossal size of today's 16-bit programs, the machine has been in desperate need of something to rev up operations.

Now the GS has its own accelerator card—a new engine that boosts program speed two and a half times, from 2.8 megahertz to 7. Think it's a bit pricey? Wait 'til you see it perform. Folders and icons open from the Finder like lightning; text wraps instantly around graphics in your favorite desktop-publishing program; documents scroll at a reasonable rate in any graphics-based word processor. "TransWarp makes the GS as good as the Mac, because it's fast and it's still in color," declares Technical Editor Bill Kennedy.

Installation's straightforward-even easier than plugging in the He Trans-Warp, because you won't be fooling with DIP (dual in-line package) switches. Inserting the board adds a classic desk accessory automatically to your array of GS tools, as you'll see when you press Control-Open apple-Escape to bring up the Control Panel. You can configure Trans-Warp (determine whether you want the startup graphics and sound), perform a self-test, and adjust the speed. You can even disable the card, though why you'd want to is beyond us, unless you can't keep up with your favorite arcade game anymore. There's also an interrupt-logic option that runs AppleTalk on your GS.

"Applied Engineering's RamWorks memory-expansion cards transformed the Apple IIe into a serious machine by fixing its most obvious fault—a mere 128K of RAM (random-access memory)," recalls Senior Editor Paul Statt. "The most obvious fault of the GS is its 2.8-megahertz microprocessor: It's slow.

When you install TransWarp GS, you literally rip out that poky old 65C816 and replace it—but you won't miss it any more than you missed the old 80-column card on your IIe."

"Once I started using the original TransWarp in my old IIe, I found I couldn't do without it," adds Review Editor Lafe Low. "TransWarp GS promises to be equally indispensable."

"You're probably thinking, 'I just paid more than two grand for my IIGs. Why should I spend another \$400 on an accelerator card?' " observes Editor in Chief Dan Muse. "Unless you enjoy looking at watches and spinning wheels on your GS' screen, though, TransWarp GS will be the best \$400 you ever spent."

Every month, hardware and software manufacturers release dozens of new products into the Apple II market. Editors' Choice singles out one product each month that the inCider editors feel is a significant addition to the Apple II family of products. Products evaluated in Editors' Choice are among the most recent releases and may not be available yet for retail distribution.

I can't afford a tax return that isn't accurate. Neither can you.

I prepare tax returns. Lots of them. So I considered buying tax software for my computer. But when I found that most professional packages cost well over \$1,000, with a hefty annual charge to match, I was a bit surprised. For an investment like that, I'd seriously consider staying with my service bureau.

"Then I saw an ad for HowardSoft's Tax Preparer""

I was skeptical. First, Tax Preparer only costs \$295, and updates are less than \$100 a year.

Second, I know that a lot of people use Tax Preparer to do their own personal taxes. So when I read that the same software was supposed to do the job for us pros, I had to put it to the test.

I plugged in the numbers for one of my toughest clients. We have to file Form 8582 for this

guy. He's got real estate, limited partnerships, bank accounts for his kids ... you name it.

Getting started was simple. My computerphobic partner and I did it on the first try.

But the big surprise came when I found out we didn't have to complete any passive worksheets. In fact, we didn't have to enter *anything* on Form 8582 ourselves, or even tell the computer we needed it! Instead, Tax Preparer generated it automatically.

Its execution of the Passive Activity Rules was nothing short of brilliant. When I did it by hand I had to calculate the whole return with and without the passive activities to get it right. Tax

Preparer transfers hundreds of numbers among IRS forms, and recomputes AGI as often as necessary to get an accurate return. Automatically. It all happened so fast, I almost missed it. And the results were clear, and right to the penny.

Next, I gave it a return that even had the \$1,000 packages confused last year. In fact, the IRS had to issue Special Announcement 88–38 to show people how, if you have an IRA

HowardSoft, Tax Preparer, Tax Preparer: Partnership Edition, Tax Preparer: California Edition, and Real Estate Analyzer are trademarks of Howard Software Service; 18h0 of International Business Machines Corporation; Apple of Apple Computer, Inc.

deduction, you have to compute the taxable part of social security *twice* to get the right result. Howard-Soft was way ahead of these guys. Their software performed flawlessly.

Tax Preparer even understood about limiting investment carryovers to 17.5% of the total carryover, long before IRS Announcement 88–52.

I tried everything to trip it up. It blocked illegal combinations of dates, methods, and recovery periods from my depreciation entries. It kept my itemized lists accurate to the penny, but rounded to the dollar on the form, just like the IRS says to do. It even cross-referenced my supporting statements to the forms they supported, automatically.

"HowardSoft's attention to detail made all the difference."

I was impressed. So impressed, I bought it. And I've used it all year, both to prepare returns, and to plan taxes using its built-in projections into the 1990's.

So, look. You can keep fooling around with a service bureau. Or you can pay five to ten times as much for software with no more tax knowledge. Or you can even chance one of those cheapies if you plan to do the complicated calculations yourself.

But why risk it? Just fill out the coupon, or

pick up the phone and call HowardSoft. Get the tax software that gives you just what you need, at a price you can afford.

Tax Preparer by HowardSoft.

Affordable Ways To Enter The Computer Age.

If you're looking for an Apple® or Apple-compatible, Laser 128® computers offer you exceptional performance in every category.

Including price.

All cost less than the new Apple //c Plus. All run the full library of Apple //e and //c programs—over 10,000 titles. And all come with extra "built-in" features.

InCider magazine called our LASER 128EX® "a fully loaded, souped up...computer...at a price that should make Apple blush for shame." It runs three times faster than a //e and has a built-in expansion board for up to 1MB of memory—perfect for Appleworks.®

Our LASER 128EX/2™ surpasses even the

Apple //c Plus. You get a ProDOS®-compatible realtime clock, MIDI interface for musical instruments, your choice of a 51/4" or 31/2" internal disk drive, and the ability to daisy chain drives just like a IIGS.®

Finally, there's our LASER 128, the original Apple-compatible. It's so popular, it's now in hundreds of thousands of homes nationwide.

See your LASER dealer today. Call 312/540-8911 (West Coast 503/690-8086) for the one nearest you. Or write LASER COMPUTER, 550 E. Main St., Lake Zurich, IL 60047.

You'll discover more than a way to enter the computer age for less. You'll discover some of the best the age has to offer.

LASER 128, LASER 128EX and LASER 128EX/2 are registered trademarks of LASER Computer, Inc. Apple, Apple //e, Apple IIGS and ProDOS are registered trademarks of Apple Computer, Inc. Appleworks is a trademark licensed to CLARIS Corporation.
